

THE NILE AND ANCIENT EGYPT

The tale of human habitation of the Nile Valley is a long one; it includes famine, disaster, global environmental events and human resolve told against a background of ever-changing landscape. In this volume, Judith Bunbury examines the region over a 10,000-year period, from the Neolithic to the Roman conquest. Charting the progression of the river as it meanders through the region and over the ages, she demonstrates how ancient Egyptians attempted to harness the Nile's power as a force for good. Over the generations, they learned how to farm and build on its banks, and also found innovative solutions to cope in a constantly evolving habitat. Using the latest theories and evidence, this richly illustrated volume also provides a blueprint for the future management of the Nile.

Judith Bunbury is Senior Tutor at St Edmund's College, Teaching Associate in the Department of Earth Sciences and member of the MacDonald Research Institute at the University of Cambridge. She has worked on several major sites in Egypt, including the temples at Karnak and the Giza pyramids.

Introduction	1
1 Humans and Climate Change: How Past Peoples Can Inform Our Responses to Landscape and Climate Change	2
2 The Green Deserts: Lakes and Playas of the Saharan Wet Phases	14
3 The Climate Seesaw: The Balance between Hunter-Gathering and Farming in the Wadis and Marshes of the Nile Valley	39
4 The Development of Egypt's Capitals: Condensation of the Nile into Meandering Channels with Inhabited Levees	56
5 Climate Change and Crisis: Differing Views of Devolution across the First Intermediate Period	63
6 Islands in the Nile	77
7 The Flood and the New Delta	93
8 Renewed Strength in the South: The Rise of Thebes (Karnak) and Management of the Minor Channels of the Nile	102
9 High Tides of Empire: The New Kingdom to the Roman Period – Development of Large-Scale Nile Water Management	118
10 From Coptic to Islamic Times: A Well-Documented Movement of the Nile from Al-Fustat through Babylon	131

II Modern Changes to Egypt: Dams and Irrigation: Can We Ever Control the Nile?	140
Appendix: Landscape Interpretation Tips	147
Glossary	159
Bibliography	165

FIGURES

1.1	Ancient Egyptian timeline	page 9
1.2	Diagram to show how landscapes changed with time in the main habitats of Egypt	10
2.1	Middle Kingdom jars: part of a large group excavated at the workshop at Quartz Ridge in the Gebel al-Asr region	16
2.2	Aestivating snails (<i>Zooteucus insularis</i>) from the Old Kingdom surface at Gebel al-Asr	17
2.3	Global temperature change during the Holocene from Greenland Ice Sheet Project Core 2	17
2.4	Diagram to show how climate changes with latitude and how the northern and southern Hadley Cells dry the desert regions, bringing rain to the tropics	18
2.5	Contemporary vegetation map of North Africa	20
2.6	Map of the main Egyptian oases and the two spillways that feed them from the Nile Valley at times of very high Nile	22
2.7	The temple at Ain Amur	24
2.8	Traces of worm feeding trails within the basin sediments at Wadi Bershama	24
2.9	Traces of fossil roots (rhizocretions) in the surface water sandstone of the Nubian Sandstone Formation at Wadi Bershama, Kharga Basin	25
2.10	Sediment remains that reveal the locations of ancient playa lake beds in the Sahara Desert	27
2.11	Large grindstones (c. 50 cm long) that are still in situ in Dolfin Playa	28
2.12	Selection of tools identified as typical of the sixth millennium BC found captured by sediment at Dolfin Playa	29

2.13	Characteristic giraffe panel from Aa Rock in the Kharga Basin showing tethered giraffes led by men	30
2.14	Fossilised tree stump associated with archaeological remains dated to the period 5800–5300 BC	30
2.15	Enclosure on high ground near Fish Rock, thought to be the remains of a lakeshore dwelling similar to those found at Nabta Playa and in the Farafra Oasis	31
2.16	Section through the Neolithic terrace at Wadi Gamal, Merimde Beni Salama	33
2.17	Sketch reconstruction map of the Merimde area during the Neolithic habitation	34
2.18	Sample of plaster from the Church at ‘Ain Lebakh in the Kharga Basin	35
2.19	Erosion of Roman wall from a well in Wadi Bershama near Kharga	37
2.20	Dried up lake bed in the Sahara Desert shown one year after rain	37
3.1	Vegetation in modern Peruvian wadis showing how we imagine the wadis around Hierakonpolis during the heyday of the site	45
3.2	Pre-Dynastic wadi catchments reconstructed by Dufton (2008)	46
3.3	Dufton’s (2008) reconstruction of the way that the Nile has migrated around Abydos	47
3.4	Large rhizocretions from the terraces of the Arkin Formation at Hierakonpolis	48
3.5	Example sediment log from augering (ASo1) from Nekhen (later known as Hierakonpolis) near to the Old Kingdom Temple	49
3.6	Landscape reconstruction of the Hierakonpolis area over the past 6,000 years	50
3.7	Proposed pattern of river movements for the Edfu floodplain since the Pre-Dynastic	51
3.8	Sketch curve (after Goudie and Wilkinson 1977) to show how increasing rainfall affects erosion rates in an arid environment	52
3.9	Section after Branton (2008) and Senussi and Jones (1997) showing how tongues of sand intrude the silts of the Nile Valley in the Giza area as wadis are denuded of vegetation and sediment collapses	53
3.10	Loading ramp for the Cephren diorite Quarry at Gebel al-Asr	54
4.1	Diagram to show the effect of a rainy episode on habitat	58
4.2	Map of small marginal lakes in the Abusir area reconstructed by Erin Earl (2010)	61
5.1	Mud-brick tunnel leading from the Valley Temple of the Bent Pyramid at Dashur	65

