RISK GOVERNANCE OF OFFSHORE OIL AND GAS OPERATIONS

This book evaluates and compares risk regulation and safety management for offshore oil and gas operations in the United States, United Kingdom, Norway, and Australia. It provides an interdisciplinary approach with legal, technological, regulatory, behavioral, and sociological perspectives on these efforts to prevent major accidents and improve safety performance offshore. Presented in three parts, the book begins with discussion of the concept of risk governance, the role and modes of safety regulation, and the behavioral and other factors involved in developing an effective regulatory regime for industrial safety. It then discusses the four regimes for offshore safety, the industry's role, cultural and other contextual influences, and use of safety performance indicators. The final section focuses on the Norwegian regime, which features self-regulation and worker rights, and its capacity to respond to new offshore technologies, emerging risks, near-miss incidents, and other challenges. Discussion throughout the book provides insights about differing types of rules, inspection methods, enforcement, and other issues relevant to the quest for robust regulation and the development of a safety culture for preventing major accidents offshore. This book will be informative for those in government, industry, academia, and elsewhere in society who are interested in industrial safety in general and offshore safety in particular.

Preben Hempel Lindøe is Professor of Societal Safety at the University of Stavanger, Norway. He has an MS and a PhD on the implementation of “enforced self-regulation.” He has worked within applied research for twenty-five years, including action-research methodology, occupational health and safety, risk regulation, and safety management. His publications include various books (in Norwegian) as well as articles, papers, and chapters in professional and academic journals, books, and other media.

Michael Baram is Professor Emeritus at Boston University Law School where he directed the Center for Law and Technology. He was also a partner in the law firm Bracken and Baram for twenty-five years, and previously was Associate Professor of Engineering and Assistant Dean at MIT. His research, publications, legal work, and advisory activities have dealt with risk regulation, environmental law, product liability law, occupational safety, and risk management in several technological sectors, including the chemicals, biotech, nuclear, and oil and gas industries. He is the author or editor of eight books including *Safety Management* (with Andrew Hale) and has published numerous articles.

Ortwin Renn is Professor and Chair of Environmental Sociology and Technology Assessment at Stuttgart University, Germany. He directs the Stuttgart Research Center for Interdisciplinary Risk and Innovation Studies at Stuttgart University (ZIRIUS) and the nonprofit company DIALOGIK, a research institute for the investigation of communication and participation processes in environmental policy making. Renn is primarily interested in risk governance, political participation, and technology assessment. He has published more than 30 books and 250 articles, most prominently the monograph *Risk Governance* (2008).

Contributors

Paul Bang has been working as a senior advisor in the Norwegian Petroleum Directorate (NPD) and Petroleum Safety Authority Norway (PSA) (from 2004) since 1987. He works particularly with regulatory issues giving advice for institutional arrangements, regulation making, and enforcement of regulation in petroleum activities. He holds a BSc in Organizational and Political Science from Universities in Bergen and Stavanger. He is also engaged in the Norwegian government's work in third-world countries through the Norwegian aid program Oil for Development (OfD).

Michael Baram is Professor Emeritus, Boston University Law School, where he directed the Center for Law and Technology. He was also a partner in the law firm Bracken and Baram for twenty-five years and was Associate Professor of Engineering and Assistant Dean at Massachusetts Institute of Technology. His research, publications, legal work, and advisory activities have dealt with risk regulation, environmental law, product liability law, occupational safety, and risk management issues in several technological sectors, including the chemicals, biotech, nuclear, and oil and gas industries.

Helene Cecilie Blakstad is Senior Safety and Quality Advisor in the Norwegian National Rail Administration. From 2006 until 2012, she worked as a Senior Scientist at SINTEF Technology and Society, Department of Safety Research. Earlier, she worked within occupational health services and with the Norwegian Labour Inspectorate. She has a PhD on adapting hierarchical and risk-based approaches to safety rule modifications in the Norwegian railway system.

Ole Andreas Engen is Professor at University of Stavanger within the field of Risk Management and Societal Safety. He holds an MPhil in Economics and a PhD in Sociology. He is also employed part time as a senior research scientist at the International Research Institute of Stavanger (IRIS).

Ulla Forseth is Associate Professor in the Department of Sociology and Political Science, Norwegian University of Science and Technology (NTNU), Trondheim, Norway. She holds a Dr.polit. in Sociology. Until recently she worked as a senior scientist in the SINTEF Department of Industrial Management. Her research interests include work and organization, power and resistance, change processes in society, and occupational health and safety.

Andrew Hale has a background in occupational psychology. He is Emeritus Professor of Safety Science from the Delft University of Technology in the Netherlands, where he worked for twenty-five years. Since 2008 he has been chairman of the consultancy HASTAM (Health & Safety Technology & Management) in the United Kingdom. One of his areas of study has been the management of safety rules and regulations at both company and national levels across a range of industries including transport, oil and gas, and other major hazard areas.

Jan Hayes has twenty-five years' experience in safety and risk management. Her current activities cover academia, consulting, and regulation. She holds a Senior Research Fellow appointment at the Australian National University where she is Program Leader for the social science research activities of the Energy Pipelines Co-operative Research Centre. Dr. Hayes is a member of the Advisory Board of the Australian National Offshore Petroleum Safety and Environmental Management Authority.

