## Contents

<i>Preface</i>	<i>page</i> xiii
<i>Frequently used notation</i>	xv
<b>1 Basic notions</b>	1
1.1 Processes and $\sigma$ -fields	1
1.2 Laws and state spaces	3
<b>2 Brownian motion</b>	6
2.1 Definition and basic properties	6
<b>3 Martingales</b>	13
3.1 Definition and examples	13
3.2 Doob's inequalities	14
3.3 Stopping times	15
3.4 The optional stopping theorem	17
3.5 Convergence and regularity	17
3.6 Some applications of martingales	20
<b>4 Markov properties of Brownian motion</b>	25
4.1 Markov properties	25
4.2 Applications	27
<b>5 The Poisson process</b>	32
<b>6 Construction of Brownian motion</b>	36
6.1 Wiener's construction	36
6.2 Martingale methods	39
<b>7 Path properties of Brownian motion</b>	43
<b>8 The continuity of paths</b>	49

viii	<i>Contents</i>	
<b>9</b>	<b>Continuous semimartingales</b>	54
9.1	Definitions	54
9.2	Square integrable martingales	55
9.3	Quadratic variation	57
9.4	The Doob–Meyer decomposition	58
<b>10</b>	<b>Stochastic integrals</b>	64
10.1	Construction	64
10.2	Extensions	69
<b>11</b>	<b>Itô’s formula</b>	71
<b>12</b>	<b>Some applications of Itô’s formula</b>	77
12.1	Lévy’s theorem	77
12.2	Time changes of martingales	78
12.3	Quadratic variation	79
12.4	Martingale representation	79
12.5	The Burkholder–Davis–Gundy inequalities	82
12.6	Stratonovich integrals	84
<b>13</b>	<b>The Girsanov theorem</b>	89
13.1	The Brownian motion case	89
13.2	An example	92
<b>14</b>	<b>Local times</b>	94
14.1	Basic properties	94
14.2	Joint continuity of local times	96
14.3	Occupation times	97
<b>15</b>	<b>Skorokhod embedding</b>	100
15.1	Preliminaries	100
15.2	Construction of the embedding	105
15.3	Embedding random walks	108
<b>16</b>	<b>The general theory of processes</b>	111
16.1	Predictable and optional processes	111
16.2	Hitting times	115
16.3	The debut and section theorems	117
16.4	Projection theorems	119
16.5	More on predictability	120
16.6	Dual projection theorems	122
16.7	The Doob–Meyer decomposition	124
16.8	Two inequalities	126

*Contents*

ix

<b>17</b>	<b>Processes with jumps</b>	130
17.1	Decomposition of martingales	130
17.2	Stochastic integrals	133
17.3	Itô's formula	135
17.4	The reduction theorem	139
17.5	Semimartingales	141
17.6	Exponential of a semimartingale	143
17.7	The Girsanov theorem	144
<b>18</b>	<b>Poisson point processes</b>	147
<b>19</b>	<b>Framework for Markov processes</b>	152
19.1	Introduction	152
19.2	Definition of a Markov process	153
19.3	Transition probabilities	154
19.4	An example	156
19.5	The canonical process and shift operators	158
<b>20</b>	<b>Markov properties</b>	160
20.1	Enlarging the filtration	160
20.2	The Markov property	162
20.3	Strong Markov property	164
<b>21</b>	<b>Applications of the Markov properties</b>	167
21.1	Recurrence and transience	167
21.2	Additive functionals	169
21.3	Continuity	170
21.4	Harmonic functions	171
<b>22</b>	<b>Transformations of Markov processes</b>	177
22.1	Killed processes	177
22.2	Conditioned processes	178
22.3	Time change	180
22.4	Last exit decompositions	181
<b>23</b>	<b>Optimal stopping</b>	184
23.1	Excessive functions	184
23.2	Solving the optimal stopping problem	187
<b>24</b>	<b>Stochastic differential equations</b>	192
24.1	Pathwise solutions of SDEs	192
24.2	One-dimensional SDEs	196
24.3	Examples of SDEs	198

