- $(\mu, \sigma)$  Brownian motion, 1
- absolutely continuous function, 179
- absorbing barrier, 44, 47
- adapted process, 175
- assembly operation, 33
- average cost criterion, 120, 130
- backward equation, 38
- balanced high-volume flows, 30
- barrier policy, 26, 127–132, 135
- Bayesian, 138, 150
- binary prior distribution, 138, 148
- blending operation, 33
- blocked, 34
- Borel  $\sigma$ -algebra, xvii
- Brownian component of Itô process, 61
- Brownian motion, 1
  - with respect to a given filtration, 2
- Brownian quickest detection, 154
- Brownian sequential detection, 141
- Brownian storage system, 96
- buffer storage, 18
- buffered stochastic flow, 19
- canonical space, 176
- capacity expansion, 166
- cash management, 133
- Cauchy sequence, 54
- change of measure theorem, 12
- change-point detection, 152
- chunks (of investment), 166
- complete filtration, 172
- complete probability space, 172
- completeness of  $L^2$ , 54
- compounding Brownian motion, 157
- continuation costs, 79
- continuation region, 87, 145
- continuous compounding, 26
- continuous part of VF process, 69
- contribution margin, 28, 29
- control band policy, 113–115
- control barrier, 109
- control problem, 109
- controlled process, 126
- coordinate process, 2, 17, 36, 78, 90, 110, 176
- cost of stochastic variability, 29
- density function for a random variable, xv
- differential operator  $\Gamma$ , xvi
- diffusion equation, 38
- diffusion process, 60, 76, 87, 157
- dilation (of zero-set), 164, 165
- Dirac delta function, 38
- direction of control, 32
- Dirichlet (first-type) boundary condition, 161
- discounted costs, 43, 93
- discounted performance measure, 30
- discretization parameter, 167
- distribution of a continuous process, 175
- distribution of a random variable, 173
- drift component of Itô process, 61
- dynamic optimization, 109
- effective cost of holding inventory, 28
- equivalence class of  $L^2$  random variables, 58
- equivalent measures, 11
- events, 171
- excess capacity, 28, 29
- excessive function, 86
- feasible policy, 111–113, 127, 129
- filtered probability space, 171
- filtering, x, 8
- filtration, 171
  - generated by  $X$ , 176
- financial cost of holding inventory, 26
- finished goods inventory, 18, 25, 27

finite buffers, 22  
 finite-dimensional distributions, 175  
 first passage time distribution, 15  
 forward equation, 38  
 Fubini's theorem, 177  
 fundamental sequence, 54  
 Gaussian prior distribution, 148  
 generator matrix, 149  
 geometric Brownian motion, 80, 87, 89, 166  
 guess-and-verify (approach), x, 77, 79, 154  
 heat equation, 38  
 homogeneous equation, 46  
 ideal profit level, 28  
 impulse control, 110, 120  
 indefinite Riemann–Stieltjes integral, 180  
 indefinite stochastic integral, 53  
 independent increments, 1  
 indicator function, xv  
 indicator random variable, xv  
 infinite variation (of Brownian paths), 3  
 infinitesimal generator, 149  
 inhomogeneous equation, 46  
 innovation theorem, 7, 8, 138, 150  
 innovations process, 8  
 input process, 18  
 instantaneous control, 126, 128, 130  
 integrability theorem, 180  
 integrand, 52, 180  
 integration by parts, 69, 70, 180  
 integrator, 180  
 interest rate, 26  
 inventory, 18  
 inventory holding cost, 26  
 inventory process, 19  
 Itô differential, 61  
 Itô process, 61  
 Itô's formula  
   generalizations, 67, 69  
   multi-dimensional form, 64, 65  
   simplest form, 61  
 joint distribution of Brownian motion and its maximum, 13  
 joint measurability, 174  
 jump boundaries, 50  
 jumps of a VF process, 68  
 killing, 159–161  
 Laplace transform, 38  
 linear holding costs, 109

linearized random walk, 26, 35  
 local martingale, 59  
 local time, 5, 66  
 long-run average cost rate, 30, 109, 120  
 lost potential input, 22, 25, 30, 34  
 lost potential output, 19, 22, 25, 30, 33  
 lower reflecting barrier, 15, 20, 23, 24, 110, 127, 135, 162  
 majorize, 78, 82, 85–87  
 martingale, 177  
 martingale convergence theorem, 177  
 martingale stopping theorem, 177  
 McDonald–Siegel investment model, 80, 83, 88, 166  
 mean reverting, 156  
 measurable space, 171  
 memoryless property  
   of the one-sided reflection mapping, 21  
   of the two-sided reflection mapping, 25  
 multi-dimensional Itô formula, 64, 65  
 multi-dimensional Itô process, 64  
 multi-dimensional reflected Brownian motion, 108  
 multi-dimensional reflection mapping, 32, 106  
 multiplication table for stochastic calculus, 62  
 negative part, xvii  
 netflow process, 20  
 Neumann (second-type) boundary condition, 161  
 noise, x, 8, 137  
 non-anticipating functional, 166  
 norm, 54, 55  
 null sets, 11, 172  
 O–U process, 155  
 oblique reflection, xii  
 occupancy distribution, 97  
 occupancy measure, 4, 17, 97  
 ODE, 43  
 one-sided reflection mapping, 20, 21  
 opportunity loss, 26–28, 134  
 optimal stopping problem, 77, 83, 87, 88, 137, 142  
 optimal stopping region, 87, 145  
 optimal value function, 85  
 optimality conditions, 115–117, 123, 128, 131  
 optional sampling theorem, 177  
 Ornstein–Uhlenbeck process, 155

- outcomes, 171
- output process, 18
- partial expectation, xvii
- partially observed Markov chain, 149
- particular solution, 46
- physical holding cost, 26, 28
- piecewise constant approximation, 167
- point of increase, xvi
- Poisson process, 163