LIST OF FIGURES xi

5.2	Microscope images of sand grains from Memphis	66
5.3	Sketch map to show a reconstruction of the environment around Memphis at the time of the composition of the Tale of Sinuhe	69
5.4	King destroying Seth, from the Ptolemaic Temple of Edfu	71
5.5	Map of the area around the modern village of Lisht from which the Nile is far distant	72
5.6	Sketch map of the capital zone of Egypt showing the main sites of administrative control	73
5.7	Under cover of a round of golf, Angus Graham and the team investigate a sandy bank that crosses the Mena House Golf Course at Giza	75
6.1	Schematic diagram to show how rivers meander and where islands form in the channel	79
6.2	Diagram to show the best-fit migrations of the Nile in the Giza area over the last 5,000 years	81
6.3	Diagram to show how, at certain points where the Nile canyon narrows, the river is constrained to flow through a relatively narrow gap	83
6.4	Late Pre-Dynastic king depicted wielding a hoe preparatory to breaching a dyke and thus ceremonially commence irrigation	84
6.5	Diagram showing how the Nile River meanders within the Nile Canyon	86
6.6	Pattern of roads and field boundaries redrawn from a typical Egyptian village	86
6.7	Map to show the landscape in the Hermopolis–Antinoupolis region	87
6.8	Aerial photograph of the temples of Karnak, Luxor	89
6.9	Mansour Boraik’s excavation outside the First Pylon at Karnak in 2008	90
6.10	Excavation by Salah El-Masekh showing the northwards continuation of the waterfront wall in Figure 6.9	91
6.11	Maps to show how Karnak, now c. 500 m from the Nile, was initially founded on an island	92
7.1	Photograph of the Palestrina Mosaic showing the various activities and landscape of the Nile Delta in the first century BC	94
7.2	Global average sea-level curve showing how there was a steep rise in sea level after the end of the last ice age that slowed around 6,000–7,000 years ago	95
7.3	Diagram to show the environments encountered during (A) the large-scale crevassing stage of delta development, and (B) the meandering stage	96

7.4	Diagram to show how the LSC, predominant before 2000 BC, fostered abundant, well-fed and well-connected settlements, while the transition to meandering channels after 2000 BC favoured the development of larger settlements at the nodes of the delta distributary system	97
7.5	Drawing after tomb relief of cattle herders arriving at the Old Kingdom Tomb of Ptahhotep at Saqqara, west of Memphis	100
8.1	Myrrh roots still remaining at Deir el-Bahri on the West Bank at Thebes (Luxor)	103
8.2	Californian stream that demonstrates the process of meandering	105
8.3	Aerial photograph of the river bend north of Karnak looking north, showing how the Nile floodplain impinges upon the desert	106
8.4	The still backwaters of the Nile, rich with biodiversity	107
8.5	Diagram showing how a sandbank evolves into a horned bar, then an island and, around a century later, becomes bonded to the riverbank	108
8.6	Map of the ruins of Memphis with reconstruction of the ancient channels	111
8.7	‘Stairway’ in the Theban mountain	112
8.8	Palimpsest columns at the New Kingdom Temple of Sesebi in northern Sudan	113
8.9	Map of the area surrounding the Temple of Sesebi showing the areas of mining activity widely distributed around the site of the temple and town	114
9.1	Contour map of the Faiyum Basin	119
9.2	Map of Gurob incorporating the work of the Gurob Harem Palace Project	119
9.3	Excavation of kilns in the area of the ‘fort’ by Anna Kathrin Hodgkinson	121
9.4	Reconstruction of the water management that supplied the town of Oxyrhynchus	123
9.5	Roman qanat system at Ain Lebakh in the Kharga Oasis, still in use	125
9.6	A jar-well where a trickle of water can be harvested by the emplacement of a jar in the stream bed	125
9.7	Map of Kom Firin showing the area of auger coring used in the landscape interpretation	126
9.8	Mud-brick fort at the Roman settlement of Umm el-Dabadib in the Kharga Basin	128
9.9	Recording a well in the Kharga Depression	129

