 - of Einstein solid, 81
 - of fluid
 - at constant volume, 116

- heat capacity (*cont.*)
 of ideal Bose gas, 131
 of ideal Bose gas and condensate, 139
 of ideal classical solid, 69
 of ideal Fermi gas, 116, 120
 of ideal gas
 at constant volume, 24
 of ideal solid, 69
 of paramagnet, 94
 of two-level system, 93
- ideal Bose gas
 condensate of, 133–136
 critical occupancy of, 132
 critical temperature of, 132
 entropy in two-phase regime, 135
 entropy of, 128
 equations of state of, 129
 ground state of, 130
 heat capacity of, 131, 139
 low temperature limit of, 129
 multiplicity of, 127
 occupancy of, 126
 thermodynamic instability of, 133
 third law compliance of, 135
 two-phase regime of, 133
- ideal classical solid, 67–70
 relative entropy of, 70
 single particle partition function of, 69
- ideal Fermi gas, 110–118
 entropy of, 113
 equations of state of, 114
 extensivity of, 120
 ground state of, 117
 ground state pressure of, 118
 heat capacity of, 116, 120
 multiplicity of, 111–112
 occupancy of, 113
 of conduction electrons, 119
 of electrons in white dwarf stars, 119, 121
 of nucleons, 119
 third law compliance of, 116
- ideal gas, 66–67
 and occupation number method, 66
 classical versus quantum, 136–137
 entropy of, 24
 equations of state of, 53, 57
 mixing, 73
 of diatomic molecules, 73
 relative entropy of, 25, 27, 53, 57, 67
 Sakur-Tetrode entropy of, 76
- independence of isolated subsystems, 41
 indistinguishable particles, 75, 84, 105, 118
- information and entropy, 143–144
 intrinsic semiconductor, 107
 energy equation of state, 109
 entropy of, 108
 multiplicity of, 108
- Jaynes, E. T., 156
 Joule expansion, 12–13, 45
 Joule, James, 19
- Kelvin, Lord, *see* Thomson, William
- laws of thermodynamics, 32
 Lorentz, H. A., 42
 Loschmidt, Johann, 4
 Loschmidt's paradox, 4
- Mach, Ernst, 33
 macrostate, 34, 47
 improbable, 38
 maximum entropy
 principle of, 154, 156
 use in occupation number method, 60
- Maxwell, James Clerk, 47
 Maxwell's demon, 47–48
 Maxwell-Boltzmann distribution, 64–65, 101
 microcanonical ensemble, 103, 154
 microstate, 34, 47
 classical, 45, 53
- missing information, 144, 145, 146, 159
 and statistical physics, 153–156
 in Einstein solid, 144
- multiplicity, 36, 51
 and entropy, 39
 of ideal Bose gas, 127
 of ideal Fermi gas, 111–112
 of ideal gas, 57
 of intrinsic semiconductor, 108
 of Shottky defect, 87
- negative temperature, 90–93
 experimental realization of, 92–93
- Nernst, Walther, 72
- occupancy
 critical value for ideal Bose gas, 132
 of ideal Bose gas, 126
 of ideal Fermi gas, 113
- occupation number method, 60–66,
 71, 110, 118
 applied to ideal classical solid, 67
 applied to ideal gas, 66
 maximizing entropy in, 62–63

- paramagnet, 88–90
