Chapter 1: The Journey East	1
1.1 Introduction	1
1.2 The Palaeolithic of Asia	3
1.3 Human Adaptation in the Asian Palaeolithic	5
Chapter 2: The Pleistocene Planet	8
2.1 Introduction	8
2.2 The Quaternary Period	9
2.3 Rapid Climate Change	18
2.4 Conclusion	24
Chapter 3: Hominin Dispersal beyond Africa during the Lower and Middle Pleistocene	25
3.1 Introduction	25
3.2 Lower Pleistocene (2.58–0.775 Ma) Dispersals of Anatomically Archaic Hominins	25
3.3 Middle Pleistocene (775–127 KBP) Dispersals of Anatomically Archaic <i>Homo</i>	46
3.4 Dispersal Mechanisms: Faunal Turnovers, Carnivory and Habitat Specificity	62
3.5 Conclusion	66
Chapter 4: Regional Trajectories in Modern Human Behaviour	68
4.1 Introduction	68
4.2 The ‘Human Revolution’ in Europe	68
4.3 Modern Human Behaviour Beyond Europe	80
4.4 Conclusion	84
Chapter 5: The Initial Upper Pleistocene Dispersal of <i>Homo sapiens</i> Out of Africa	85
5.1 Introduction	85
5.2 MIS-5e (126–116 KBP)	85
5.3 MIS-5d to the Last Termination (116–22 KBP)	97
5.4 Conclusion	139

Chapter 6: Climate, Dispersal and Technological Change during the Last Termination and Early Holocene in Southeast Asia	142
6.1 Introduction	142
6.2 Regional Climate and Conditions across the Last Termination (22–11.7 KBP)	142
6.3 Genetic Evidence of Human Dispersal during the Last Termination	149
6.4 Technological Change	150
6.5 Conclusion	204
Chapter 7: Tropical Subsistence Strategies at the End of the Last Glacial	208
7.1 Introduction	208
7.2 Northern Borneo: Niah Caves	210
7.3 Northern Vietnam: Tràng An	232
7.4 Eastern Peninsular Malaysia: Gua Sagu and Gua Tenggek	251
7.5 Inter-Site Patterns of Subsistence through the Last Termination and Early Holocene	261
7.6 Conclusion	264
Chapter 8: <i>Ex Levis Terra</i>	266
8.1 Introduction	266
8.2 The Colonization of New Environments and the Recolonization of Changing Ones	267
8.3 The Last Termination in Southeast Asia	281
8.4 Discussion: Hominin Dispersal, Climate Change and Behavioural Evolution	284
8.5 Conclusion	288
<i>Appendix</i>	291
<i>Bibliography</i>	307
<i>Index</i>	361

List of Figures and Tables

Figures

2.1	Chronostratigraphic correlations for the Quaternary period.	page 11
2.2	Fox Glacier, South Island, New Zealand.	13
2.3	Map showing the locations of the Greenland GRIP, GISP2, NGRIP and NEEM ice-coring operations and the Antarctic locations of the Vostok and EPICA Kohnen Station (EDML) and Dome C ice core drilling sites.	15
2.4	The drill hole at the NEEM ice core drilling camp.	17
2.5	The $\delta^{18}\text{O}$ GISP2 ice core curve and tropical Atlantic sea surface temperature curve. GIS stages back to <i>c.</i> 57 KBP and GS stages back to <i>c.</i> 40 KBP, with the most recent named stadial and interstadial phases from the European sequence.	19
2.6	An ice floe from the Breiðamerkurjökull glacier, Jökulsárlón lagoon, southeast coast of Iceland.	22
2.7	Schematic of the global thermohaline circulation.	23
3.1	Map showing the East Asian Lower and Middle Pleistocene sites, together with the location of the Chinese Loess Plateau and key stratigraphic reference sections.	27
3.2	Map showing the locations of the Toba and Tambora volcanoes and the distribution of the Australasian tektite strewn field.	43
3.3	Excavations during the 1997 field season at the Gesher Benot Ya'aqov site on the River Jordan, Israel.	47
3.4	Gunung Temporung, Perak, West Malaysia.	57
3.5	Two bifaces from Bukit Bunuh, West Malaysia.	59
4.1	A portrayal of early anatomically and behaviourally modern <i>H. sapiens</i> during our species' Late Pleistocene dispersal through Europe.	69
4.2	Map showing northwest Eurasian sites.	71
4.3	A portrayal of body ornamentation and pigment use (here, on the scalp) among Late Pleistocene <i>H. sapiens</i> around the time of their entry into Europe.	72
4.4	A miniature horse pendant (47 mm in length, 25 mm in height) sculpted from mammoth ivory (perforated between the front legs), dated to the Aurignacian, 30–36 kbp, Vogelherd, Germany.	73
4.5	The panel of horses from the Grotte Chauvet, Ardèche, France.	75
4.6	Franchthi Cave, southeastern Argolid, Greece.	79
4.7	Two <i>N. gibbosulus</i> shell beads from Es-Skhül, Israel.	81
4.8	A selection of MSA bone points from Blombos Cave, South Africa.	83
5.1	MIS-5 (74–126 KBP) oxygen isotope curve.	87
5.2	Map showing the trans-Saharan watershed, together with key African and Middle Eastern sites.	89
5.3	The Mount Carmel caves viewed from the northwest.	90

