- Arizona State University Dental Anthropology System (ASUDAS), 1, 24–7, 279, 299  
 Arizona State University, Tempe (ASU), 23–4
- Basque dental morphology  
   Caucasoid dental complex, 306–7  
   dentition records, 298  
   distance analysis, *vs.* world samples, 301–2  
   distance analysis, Western Eurasian populations, 303  
   genetic distinctions, 296–8  
   linguistic isolation, population origins, 296–7  
   primitive, derived dentitions, 307–8  
   research conclusions, 308–9  
   research discussion, 305–8  
   research materials, methods, 298–9  
   research results, 299–305  
   tooth crown, root morphology, 299–305  
   Western Eurasian populations compared, 302–3
- Brothwell, Don, 22
- Campbell, Thomas Draper, 49
- Carabelli trait, 56–7, 115, 472  
   accessory cusps, correlations, 82–4  
   model background, 69–72  
   research discussion, conclusions, 84–7  
   research samples, materials, methods, 87–8  
   UM1s, antimeric and metamer variation, 78–80  
   UM1s, intercusp spacing relative to crown size, 72–8  
   variation across populations, between sexes, 80–2
- Copenhagen Zoology Museum, 27
- Daubert v. Merrell Dow Pharmaceuticals*, 512
- Dental Anthropology* (Brothwell), 22
- dental phenomics, 40
- dental wear effect, crown morphology studies  
   causes, 535–6  
   LM2 cusp number, 544  
   research caveats, future directions, 548–9  
   research discussion, 545–8  
   research materials, methods, 540–2  
   research results, 542–5  
   study of, 535–6  
   tooth wear result(s), 536–40  
   UC distal accessory ridge, 542–4  
   UI1 shoveling, 542  
   UM2 hypocone, 544–5
- Dentition and Palate of the Australian Aboriginal* (Campbell), 49
- environmental factors, 28–9, 38, 132–4  
   biochemical/physiological characters, geographic clines, 110–11  
   buccolingual crown diameters, MNS blood group system, 114  
   Carabelli trait, Kidd blood group system, 115  
   character complexes, dental and biochemical/physiological, 111–17  
   mesiodistal crown diameters, ABO blood group, 112–13  
   mesiodistal crown diameters, haptoglobin-alpha, 113–14  
   morphological characters, evolutionary background, 117–21  
   previous studies, study premise, 109–11  
   shoveling, lactase activity, 115  
   shoveling, Rhesus blood group system, 114–15  
   study summary, conclusions, 121
- European Middle Pleistocene populations,  
   dental morphology accretion model, 201  
   recent studies, 202  
   research discussion, 213–17  
   research materials, methods, 202–3  
   research results, 203–13
