|---|---|----------------|
|   | <i>Preface</i>  | <i>page xi</i> |
| 1 | <b>Introduction</b>   | 1              |
| 2 | <b>Thermodynamics</b>   | 16             |
|   | 2.1 The experience of asymmetry in time                             | 16             |
|   | 2.2 The Law of Conservation of Energy                               | 18             |
|   | 2.3 The Law of Approach to Equilibrium                              | 22             |
|   | 2.4 The Second Law of Thermodynamics                                | 25             |
|   | 2.5 The status of the laws of thermodynamics                        | 38             |
| 3 | <b>Classical mechanics</b>  | 40             |
|   | 3.1 The fundamental theory of the world                             | 40             |
|   | 3.2 Introducing classical mechanics                                 | 42             |
|   | 3.3 Mechanical states   | 43             |
|   | 3.4 Time evolution of mechanical states                             | 49             |
|   | 3.5 Thermodynamic magnitudes  | 51             |
|   | 3.6 A mechanical no-go theorem                                      | 56             |
|   | 3.7 The ergodic approach  | 62             |
|   | 3.8 Conclusion  | 71             |
| 4 | <b>Time</b>   | 72             |
|   | 4.1 Introduction: why mechanics cannot underwrite<br>thermodynamics | 72             |
|   | 4.2 Classical kinematics  | 73             |
|   | 4.3 The direction of time and the direction of velocity in time     | 74             |
|   | 4.4 The description of mechanical states                            | 76             |
|   | 4.5 Velocity reversal   | 80             |

|      |   |     |
|------|---|-----|
| 4.6  | Retrodiction  | 84  |
| 4.7  | Time reversal and time-reversal invariance                      | 86  |
| 4.8  | Why the time-reversal invariance of classical mechanics matters | 91  |
| 5    | <b>Macrostates</b>  | 94  |
| 5.1  | The physical nature of macrostates                              | 94  |
| 5.2  | How do macrostates come about?                                  | 97  |
| 5.3  | Explaining thermodynamics with macrostates                      | 105 |
| 5.4  | The dynamics of macrostates                                     | 106 |
| 5.5  | The physical origin of thermodynamic macrostates                | 108 |
| 5.6  | Boltzmann's macrostates   | 111 |
| 5.7  | Maxwell–Boltzmann distribution                                  | 115 |
| 5.8  | The observer in statistical mechanics                           | 119 |
| 5.9  | Counterfactual observers  | 123 |
| 6    | <b>Probability</b>  | 125 |
| 6.1  | Introduction  | 125 |
| 6.2  | Probability in statistical mechanics                            | 126 |
| 6.3  | Choice of measure in statistical mechanics                      | 132 |
| 6.4  | Measure of a macrostate and its probability                     | 136 |
| 6.5  | Transition probabilities without blobs                          | 137 |
| 6.6  | Dependence on observed history?                                 | 139 |
| 6.7  | The spin echo experiments                                       | 143 |
| 6.8  | Robustness of transition probabilities                          | 149 |
| 6.9  | No probability over initial conditions                          | 149 |
| 7    | <b>Entropy</b>  | 153 |
| 7.1  | Introduction  | 153 |
| 7.2  | Entropy   | 154 |
| 7.3  | The distinction between entropy and probability                 | 158 |
| 7.4  | Equilibrium in statistical mechanics                            | 159 |
| 7.5  | Law of Approach to Equilibrium                                  | 160 |
| 7.6  | Second Law of Thermodynamics                                    | 162 |
| 7.7  | Boltzmann's $H$ -theorem  | 164 |
| 7.8  | Loschmidt's reversibility objection                             | 167 |
| 7.9  | Poincaré's recurrence theorem                                   | 170 |
| 7.10 | Boltzmann's combinatorial argument                              | 171 |
| 7.11 | Back to Boltzmann's equation: Lanford's theorem                 | 175 |
| 7.12 | Conclusion  | 178 |

*Contents*

ix

|    |   |     |
|----|---|-----|
| 8  | <b>Typicality</b>   | 182 |
|    | 8.1 Introduction  | 182 |
|    | 8.2 The explanatory arrow in statistical mechanics        | 183 |
|    | 8.3 Typicality  | 184 |
|    | 8.4 Are there natural measures?                           | 186 |
|    | 8.5 Typical initial conditions                            | 187 |
|    | 8.6 Measure-1 theorems and typicality                     | 189 |
|    | 8.7 Conclusion  | 191 |
| 9  | <b>Measurement</b>  | 192 |
|    | 9.1 Introduction  | 192 |
|    | 9.2 What is measurement in classical mechanics?           | 193 |
|    | 9.3 Collapse in classical measurement                     | 200 |
|    | 9.4 State preparation                                     | 202 |
|    | 9.5 The shadows approach                                  | 206 |
|    | 9.6 Entropy   | 207 |
|    | 9.7 Status of the observer                                | 209 |
| 10 | <b>The past</b>   | 212 |
|    | 10.1 Introduction   | 212 |
|    | 10.2 The problem of retrodiction                          | 213 |
|    | 10.3 The Past Hypothesis: memory and<br>measurement       | 216 |
|    | 10.4 The Reliability Hypothesis                           | 219 |
|    | 10.5 Past low entropy hypothesis                          | 222 |
|    | 10.6 Remembering the future                               | 224 |
|    | 10.7 Problem of initial improbable state                  | 226 |
|    | 10.8 The dynamics of the Past Hypothesis                  | 228 |
|    | 10.9 Local and global Past Hypotheses                     | 229 |
|    | 10.10 Past Hypothesis and physics of memory               | 230 |
|    | 10.11 Memory in a time-reversed universe                  | 232 |
| 11 | <b>Gibbs</b>  | 234 |
|    | 11.1 Introduction   | 234 |
|    | 11.2 The Gibbsian method in equilibrium                   | 235 |
|    | 11.3 Gibbsian method in terms of blobs and<br>macrostates | 238 |
|    | 11.4 Gibbsian equilibrium probability distributions       | 240 |
|    | 11.5 The approach to equilibrium                          | 241 |

|            |  |     |