Table of Contents

[More information](#)*List of Figures and Tables*

5.4	The small north-facing Es-Skhūl cave and terrace, Mount Carmel.	91
5.5	Map of South, Central and northern Asia, showing the locations of sites discussed in the text.	95
5.6	Lang Rongrien rock-shelter under excavation 1984–5.	111
5.7	Photograph of the immediate environs of the Bukit Bunuh island site from a palaeolake, Lenggong Valley, West Malaysia.	113
5.8	Looking out through the West Mouth entrance to the Niah Caves complex.	116
5.9	Looking north across the ‘Hell’ trench system as preserved today towards the rock overhang and the Deep Skull still <i>in situ</i> .	117
5.10	A fragment of hominin cranium with pigment adhering to the interior surface.	118
5.11	Pigmented Geomydidae plastron from Area A of the West Mouth, Niah Caves, dated to <i>c.</i> 41 cal. KBP.	119
5.12	A selection of struck flakes from the Hell and lower E/B1 trenches, Niah Caves.	120
5.13	Photographs of the earliest bone tool from the Hell trench, Niah Caves.	121
5.14	Inter-cutting pit features in the Pleistocene deposits of the West Mouth during the 1959 excavations of this part of the cave and the section sampled by the Niah Caves Project.	123
5.15	Indonesian–Australian excavations at Liang Bua, Flores and deep excavations in Sectors VII and XI.	124
5.16	Excavating LB1 in Sector VII.	125
5.17	Map of Pleistocene Southeast Asia, showing the exposed Sunda Shelf to –116 m, prevailing ocean currents and possible human migration routes through Wallacea.	133
6.1	Map of Pleistocene Southeast Asia, showing the locations of terrestrial and ocean sediment core records.	144
6.2	Photograph of the Situ Bayongbong location during coring.	145
6.3	Map of Pleistocene Southeast Asia, showing the distribution of bone tool assemblages across the Sunda Shelf, Wallacea and northwest Sahul.	153
6.4	Examples of bone points from the Phase II occupation at Lobang Hangu, classified as likely to have been projectile armatures.	154
6.5	A ‘self-barbed’ bone point from the Lobang Hangu, Phase II assemblage, compared with a bone-barbed spear from Australia.	155
6.6	An example of a longitudinally split short convex point, or ‘gouge’, with significant rounding and polishing to the utilised surface, Phase II, Lobang Hangu, and an example of a more complete specimen of this kind of implement from the Late Holocene levels at nearby Kain Hitam Cave.	156
6.7	Stingray barb points (probably <i>Pastinachus sephen</i>) excavated by the Niah Caves Project in Area D of the West Mouth.	157
6.8	Evidence of extensively imposed form to create a hafting surface, Ban Lum Khao.	165
6.9	Examples of scrapers from the Early Holocene horizons at Lie Siri.	169
6.10	Elongated, blade-like scrapers from horizons I and II at Bui Ceri Uato, East Timor.	170
6.11	Tanged and other retouched blades from Uai Bobo 1, horizons V to IIIc.	171
6.12	Fish hook made from <i>Trochus niloticus</i> , Lene Hara.	172
6.13	Ulu Leang 1 at the end of excavations, July 1969.	178
6.14	Examples of Maros points.	179
6.15	An example of a unifacial, centripally flaked pebble tool or ‘Sumatra type’, 16 × 84 mm, from Gunong Pondok, layer G, 3.56 m below datum.	187

