

Index

- ℓ_q quasi-norm, 109
- 802.11, 17, 19, 20, 21, 29, 39, 45
- 802.15, 6, 23, 26, 27
- 802.16, 6, 17, 18, 19
- 802.20, 19
- 802.22, 42, 43
- ad hoc network, 28–31
- ADC, 37, 118–138, 142, 148, 174
 - ADC with intermediate FM stage, 124
 - delta-encoded ADC, 123
 - direct-conversion ADC (flash ADC), 122
 - integrating ADC (dual-slope or multislope ADC), 123
 - pipeline ADC, 124
 - sigma-delta ADC, 124
 - successive-approximation ADC, 122, 123
 - time-interleaved ADC, 124
 - time-stretch analog-to-digital converter (TS-ADC), 124
 - Wilkinson ADC, 123
- Aloha, 28
- alternating direction method of multipliers (ADMM), 94
- angle of arrival (AOA), 46, 47, 193
- attenuation factor, 9
- audio on demand, 22
- augmented Lagrangian method, 85, 93
- baseband, 11, 24
- basis pursuit, 81, 96, 172
 - dual of basis pursuit, 84
 - group basis pursuit, 99
 - overlapping group basis pursuit, 99
- basis pursuit denoising model (BPDN), 88
- beamforming, 39
- blind channel estimation, 171
- bluetooth, 6, 23–26
- BPSK, 20
- Bregman method, 86–96
 - Bregman distance, 83, 86
 - Bregman iteration, 88–90
 - linearized Bregman and augmented model, 90–92
- bridge variable, 102
- CCK, 20
- CDMA, 17, 144, 215, 216
 - CDMA2000, 13, 15–16
 - IS-95, 15
 - TD-SCDMA, 16
 - WCDMA, 13, 16
- cellular network, 6
 - 3G, 13–16
 - 4G, 16
- channel capacity, 42
- channel model, 6, 7
- chip rate, 27
- co-channel interference, 39
- cognitive radio, 43, 163, 198, 232–267
- coherence, 60
- coherent bandwidth, 10, 11, 27
- collaborative spectrum sensing, 232, 236
- combination, 27, 35, 43
- complexity, 16, 33, 43
- compressive sensing (CS), 52, 56
- constraints, 70
- convex function, 70
- convex optimization, 262
- convex set, 70
- coordinate minimization, 103
 - (block) coordinate descent (BCD), 103
 - Gauss–Seidel, 103
 - Gauss–Southwell, 103
- correlation, 10, 35
- Cramér–Rao Lower Bound (CRLB), 48, 154
- CSMA, 45
- data fusion, 33, 35, 36
- DCF, 45
- decision variable, 70
- DECT, 16
- delay
 - delay profile, 10
 - delay spread, 10
 - propagation delay, 10
- diffraction, 8
- DIFS, 45

- direct demodulation, 188–192
 diversity
 diversity gain, 16
 spatial diversity, 20, 39
 Doppler, 10, 11
 Doppler shift, 10
 Doppler spread, 10, 11
 doubly selective channel, 144
 dual norm, 92
 duality, 84, 92
 dynamic CS, 202–207, 251–259

 EDCF, 22
 EDGE, 16
 embedded operating system, 32
 Estimation of Signal Parameter via Rotational
 Invariance Technique (ESPRIT), 133
 Ethernet, 31

 fading
 fast fading, 11
 flat fading, 11
 frequency-selective fading, 11
 large-scale model, 7
 multipath fading, 10
 shadowing, 8, 9, 34
 slow fading, 11
 small-scale fading, 11
 Federal Communications Commission (FCC), 19,
 26, 27, 41, 173, 232
 fingerprinting, 193, 194, 195, 196
 forward-backward operator splitting, 80
 free space model, 7
 frequency hopping, 19, 24

 Gaussian frequency shift-keying, 24
 Gaussian random variable, 9
 global consensus problem, 100
 GPS, 27, 34, 43
 gradient descent, 91, 95, 103
 greedy pursuit algorithm, 110
 group sparsity, 84, 172
 GSM, 16
 guard
 guard band, 43
 guard subcarrier, 20

 hard-thresholding pursuit (HTP), 114
 high-occupancy vehicles (HOV), 42
 HIPERMAN, 17
 homotopy algorithms, 105
 μ -parametric form, 107

 impulse response, 10
 IMT-2000, 16
 independent basic service set (IBSS), 31
 indoor propagation, 9