<b>25</b>	<b>Weak solutions of SDEs</b>	204
<b>26</b>	<b>The Ray–Knight theorems</b>	209
<b>27</b>	<b>Brownian excursions</b>	214
<b>28</b>	<b>Financial mathematics</b>	218
28.1	Finance models	218
28.2	Black–Scholes formula	220
28.3	The fundamental theorem of finance	223
28.4	Stochastic control	226
<b>29</b>	<b>Filtering</b>	229
29.1	The basic model	229
29.2	The innovation process	230
29.3	Representation of $\mathcal{F}^Z$ -martingales	231
29.4	The filtering equation	232
29.5	Linear models	234
29.6	Kalman–Bucy filter	234
<b>30</b>	<b>Convergence of probability measures</b>	237
30.1	The portmanteau theorem	237
30.2	The Prohorov theorem	239
30.3	Metrics for weak convergence	241
<b>31</b>	<b>Skorokhod representation</b>	244
<b>32</b>	<b>The space <math>C[0, 1]</math></b>	247
32.1	Tightness	247
32.2	A construction of Brownian motion	248
<b>33</b>	<b>Gaussian processes</b>	251
33.1	Reproducing kernel Hilbert spaces	251
33.2	Continuous Gaussian processes	254
<b>34</b>	<b>The space <math>D[0, 1]</math></b>	259
34.1	Metrics for $D[0, 1]$	259
34.2	Compactness and completeness	262
34.3	The Aldous criterion	264
<b>35</b>	<b>Applications of weak convergence</b>	269
35.1	Donsker invariance principle	269
35.2	Brownian bridge	273
35.3	Empirical processes	275

*Contents*

xi

<b>36</b>	<b>Semigroups</b>	279
36.1	Constructing the process	279
36.2	Examples	283
<b>37</b>	<b>Infinitesimal generators</b>	286
37.1	Semigroup properties	286
37.2	The Hille–Yosida theorem	292
37.3	Nondivergence form elliptic operators	296
37.4	Generators of Lévy processes	297
<b>38</b>	<b>Dirichlet forms</b>	302
38.1	Framework	303
38.2	Construction of the semigroup	304
38.3	Divergence form elliptic operators	307
<b>39</b>	<b>Markov processes and SDEs</b>	312
39.1	Markov properties	312
39.2	SDEs and PDEs	314
39.3	Martingale problems	315
<b>40</b>	<b>Solving partial differential equations</b>	319
40.1	Poisson’s equation	319
40.2	Dirichlet problem	320
40.3	Cauchy problem	321
40.4	Schrödinger operators	323
<b>41</b>	<b>One-dimensional diffusions</b>	326
41.1	Regularity	326
41.2	Scale functions	327
41.3	Speed measures	329
41.4	The uniqueness theorem	333
41.5	Time change	334
41.6	Examples	336
<b>42</b>	<b>Lévy processes</b>	339
42.1	Examples	339
42.2	Construction of Lévy processes	340
42.3	Representation of Lévy processes	344
<b>Appendices</b>		
<b>A</b>	<b>Basic probability</b>	348
A.1	First notions	348
A.2	Independence	353
A.3	Convergence	355
A.4	Uniform integrability	356

xii	<i>Contents</i>	
A.5	Conditional expectation	357
A.6	Stopping times	359
A.7	Martingales	359
A.8	Optional stopping	360
A.9	Doob's inequalities	361
A.10	Martingale convergence theorem	362
A.11	Strong law of large numbers	364
A.12	Weak convergence	367
A.13	Characteristic functions	370
A.14	Uniqueness and characteristic functions	372
A.15	The central limit theorem	372
A.16	Gaussian random variables	374
<b>B</b>	<b>Some results from analysis</b>	378
B.1	The monotone class theorem	378
B.2	The Schwartz class	379
<b>C</b>	<b>Regular conditional probabilities</b>	380
<b>D</b>	<b>Kolmogorov extension theorem</b>	382