LIST OF FIGURES

xiii

10.1	Entrance to St Barbara's Church in Coptic Cairo	132
10.2	Roda Nilometer, Cairo, from the Nile	133
10.3	Map of the transport connections of the Eastern Delta including the Bitter Lakes canal	136
10.4	A Graeco-Roman sculpture (with replacement head) of the Nile god surrounded by putti representing the 16 cubits of flood raise required for the ideal harvest. Source: Adam Eastland/Alamy Stock Photo	138
11.1	Chains of villages that follow the Nile bank at the time of the reforms of Mohammad Ali	141
11.2	Diagram drawn from historic GoogleEarth imagery showing how the expansion of the delta fringes proceeded during the twentieth century	143
11.3	GoogleEarth image of rotor fields in the Sahara Desert	144
11.4	Diagram from United Nations Environmental Programme (UNEP) estimates of the extent to which the delta will be flooded with 0.5 m and 1.5 m of sea-level rise	146
A.1	Eijkelkamp hand auger	149
A.2	Tray of clasts sieved out of an auger core	150
A.3	Diagram illustrating the topography and use of a horned bar developing in the Nile Valley	152
A.4	Cross-section through the sediments of the historic channel at al-Zaniyah Island	154
A.5	Crocodile Island and the former Banana Island in the Luxor area, with the Nile to the west and the fields of the Nile floodplain to the east	155
A.6	Contemporary active dune in the Sahara Desert showing a characteristic crescent shape and many small ripples on the surface	156
A.7	Rim and handle of a Roman juglet from a borehole core at Karnak	157

3.1 Stages in the development of the Nile	42

ACKNOWLEDGEMENTS

The ideas and case studies compiled here accumulated over twenty-five years of fieldwork in Egypt, much of it with Angus Graham of Uppsala University, who also supplied a number of the images. During that time many archaeologists and workmen in Egypt have honed and challenged our ideas. I would like to thank a representative group here: Maha Mansourat at the Library of Alexandria for sharing the wonderful digital resources that are being collected there; members of the International Association of Landscape Archaeologists (IALA) for their inspiration as I was developing my ideas; my masters and doctoral students for their energetic work and generosity in sharing ideas on a large number of the projects, including Tom Branton, Taryn Duckworth, David Dufton, Erin Earl, Pedro Gonçalves, Ellie Hughes, Katy Lutley, Ben Pennington, Laurence Pryer, Ying Qin and Graham Smith.

I would also like to thank my many colleagues who have invited us to their excavations and tirelessly explained the archaeological niceties of the sites, particularly difficult in the case of an ignorant geologist. These heroes include Ian Shaw, who first decided that a geologist would be useful in Egypt, Sally-Ann Ashton, Bettina Bader, James Barrett, Liz Bloxham, Dan Boatright, Janine Bourieau, Tom Branton, Betsy Bryan, Alan Clapham, John Cooper, Vivian Davies, Mostafa Elwakeel, Mario Fabrizio, Omer Farouk, Lalla Farouk, Ignatio Fiz, Charly French, Renée Friedmann, Ann-Cathrin Gabel, Alison Gascoigne, Aude Grazer-Ohara, Darcy Hackley, Mohammed Hamdan, Hanan Hassan, Irmgard Hein, Jay Heidel, Ian Hodder, Anna Kathrin Hodgkinson, Morag Hunter, Ahmed Hussein, Salima Ikram, Jean Jacquet, Helen Jacquet-Gordon, Rob Jamieson, David Jeffreys, Ray Johnson, Liz Jones, Mohsen Kamel, David Kennedy, Ayman Koko, Mark Lehner, Veerla Linseele, Piers Litherland, Myrto Malouta, Silvie Marchand, Geoffrey Martin, Aurélia Masson-Berghof, Liam McNamara, Marie Millett, Wim van Neer, Paul Nicholson, Ian Ostericher, Sarah Parcak, Virpi Perunkaa, Jan Picton, Pam Rose, Ilona Regulski, Joanne Rowland, Prof Sciuti, Graham

Smith, Lawrence Smith, Kate Spence, Neal Spencer, Alice Stevens, Steven Stoddard, Jo Story, Kris Strutt, Eva Subias, Geoffrey Tassie, Ana Tavares, Leslie Warden, Nicholas Warner and Penny Wilson. The more candid of them have told me how much they fear my endless questions, especially those about the tiny ‘mouse poo’-sized grains of pottery that have told us so much! The errors of understanding in this book remain my own.

Thanks must also go to the many inspectors of antiquities in Egypt who have assisted our work as well as to the ministers and secretaries of the Ministry of Antiquities/Supreme Council of Antiquities, under whose aegis permission was granted. Particular supporters include Mr Mansour Boraik and Mr Suleyman Ibrahim in Luxor. Our work has continued through the generosity of the Egypt Exploration Society, the British Academy, the British Museum, the Gurob Harem Palace Project, the Friends of Nekhen, Ancient Egypt Research Associates, New Kingdom Research Foundation, Centre National des Recherches Scientifiques, Metropolitan Museum, American University in Cairo and Cambridge University. I am also much indebted to my family for their practical support and to the Farouk family of Luxor who have provided logistical infrastructure and many cups of tea.

Since no book project can continue without the encouragement of its editors, I extend my thanks to Beatrice Rehl, Reim Rowe and the reviewers for steering me so deftly through the process.
