## Contents

<i>Preface</i>	ix
<i>Guide to Notation and Terminology</i>	xv
<b>1 Brownian Motion</b>	<b>1</b>
1.1 Wiener's theorem	1
1.2 Quadratic variation and local time	3
1.3 Strong Markov property	5
1.4 Brownian martingales	6
1.5 Two characterizations of Brownian motion	7
1.6 The innovation theorem	7
1.7 A joint distribution (Reflection principle)	9
1.8 Change of drift as change of measure	10
1.9 A hitting time distribution	13
1.10 Reflected Brownian motion	15
1.11 Problems and complements	16
<b>2 Stochastic Storage Models</b>	<b>18</b>
2.1 Buffered stochastic flow	19
2.2 The one-sided reflection mapping	20
2.3 Finite buffer capacity	22
2.4 The two-sided reflection mapping	23
2.5 Measuring system performance	25
2.6 Brownian storage models	30
2.7 Problems and complements	31
<b>3 Further Analysis of Brownian Motion</b>	<b>36</b>
3.1 Introduction	36
3.2 The backward and forward equations	37
3.3 Hitting time problems	38
3.4 Expected discounted costs	43
3.5 One absorbing barrier	44
3.6 Two absorbing barriers	47

Cambridge University Press

978-1-107-01839-6 - Brownian Models of Performance and Control

J. Michael Harrison

Table of Contents

[More information](#)

vi	<i>Contents</i>	
3.7	More on reflected Brownian motion	48
3.8	Problems and complements	48
<b>4</b>	<b>Stochastic Calculus</b>	<b>52</b>
4.1	Introduction	52
4.2	First definition of the stochastic integral	53
4.3	An illuminating example	56
4.4	Final definition of the integral	58
4.5	Stochastic differential equations	60
4.6	Simplest version of Itô's formula	61
4.7	The multi-dimensional Itô formula	64
4.8	Tanaka's formula and local time	65
4.9	Another generalization of Itô's formula	68
4.10	Integration by parts (Special cases)	69
4.11	Differential equations for Brownian motion	70
4.12	Problems and complements	72
<b>5</b>	<b>Optimal Stopping of Brownian Motion</b>	<b>77</b>
5.1	A general problem	78
5.2	Continuation costs	79
5.3	McDonald–Siegel investment model	80
5.4	An investment problem with costly waiting	83
5.5	Some general theory	85
5.6	Sources and literature	88
5.7	Problems and complements	88
<b>6</b>	<b>Reflected Brownian Motion</b>	<b>90</b>
6.1	Strong Markov property	90
6.2	Application of Itô's formula	92
6.3	Expected discounted costs	93
6.4	Regenerative structure	95
6.5	The steady-state distribution	98
6.6	The case of a single barrier	101
6.7	Problems and complements	103
<b>7</b>	<b>Optimal Control of Brownian Motion</b>	<b>109</b>
7.1	Impulse control with discounting	110
7.2	Control band policies	113
7.3	Optimal policy parameters	115
7.4	Impulse control with average cost criterion	120
7.5	Relative cost functions	121
7.6	Average cost optimality	123
7.7	Instantaneous control with discounting	126

Cambridge University Press

Table of Contents

[More information](#)

<i>Contents</i>		vii
7.8	Instantaneous control with average cost criterion	130
7.9	Cash management	133
7.10	Sources and literature	134
7.11	Problems and complements	135
<b>8</b>	<b>Brownian Models of Dynamic Inference</b>	137
8.1	Drift-rate uncertainty in a Bayesian framework	138
8.2	Binary prior distribution	138
8.3	Brownian sequential detection	141
8.4	General finite prior distribution	145
8.5	Gaussian prior distribution	148
8.6	A partially observed Markov chain	149
8.7	Change-point detection	152
<b>9</b>	<b>Further Examples</b>	155
9.1	Ornstein–Uhlenbeck process	155
9.2	Probability of ruin with compounding assets	156
9.3	RBM with killing at the boundary	159
9.4	Brownian motion with an interval removed	161
9.5	Brownian motion with sticky reflection	164
9.6	A capacity expansion model	166
9.7	Problems and complements	168
<b>Appendix A</b>	<b>Stochastic Processes</b>	171
A.1	A filtered probability space	171
A.2	Random variables and stochastic processes	173
A.3	A canonical example	176
A.4	Two martingale theorems	176
A.5	A version of Fubini’s theorem	177
<b>Appendix B</b>	<b>Real Analysis</b>	179
B.1	Absolutely continuous functions	179
B.2	VF functions	180
B.3	Riemann–Stieltjes integration	180
B.4	The Riemann–Stieltjes chain rule	181
B.5	Notational conventions for integrals	182