 ISM, 19, 24, 26
 iterative support detection (ISD), 112, 147, 151,
 152
 ITU, 16, 26

 jitter, 22
 joint sparsity, 240–243

 k-connectivity, 30
 Karush–Kuhn–Tucker (KKT) conditions, 72, 85

 L-OPT algorithm, 181
 LADAR, 34
 LASSO, 99, 160, 223
 line of sight, 8, 17, 18, 24
 line search, 107
 linear programming, 75
 localization, 34, 45–48
 CS-based Localization, 259–267
 log distance path loss model, 9
 logical link control, 19

 matrix completion, 166–168, 237–240
 medium access control, 19, 42
 MIMO, 20, 41, 143
 mobile ad hoc network (MANET), 29, 30
 mobility, 6, 16, 21, 22, 29, 30–31, 43
 modulated wideband converter, 127–129
 multipath component, 11
 Multiple Signal Classification (MUSIC)
 root MUSIC, 133
 multiuser detection, 217–220
 interference cancelation MUD, 218
 parallel interference cancelation MUD, 219
 successive Interference Cancelation MUD,
 220
 linear multiuser detector, 218
 decorrelator MUD, 218
 matched filter, 218
 minimum mean square error MUD, 218
 optimal multiuser detector, 217
 individual optimal multiuser detector
 (IO-MUD), 217
 joint optimal multiuser detector (JO-MUD),
 217

 Nakagami distribution, 11
 network interface card, 31
 non-convex optimization, 109
 nuclear-norm, 73, 75, 84, 114, 166, 238
 null-space property, 62

 objective function, 70
 OFDM, 16, 18, 27, 36–39, 144, 214
 OFDM channel estimation, 146–159
 OFDM Pilot, 144, 161
 OFDMA network, 20, 36, 38

- Orthogonal Matching Pursuit (OMP), 110, 141, 180, 218
 block OMP, 182–184
 CoSaMP, 111
 regularized OMP, 111
 sequential OMP, 224
 stage-wise OMP (StOMP), 111
 subspace pursuit, 111
 outdoor propagation model, 9
- packet radio networks (PRNET), 28
 parametric quadratic programming, 105, 107
 path-loss factor, 8
 PCF, 22
 PCS, 9, 41
 piconet, 23, 24, 25, 26, 31
 power control, 39, 42, 225, 237
 price of anarchy, 29
 pricing, 19
 principle component analysis (PCA), 97
 protocol data unit (PDU), 17
 prox-linear, 79–83
 pseudorandom, 24
- QAM, 18
 QPSK, 20
 quadratic programming, 75, 105, 191
 quality of service, 38
 quantization, 120–121
 A-law and μ -law, 121
 optimal quantizer, 120
 vector quantization, 121
- random delay line, 136
 random demodulator, 125–127
 random field, 162–171
 Ising model, 164
 Metropolis–Hastings algorithm, 165
 random filtering, 136
 random sampling, 135
 random walk, 30
 Rayleigh, 11
 received signal strength (RSS), 46, 193, 195, 196, 197
 reflection model, 7
 restricted isometry principle, 62, 63, 104, 149
 block-RIP condition, 182
 Ricean distribution, 11
 RIPless, 62, 66
 RMS, 10, 11
 roaming, 18, 21
- sampling theorem, 118–120
 bandpass sampling theorem, 120
 oversampling, 120
- scalability, 35
 scatter, 8, 11
 scheduling, 17, 28, 31, 34
 second-order cone program, 243
 second-order cone programming, 75
 semi-definite programming, 75
 shrinkage operation, 76–79
 signal-to-noise ratio, 28
 sleeping mechanism, 34
 solutions
 feasible, 71
 global, 71
 local, 71
 space-time coding, 40
 space-time CS, 207–211
 spectral efficiency, 44
 spherical section property, 62, 65
 spread spectrum, 15, 19, 23, 24
 stability, 30
 subgradient method, 76
- time difference of arrival (TDOA), 47, 193
 time division duplexing, 25
 time synchronization, 34
 time of arrival (TOA), 193
 turbocode, 17
 two-ray model, 7
- ultra-wideband (UWB), 26–28, 173–192, 194, 205
 UMTS, 16
 underwater acoustic, 159–162
 union of subspaces, 130, 133
- varying step-size search, 107
 video on demand, 22
 voice over IP, 22
- WAPI (WLAN Authentication and Privacy Infrastructure), 21
 WiFi, 17, 19–22
 WiMAX, 6, 16–19
 wired equivalent privacy, 21
 wireless personal area network, 6, 22–28, 31
 WLAN, 6, 15, 19, 22
 WMAN, 16–19
