	<i>Preface</i>	<i>page xiii</i>
<b>1</b>	<b>Introduction</b>	<b>1</b>
	1.1 Motivation and objectives	1
	1.2 Outline	2
<b>2</b>	<b>Overview of wireless networks</b>	<b>6</b>
	2.1 Wireless channel models	6
	2.1.1 Radio propagation	6
	2.1.2 Interference channel	11
	2.2 Categorization of wireless networks	13
	2.2.1 3G cellular networks and beyond	13
	2.2.2 WiMAX networks	17
	2.2.3 WiFi networks	19
	2.2.4 Wireless personal area networks	22
	2.2.5 Wireless ad hoc networks	28
	2.2.6 Wireless sensor networks	32
	2.3 Advanced wireless technology	36
	2.3.1 OFDM technology	36
	2.3.2 Multiple antenna system	39
	2.3.3 Cognitive radios	41
	2.3.4 Scheduling and multiple access	43
	2.3.5 Wireless positioning and localization	45
<b>Part I Compressive Sensing Technique</b>		
<b>3</b>	<b>Compressive sensing framework</b>	<b>51</b>
	3.1 Background	51
	3.2 Traditional sensing versus compressive sensing	56
	3.3 Sparse representation	57
	3.3.1 Extensions of sparse models	59

3.4	CS encoding and decoding	60
3.5	Examples	67
<b>4</b>	<b>Sparse optimization algorithms</b>	<b>69</b>
4.1	A brief introduction to optimization	70
4.2	Sparse optimization models	73
4.3	Classic solvers	74
4.4	Shrinkage operation	76
4.4.1	Generalizations of shrinkage	78
4.5	Prox-linear algorithms	79
4.5.1	Forward-backward operator splitting	80
4.5.2	Examples	81
4.5.3	Convergence rates	83
4.6	Dual algorithms	83
4.6.1	Dual formulations	84
4.6.2	The augmented Lagrangian method	85
4.6.3	Bregman method	86
4.6.4	Bregman iterations and denoising	88
4.6.5	Linearized Bregman and augmented models	90
4.6.6	Handling complex data and variables	92
4.7	Alternating direction method of multipliers	93
4.7.1	Framework	94
4.7.2	Applications of ADM in sparse optimization	96
4.7.3	Applications in distributed optimization	100
4.7.4	Applications in decentralized optimization	102
4.7.5	Convergence rates	102
4.8	(Block) coordinate minimization and gradient descent	103
4.9	Homotopy algorithms and parametric quadratic programming	105
4.10	Continuation, varying step sizes, and line search	107
4.11	Non-convex approaches for sparse optimization	109
4.12	Greedy algorithms	110
4.12.1	Greedy pursuit algorithms	110
4.12.2	Iterative support detection	112
4.12.3	Hard thresholding	113
4.13	Algorithms for low-rank matrices	114
4.14	How to choose an algorithm	115
<b>5</b>	<b>CS analog-to-digital converter</b>	<b>118</b>
5.1	Traditional ADC basics	118
5.1.1	Sampling theorem	118
5.1.2	Quantization	120
5.1.3	Practical implementation	121

5.2	Random demodulator ADC	125
5.2.1	Signal model	125
5.2.2	Architecture	125
5.3	Modulated wideband converter ADC	127
5.3.1	Architecture	127
5.3.2	Comparison with random demodulator	129
5.4	Xampling	129
5.4.1	Union of subspaces	130
5.4.2	Architecture	130
5.4.3	X-ADC and hardware implementation	131
5.4.4	X-DSP and subspace algorithms	132
5.5	Other architecture	135
5.5.1	Random sampling	135
5.5.2	Random filtering	136
5.5.3	Random delay line	136
5.5.4	Miscellaneous literature	136
5.6	Summary	138

## Part II CS-Based Wireless Communication

<b>6</b>	<b>Compressed channel estimation</b>	<b>141</b>
6.1	Introduction and motivation	141
6.2	Multipath channel estimation	143
6.2.1	Channel model and training-based method	143
6.2.2	Compressed channel sensing	143
6.3	OFDM channel estimation	146
6.3.1	System model	147
6.3.2	Compressive sensing OFDM channel estimator	148
6.3.3	Numerical algorithm	151
6.3.4	Numerical simulations	154
6.4	Underwater acoustic channel estimation	159
6.4.1	Channel model	159
6.4.2	Compressive sensing algorithms	160
6.5	Random field estimation	162
6.5.1	Random field model	163
6.5.2	Matrix completion algorithm	166
6.5.3	Simulation results	168
6.6	Other channel estimation methods	171
6.6.1	Blind channel estimation	171
6.6.2	Adaptive algorithm	171
6.6.3	Group sparsity method	172
6.7	Summary	172

<b>7</b>	<b>Ultra-wideband systems</b>	173
7.1	A brief introduction to UWB	173
7.1.1	History and applications	173
7.1.2	Characteristics of UWB	174
7.1.3	Mathematical model of UWB	174
7.2	Compression of UWB	175
7.2.1	Transmitter side compression	175
7.2.2	Receiver side compression	177
7.3	Reconstruction of UWB	180
7.3.1	Block reconstruction	180
7.3.2	Bayesian reconstruction	184
7.3.3	Computational issue	186
7.4	Direct demodulation in UWB communications	189
7.4.1	Transceiver structures	189
7.4.2	Demodulation	190
7.5	Conclusions	192
<b>8</b>	<b>Positioning</b>	193
8.1	Introduction to positioning	193
8.2	Direct application of compressive sensing	194
8.2.1	General principle	194
8.2.2	Positioning in WLAN	195
8.2.3	Positioning in cognitive radio	198
8.2.4	Dynamic compressive sensing	203
8.3	Indirect application of compressive sensing	205
8.3.1	UWB positioning system	205
8.3.2	Space-time compressive sensing	207
8.3.3	Joint compressive sensing and TDOA	210
8.4	Conclusions	212
<b>9</b>	<b>Multiple access</b>	214
9.1	Introduction	214
9.2	Introduction to multiuser detection	215
9.2.1	System model for CDMA	216
9.2.2	Comparison between multiuser detection and compressive sensing	216
9.2.3	Various algorithms of multiuser detection	217
9.2.4	Optimal multiuser detector	217
9.3	Multiple access in cellular systems	221
9.3.1	Uplink	221
9.3.2	Downlink	226
9.4	Multiple access in sensor networks	227

	9.4.1 Single hop	227
	9.4.2 Multiple hops	229
	9.5 Conclusions	231
<b>10</b>	<b>Cognitive radio networks</b>	<b>232</b>
	10.1 Introduction	232
	10.2 Literature review	234
	10.3 Compressive sensing-based collaborative spectrum sensing	236
	10.3.1 System model	236
	10.3.2 CSS matrix completion algorithm	237
	10.3.3 CSS joint sparsity recovery algorithm	240
	10.3.4 Discussion	243
	10.3.5 Simulations	244
	10.4 Dynamic approach	251
	10.4.1 System model	252
	10.4.2 Dynamic recovery algorithm	253
	10.4.3 Simulations	255
	10.5 Joint consideration with localization	259
	10.5.1 System model	259
	10.5.2 Joint spectrum sensing and localization algorithm	261
	10.5.3 Simulations	264
	10.6 Summary	267
	<i>References</i>	268
	<i>Index</i>	291
