## Set-Theoretic Methods for the Social Sciences

---

### A Guide to Qualitative Comparative Analysis

Qualitative Comparative Analysis (QCA) and other set-theoretic methods distinguish themselves from other approaches to the study of social phenomena by using sets and the search for set relations. In virtually all social science fields, statements about social phenomena can be framed in terms of set relations, and using set-theoretic methods to investigate these statements is therefore highly valuable. This book guides readers through the basic principles of set-theory and then on to the applied practices of QCA. It provides a thorough understanding of basic and advanced issues in set-theoretic methods together with tricks of the trade, software handling, and exercises. Most arguments are introduced using examples from existing research. The use of QCA is increasing rapidly and the application of set theory is both fruitful and still widely misunderstood in current empirical comparative social research. This book provides the comprehensive guide to these methods for researchers across the social sciences.

**Carsten Q. Schneider** is Associate Professor in the Department of Political Science and Founding Director of the Center for the Study of Imperfections in Democracies at Central European University, Hungary.

**Claudius Wagemann** is Professor of Qualitative Social Science Methods at Goethe University, Frankfurt.

## Strategies for Social Inquiry

### Set-Theoretic Methods for the Social Sciences: A Guide to Qualitative Comparative Analysis

#### Editors

Colin Elman, *Maxwell School of Syracuse University*

John Gerring, *Boston University*

James Mahoney, *Northwestern University*

#### Editorial Board

Bear Braumoeller, David Collier, Francesco Guala, Peter Hedström, Theodore Hopf, Uskali Maki, Rose McDermott, Charles Ragin, Theda Skocpol, Peter Spiegler, David Waldner, Lisa Wedeen, Christopher Winship

This new book series presents texts on a wide range of issues bearing upon the practice of social inquiry. Strategies are construed broadly to embrace the full spectrum of approaches to analysis, as well as relevant issues in philosophy of social science.

#### Published Titles

John Gerring, *Social Science Methodology: A Unified Framework, 2nd edition*

Michael Coppedge, *Democratization and Research Methods*

Thad Dunning, *Natural Experiments in the Social Sciences: A Design-Based Approach*

#### Forthcoming Titles

Diana Kapiszewski, Lauren M. MacLean and Benjamin L. Read, *Field Research in Political Science*

Jason Seawright, *Multi-Method Social Science: Combining Qualitative and Quantitative Tools*

Introduction	1
Set-theoretic approaches in the social sciences	1
Qualitative Comparative Analysis as a set-theoretic approach and technique	8
Variants of QCA	13
Plan of the book	16
How to use this book	19

---

## **Part I Set-theoretic methods: the basics** 21

1	Sets, set membership, and calibration	23
	1.1 The notion of sets	24
	1.1.1 Sets and concepts	24
	1.1.2 The pros and cons of crisp sets	24
	1.1.3 Properties of fuzzy sets	27
	1.1.4 What fuzzy sets are not	30
	1.2 The calibration of set membership	32
	1.2.1 Principles of calibration	32
	1.2.2 The use of quantitative scales for calibration	33
	1.2.3 The “direct” and “indirect” methods of calibration	35
	1.2.4 Does the choice of calibration strategy matter much?	38
	1.2.5 Assessing calibration	40
2	Notions and operations in set theory	42
	2.1 Conjunctions, Boolean and fuzzy multiplication, intersection, logical AND	42

## Contents

2.2	Disjunctions, Boolean and fuzzy addition, union, logical OR	45
2.3	Negations, complements, logical NOT	47
2.4	Operations on complex expressions	47
2.4.1	Rules for combining logical operators	48
2.4.2	Negation, intersection, and union of complex sets	49
2.4.3	Calculating membership in complex sets	51
2.5	Relations between sets	52
2.6	Notational systems in set-theoretic methods	54
<b>3</b>	<b>Set relations</b>	<b>56</b>
3.1	Sufficient conditions	57
3.1.1	Crisp sets	57
3.1.2	Fuzzy sets	65
3.2	Necessary conditions	69
3.2.1	Crisp sets	69
3.2.2	Fuzzy sets	75
3.3	Causal complexity in set-theoretic methods	76
3.3.1	Defining causal complexity	78
3.3.2	INUS and SUIN conditions	79
3.3.3	The notion of asymmetry	81
3.3.4	Set-theoretic methods and standard quantitative approaches	83
<b>4</b>	<b>Truth tables</b>	<b>91</b>
4.1	What is a truth table?	92
4.2	How to get from a data matrix to a truth table	93
4.2.1	Crisp sets	93
4.2.2	Fuzzy sets	96
4.3	Analyzing truth tables	104
4.3.1	Matching similar conjunctions	105
4.3.2	Logically redundant prime implicants	108
4.3.3	Issues related to the analysis of the non-occurrence of the outcome	112
<b>Part II Neat formal logic meets noisy social science data</b>		<b>117</b>
<b>5</b>	<b>Parameters of fit</b>	<b>119</b>
5.1	Defining and dealing with contradictory truth table rows	120
5.2	Consistency of sufficient conditions	123
5.3	Coverage of sufficient conditions	129