List of Figures and Tables

6.16	A pebble tool still <i>in situ</i> in the Deep Sounding of the Hang Boi excavation.	189
6.17	Limestone blade-flake and core face rejuvenation flake from Hang Trống, Trảng An, Vietnam.	191
6.18	An early stage in excavations at Gua Kerbau in 1926.	195
7.1	Photograph showing excavation work beneath the rock overhang (Area A, Niah Caves Project), probably 1965.	211
7.2	The archaeological compound of the West Mouth, Niah Caves.	221
7.3	Fragments of Cercopithecidae long bone constituting manufacturing debris from bone tool production.	227
7.4	Examples of cut-marked distal humeri from Cercopithecidae from the Lobang Hangus, Phase II occupation.	229
7.5	The NISP values and frequency of occurrence of butchery traces to the distal humerus of <i>Arctictis binturong</i> compared to other key taxonomic groups from the Phase II cut-marked assemblage from Lobang Hangus.	231
7.6	A view of the Upper Cave at Hang Boi looking east towards the archaeological compound and access to the Lower Cave, with the opening to the cave mouth visible.	232
7.7	Contexts and sample columns in the east and south-facing sections of Trench 1 at Hang Boi.	233
7.8	The southeast-facing section of excavations at Hang Boi (2009 field season), illustrating the whole shell and sediment-rich crushed shell stratigraphy that has been revealed in the Upper Cave shell midden.	235
7.9	The remains of a hunter's small fire found on the open floor of the Upper Cave at Hang Boi in 2010.	238
7.10	Three pierced Neritidae shells recovered from midden contexts at Hang Boi.	239
7.11	<i>Villopotamon</i> sp. Raffles Museum of Biodiversity Research at the University of Singapore and specimens of archaeological chelae from Hang Boi.	240
7.12	<i>Panthera cf. pardus</i> specimen from Hang Boi compared against <i>Panthera tigris</i> .	241
7.13	Archaeological (L) maxilla fragment with PM ¹ , M ¹ and M ³ <i>in situ</i> , compared alongside <i>Ratufa</i> (= <i>Sciurus</i>) <i>bicolor</i> .	242
7.14	Keeled box turtle (<i>Cuora mouhotii</i>) and a nuchal fragment identified to this species.	245
7.15	One of a population of <i>Macaca arctoides</i> (stump-tailed macaque) that currently inhabits Trảng An Park.	247
7.16	Asian leaf turtle (<i>Cyclemys dentata</i>) and specimens of third and fourth (L) peripheral dermal plates of this species from Gua Sagu.	257
7.17	Cut-marks to the inside of the hyo- or hypoplastron dermal plate of a chelonid, Gua Sagu, and cut-marks to a chelonid femur or humerus mid-shaft.	259
8.1	View of wet rice fields just prior to the transplantation of rice seedlings, near the village of Pa' Dalih in the Kelabit Highlands of Sarawak.	275

Tables

3.1	Identified Mammalian Fauna from Goudi/Majuangou III and Xiaochangliang, Northeast China	33
3.2	Identified Mammalian Fauna from Chenjiawo and Gongwangling, Central China	36
3.3	Identified Mammalian Fauna from the M3 and M4 Components of the 'Yuanmou Hominid Fauna', Yuanmou Basin, North Central China	38

7.1	Identified Taxa from the Early and Late Phase II Occupation of Area A, in the West Mouth of the Niah Caves (Excluding Human Remains)	213
7.2	Taxa Represented during the Early Holocene Occupation of the West Mouth, Area D	222
7.3	Taxa Represented during the GIS-1 Occupation of Lobang Hangus	224
7.4	Identified Invertebrate Macrofaunal Remains from the Upper Cave Shell Midden (2007–8 Samples), Hang Boi	237
7.5	Vertebrate Fauna Identified and Quantified from the Cave Mouth Midden at Hang Boi (2008–9 samples quantified)	243
7.6	Identified Vertebrate Fauna from Pleistocene and Early Holocene Levels at Gua Sagu (spits 5–11) and Gua Tenggek (spits 4–7)	255
8.1	The Broad Adaptive Circumstances and Strategies of Tropical Hunter-Gatherer Communities during most of the Last Termination, Southeast Asia	283
