

Contents

	<i>Preface</i>	<i>page xi</i>
1	Kinematics, Balance Equations, and Principles of Stokes Flow	1
	1.1 Kinematics of Continua	1
	1.1.1 Velocity Fields and the Velocity Gradient	1
	1.1.2 Deformation Tensors	6
	1.2 Conservation Equations	9
	1.2.1 Conservation of Mass	9
	1.2.2 Conservation of Momentum	10
	1.2.3 Boundary Conditions	14
	1.3 General Properties of Stokes Flow	15
	1.3.1 Linearity and Reversibility	15
	1.3.2 Stress Equilibrium	18
	1.3.3 Lorentz Reciprocal Relations	19
	1.3.4 Mechanical Energy Balance and the Minimum Dissipation Principle	20
2	Fundamental Solutions of the Stokes Equation and the Point-Particle Approximation	26
	2.1 Free-Space Green's Function: The Stokeslet	26
	2.2 Point Source and Point Source Dipole	29
	2.3 Force Dipole Solutions: Stresslet and Rotlet	31
	2.4 Multipole Expansion and Average Stress in a Suspension	34
	2.5 Stokes's Law, Hydrodynamic Interactions, and the Mobility of a System of Point Particles	38
	2.6 Regularized Stokeslets	42
	2.7 Periodic Array of Point Forces	44
	2.8 Flow in a Porous Medium and Hydrodynamic Screening	50
3	Beyond Point Particles	55
	3.1 General Solution to the Stokes Equation	55
	3.2 The Stokeslet Revisited	57
	3.3 Spheres in Flow	59
	3.3.1 Translating Sphere	59

viii	Contents	
	3.3.2 Rotating Sphere	60
	3.3.3 Sphere in a General Linear Flow and the Stress in a Dilute Suspension	62
	3.4 A Model Microscale Swimmer	64
	3.5 Faxén's Laws	66
	3.6 Mobility of a System of Spheres	69
	3.7 Nonspherical Rigid Particles	69
	3.8 Rodlike Particle in a Linear Flow and Jeffery Orbits	74
	3.9 Slender Body Theory	77
	3.10 Lubrication Theory	81
	3.11 Stokesian Dynamics	85
4	Fundamental Solutions for Bounded Geometries	90
	4.1 General Reciprocity Result for the Green's Function	90
	4.2 Point Force above a Plane Wall	91
	4.3 Mobility of Point Particles in a Confined Geometry	94
	4.4 Hydrodynamic Migration of Particles in a Confined Geometry	95
	4.5 Point Force in Slit and Tube Geometries: Key Features	97
	4.6 Integral Representation of Stokes Flow and the Boundary Integral Method	98
5	First Effects of Inertia	104
	5.1 Unbounded Uniform Flow around a Sphere at Small but Nonzero Reynolds Number	104
	5.2 Flow Near a Moving Wall: Transient Acceleration and Viscous Diffusion	107
	5.3 Corrections to Stokes Drag for an Accelerating Sphere	109
	5.4 Inertial Migration of a Sphere in Confined Flow	110
	5.5 Steady Streaming Due to Oscillatory Boundary Motion	111
6	Thermal Fluctuations and Brownian Motion	114
	6.1 Brownian Motion of a Particle in Fluid: The Langevin Equation	114
	6.2 Velocity Autocorrelation Function and Properties of the Fluctuating Force	117
	6.3 Thermal Fluctuations and the Navier–Stokes Equation	120
	6.4 Brownian Motion from Fluctuating Hydrodynamics	124
	6.5 Diffusion and Osmotic Stress	126
	6.6 Diffusion and the Velocity Autocorrelation: The Taylor–Green–Kubo Formula for Diffusion	128
	6.7 Time-Integration of the Inertialess Langevin Equation: “Basic Brownian Dynamics”	129
	6.8 Generalized Langevin Equations and Memory	132
	6.9 Brownian Fluctuations as a Thermodynamic Driving Force: The Smoluchowski Equation	133
7	Stochastic Differential Equations	139
	7.1 The Diffusion Equation and the Wiener Process	139

7.2	Elementary Stochastic Calculus	143
7.3	Time Evolution of the Probability Density for a Stochastic Differential Equation	147
7.4	The Langevin Equation Revisited	149
7.4.1	Inertial Dynamics	149
7.4.2	From Inertial to Inertialess: The High Friction Limit	151
7.5	Coordinate Transformations and Constraints	156
7.5.1	Diffusion on a Plane in Cartesian and Polar Coordinate Systems	156
7.5.2	Stochastic Processes with Constraints: Diffusion on a Circle or Sphere	158
7.6	Rotational Diffusion and the Wormlike Random Walk	161
7.7	Coupled Rotational and Translational Diffusion	166
8	Coarse-Grained Models of Polymers in Dilute Solution	170
8.1	Models of Equilibrium Polymer Structure	170
8.1.1	Wormlike Chain	171
8.1.2	Freely Jointed Chain and Gaussian Chain	173
8.2	Bead–Spring Chain	175
8.3	Diffusivity of a Polymer Chain in Solution	179
8.4	Equilibrium Dynamics of Internal Degrees of Freedom: The Relaxation Spectrum	183
8.5	Polymer Contribution to the Stress Tensor	186
8.6	Bead–Spring Dumbbell Model	188
8.7	Rigid Rod Model	193
9	Rheology and Viscoelastic Flow Phenomena	201
9.1	Fundamentals of Linear Viscoelasticity	201
9.1.1	The Relaxation Modulus and the Weissenberg Number	201
9.1.2	Frequency Response of a Viscoelastic Material	204
9.2	Brownian Motion in a Viscoelastic Fluid: Linear Microrheology	211
9.3	Nonlinear Viscoelasticity: Shear and Extensional Flows	216
9.3.1	Simple Shear Flow: Normal Stress Differences and Cross-stream Migration	216
9.3.2	Flow in a Curved Channel: Hoop Stress and Viscoelastic Flow Instability	218
9.3.3	Uniaxial Extension: Extensional Viscosity and the Trouton Ratio	222
9.3.4	Effects of Finite Extensibility on Shear and Extensional Flows: Scaling Arguments	224
9.4	Material Frame Indifference and Models of Viscoelastic Fluids	227
Appendix	Mathematical Background	237