**Contents**

5.4	Consistency of necessary conditions	139
5.5	Coverage of necessary conditions	144
5.6	Issues related to consistency and coverage	148
6	Limited diversity and logical remainders	151
6.1	Limited diversity in set-theoretic methods: how to see it when it is there	152
6.2	Sources of limited diversity	153
6.2.1	Arithmetic remainders	154
6.2.2	Clustered remainders	154
6.2.3	Impossible remainders	155
6.3	What limited diversity is not	157
6.4	The Standard Analysis procedure: identifying logical remainders for crafting plausible solution terms	160
6.4.1	The dimension of set relations	161
6.4.2	The dimension of complexity	165
6.4.3	The dimension of types of counterfactuals	167
6.4.4	The Standard Analysis procedure in a nutshell	175
7	The Truth Table Algorithm	178
7.1	From the data matrix to truth table	179
7.2	Attributing an outcome value to each truth table row	182
7.3	Logically minimizing the truth table	186
7.4	Implications of the Truth Table Algorithm	190
<b>Part III Potential pitfalls and suggestions for solutions</b>		195
8	Potential pitfalls in the Standard Analysis procedure and suggestions for improvement	197
8.1	Beyond the Standard Analysis: expanding the types of counterfactuals	198
8.2	The Enhanced Standard Analysis: forms of untenable assumptions and how to avoid them	200
8.2.1	Incoherent counterfactuals I: contradicting the statement of necessity	201
8.2.2	Incoherent counterfactuals II: contradictory assumptions	203
8.2.3	Implausible counterfactuals: contradicting common sense	206
8.2.4	Putting the Enhanced Standard Analysis procedure into practice	209

8.3	Theory-Guided Enhanced Standard Analysis: complementary strategies for dealing with logical remainders	211
8.3.1	Choosing entire truth table rows as good counterfactuals	212
8.3.2	Formulating conjunctural directional expectations	215
8.4	Comparing the different strategies for the treatment of logical remainders	217
9	Potential pitfalls in the analysis of necessity and sufficiency and suggestions for avoiding them	220
9.1	Pitfalls in inferring necessity from sufficiency solution terms	221
9.1.1	Hidden necessary conditions	221
9.1.2	The appearance of false necessary conditions	227
9.2	The analytic consequences of skewed set-membership scores	232
9.2.1	The coverage of necessary conditions and the problem of trivialness	233
9.2.2	The consistency of sufficient conditions and the problem of simultaneous subset relations	237
9.2.3	A general treatment of skewed set membership in fuzzy-set analyses	244
<b>Part IV Variants of QCA as a technique meet QCA as an approach</b>		251
10	Variants of QCA	253
10.1	The two-step approach	253
10.2	Multi-value QCA	255
10.2.1	Principles of mvQCA: notation and logical minimization	256
10.2.2	An assessment of mvQCA	258
10.3	Set-theoretic methods and time	263
10.3.1	Forms of causally relevant notions of time	264
10.3.2	Informal ways of integrating notions of time into set-theoretic methods	265
10.3.3	Sequence elaboration	266
10.3.4	Temporal QCA	269
11	Data analysis technique meets set-theoretic approach	275
11.1	Recipe for a good QCA	275
11.1.1	The appropriateness of set-theoretic methods	276
11.1.2	The choice of the conditions and the outcome	276

## Acknowledgements

This book has a long history. In the process of writing it, we were fortunate to profit from interactions with many of our friends and colleagues. Above all, Charles Ragin has been a “necessary condition” – an extraordinary pleasant one – for writing this book, and not only for the obvious reason that, by inventing QCA, he is the person most singly responsible for putting set-theoretic methods on the agenda. Over the past decade, he has also provided us with continuous support, always generously sharing his insights and new ideas.

We also owe many thanks to colleagues who helped us in various ways in this enterprise: Damien Bol, Patrick Emmenegger, Daisuke Mori, Benoît Rihoux and Ingo Rohlfing took the enormous effort to read through the whole manuscript and provided us with excellent comments. Daniel Bochsler, Wiebke Breustedt, John Gerring, Gary Goertz, Bernard Grofman, James Mahoney, Dorothee McBride, Leonardo Morlino, Svend-Erik Skaaning, and Alrik Thiem read parts of the book and engaged with us in debates that were sometimes heated, but were always fruitful and friendly. We have also learned much from the many thought-provoking questions (and often intriguing answers) posed by the participants of the set-theoretic methods courses we have taught over the past decade. We are grateful for support on software-related issues provided by Adrian Dusa, Ronggui Huang, Kyle C. Longest, Alrik Thiem, Stephen Vaisey, and Mario Quaranta. In addition, Mario helped us enormously during the editing of the final version of the manuscript. Special thanks go to Colin Brown for his meticulous checking of not just one, but various versions of the English manuscript over the past year and a half.

We owe our thanks to the editors of the Strategies for Social Inquiry series, Colin Elman, John Gerring, and James Mahoney, for their input and their trust in the feasibility of this project, and to John Haslam and his team at Cambridge University Press for their professional support.

We have tried our best to make the most of all this help. All remaining omissions and mistakes are, of course, our sole responsibility.

## Acknowledgements

---

Carsten Q. Schneider is grateful for financial support received from The Young Academy (Die Junge Akademie) and the German Academic Exchange Service (DAAD). Our home institutions during the writing period – the Central European University in Budapest and the Minda de Gunzburg Center for European Studies at Harvard University for Carsten, and the Istituto Italiano di Scienze Umane in Florence and New York University Florence for Claudius – made the completion of this book possible by granting us the necessary time and infrastructure.

Last but not least, we owe deep gratitude to our families and friends for their patience and for listening (or at least pretending to) when diverting dinner conversations into discussions on the pros and cons of set relations, untenable pregnant men, and the asymmetries of the world we live in.
