<i>Preface</i>	ix
Preamble	1
Notes	7
1 Introduction to case-control studies	8
1.1 Defining a case-control study	8
1.2 Measuring association: the odds ratio	12
1.3 Methods for controlling confounding	13
1.4 Temporal aspects	16
1.5 Further details on the sampling of cases and controls	20
1.6 Bias in case-control studies	23
1.7 Use of case-control studies	26
Notes	29
2 The simplest situation	31
2.1 Preliminaries	31
2.2 Measuring association	34
2.3 Statistical analysis	36
2.4 Model formulation	42
2.5 Design implications for the numbers of cases and controls	44
2.6 Logistic dependence	45
2.7 Explanatory variable with more than two levels	47
2.8 Conditional odds ratios: combining estimates	48
2.9 A special feature of odds ratios	51
2.10 Introducing time	54
2.11 Causality and case-control studies	57
Notes	59
3 Matched case-control studies	62
3.1 Preliminaries	62
3.2 Choice of matched controls	63

vi	<i>Contents</i>	
3.3	Analysis of matched data	65
3.4	Discussion	70
3.5	Alternative analyses of matched data	71
3.6	Overmatching	73
3.7	Further theoretical points	75
3.8	Generalizations: several controls per case	76
3.9	Logistic dependence	78
3.10	Introducing time	80
	Notes	81
4	A general formulation	83
4.1	Preliminaries	83
4.2	Logistic regression for case-control studies	84
4.3	Extensions	89
4.4	More on non-collapsibility	93
4.5	Non-logistic models	97
4.6	Statistical efficiency	99
4.7	Estimating other quantities	102
4.8	Use of the distribution of exposure	104
4.9	Beyond case-control studies: a more general view	105
	Notes	108
5	Case-control studies with more than two outcomes	111
5.1	Preliminaries	111
5.2	Polychotomous case-control studies	111
5.3	Polychotomous studies with matching	117
5.4	More than one control group	119
5.5	Ordered outcome groups	120
5.6	Case-only studies	122
	Notes	130
6	Special sampling designs	132
6.1	Preliminaries	132
6.2	Two-stage sampling design	133
6.3	Likelihood analyses for two-stage studies	143
6.4	Discussion	148
6.5	Special sampling in matched case-control studies	150
6.6	Case-control studies using family members	152
6.7	Augmenting case-control data using family members	155
	Notes	157
7	Nested case-control studies	160
7.1	Preliminaries	160
7.2	The nested case-control design	162

<i>Contents</i>		vii
7.3	Analysis of nested case-control studies	165
7.4	Further comments on analysis	167
7.5	Some extensions	169
7.6	More elaborate sampling procedures	170
7.7	Further comments on the sampling of controls	175
7.8	Some alternative models	176
7.9	Extended use of controls	180
7.10	Estimating absolute risk	182
7.11	Using full-cohort information	184
	Notes	186
8	Case-subcohort studies	191
8.1	Preliminaries	191
8.2	Essential outline of the case-subcohort design	193
8.3	Analysis disregarding time	194
8.4	Case-subcohort study using event times	198
8.5	Size of the subcohort	202
8.6	Stratified case-subcohort studies	204
8.7	Some further approaches	207
8.8	Comparison between nested case-control and case-subcohort studies	208
	Notes	209
9	Misclassification and measurement error	212
9.1	Preliminaries	212
9.2	Misclassification in an exposure variable	214
9.3	Misclassification of cases and controls	218
9.4	Misclassification in matched case-control studies	220
9.5	Error in continuous exposures	221
9.6	Correcting for error in a continuous exposure	228
	Notes	236
10	Synthesis of studies	240
10.1	Preliminaries	240
10.2	Some large-sample methods	241
10.3	Graphical representation	243
10.4	Study heterogeneity	244
10.5	An exact analysis	248
10.6	Combining studies of different type	250
	Notes	250
Appendix	A theoretical diversion	252
A.1	Preliminaries	252
A.2	Multidimensional parameter	253

viii	<i>Contents</i>	
A.3	The maximum-likelihood estimate	254
A.4	Significance tests	256
A.5	More detailed theory	256
A.6	Pseudo-likelihood	256
A.7	Weighted estimation	258
A.8	Bayesian analysis	258
	Notes	261
	<i>References</i>	262
	<i>Index</i>	281