Knut Kaasen is Professor of Law at the Scandinavian Institute of Maritime Law, University of Oslo, and is presently Head of the Institute's Department of Petroleum and Energy Law. He has served as acting Justice of the Supreme Court of Norway and Dean and Associate Dean of the Faculty of Law. Prior to becoming professor in 1989, he served as an assistant district judge and a counsel in the legal department of Norsk Hydro a.s. The subject of his doctoral dissertation (1984) was safety regulation of offshore petroleum activities. Over the last twenty-five years he has been closely involved in developing agreed forms of contract in the petroleum industry.

Jacob Kringen is senior advisor at the Norwegian Directorate of Civil Protection and Emergency Planning and an associate professor at the University of Stavanger. He has an MSc in Anthropology and a PhD in Science and Technology studies from the University of Oslo. His main fields of interest have been Norwegian government administration, risk regulation and governance, and public management.

Preben Hempel Lindøe is Professor at University of Stavanger in the field of Risk Management and Societal Safety. He has a PhD on the implementation of "enforced self-regulation" in Norway. For a period of twenty-five years he has worked within applied research, including action research methodology, occupational health and safety, risk regulation, and safety management.

Kathryn Mearns spent twenty years working in academia, before taking up a new role as a Human Factors Specialist Inspector with the Offshore Division of the UK Health and Safety Executive in 2012. She has published extensively in the area of human factors in health and safety in a range of industries including offshore oil and gas, air traffic management, and health care. She continues to be involved in human factors research through a part-time professorship at the University of Bergen.

John Paterson is Professor of Law and Co-Director of the Centre for Energy Law at the University of Aberdeen, United Kingdom. His research has focused on the regulation of risk, not least in the offshore hydrocarbon industry, and he has been involved in a number of multidisciplinary research projects dealing with risk governance. He is the co-editor of *Oil and Gas Law: Current Issues and Emerging Trends* and is active in teaching, PhD supervision, training, and consultancy in this field.

Ortwin Renn serves as full professor and Chair of Environmental Sociology and Technology Assessment at Stuttgart University, Germany. He directs the Stuttgart Research Center for Interdisciplinary Risk and Innovation Studies at Stuttgart University (ZIRUS) and the non-profit company DIALOGIK, a research institute for the investigation of communication and participation processes in environmental policy making. Renn also serves as Adjunct Professor for “Integrated Risk Analysis” at Stavanger University, Norway; as Affiliate Honorary Professor at the Technical University of Munich; and as Affiliate Professor for Risk Governance at Beijing Normal University. Renn is primarily interested in risk governance, political participation, and technology assessment. He has published more than 30 books and 250 articles, most prominently the monograph *Risk Governance* (2008).

Ragnar Rosness is senior scientist in the Department of Safety Research at SINTEF in Trondheim, Norway. He holds an MSc in psychology and a PhD in industrial engineering. He conducts research mainly in the petroleum industry and the transportation sector. His research interests focus on the links between organizing, decision making, power, and resilience.

Helge Ryggvik (PhD) is an economic historian, working as a researcher at the Centre for Technology, Innovation and Culture at the University of Oslo. He has been working on business history, workplace relations, and safety themes for years. He is the author of several books on oil-related issues, including a history of Norwegian offshore contractors, and he published a history of the Norwegian Railways. Most recently, he has completed a report comparing Norwegian and U.S. offshore regulations.

Olaf Thuestad previously worked in the Norwegian Petroleum Directorate (NPD) and then as director of Regulatory Development at the Norwegian Petroleum Safety Authority (PSA) from 2004, when it was established, until 2010. He is now senior

strategic advisor at PSA. He holds a BSc in Civil Engineering and has had a central role in the formulation of strategies for, and development of, HSE regulations for the petroleum sector from the early 1980s.

Emre Üşenmez is a lecturer in oil and gas law and an associate at the Aberdeen University Centre for Energy Law (AUCEL). He is the co-editor of *Oil and Gas Law: Current Issues and Emerging Trends* and the director of Lex Petrolea Limited, a business consultancy firm in oil and gas. Previously he worked in the natural resources sector in Azerbaijan. He holds an LLM in Oil and Gas Law from the University of Aberdeen, and he is currently working toward an MSc in Petroleum, Energy Economics, and Finance and a joint PhD in Oil and Gas Law and Petroleum Economics.

Preface

Modern society is increasingly dependent on technological strength and its careful application by complex enterprises to ensure public well-being and the achievement of other important goals. A prime example is the use of new technologies to meet global energy needs that are essential for the fulfillment of these goals.

The exploration and production of offshore oil and gas resources have become important means of meeting global energy needs. More than 90 percent of the oil and gas produced by EU member states and Norway is now derived from offshore production, mainly in the North Sea and the Norwegian Sea. Offshore operations also account for a substantial part of the oil and gas produced by the United States and Australia and are of growing importance to Canada, Brazil, and many other countries.

These offshore activities involve sophisticated analytic methods, heavy engineering, large-scale investment, and complex projects, and they must be managed appropriately to ensure that benefits are gained without incurring major accidents and other unacceptable harms to the public, the workers involved, and the human and natural environments. This requires partnership between public regulators and industry, the involvement of labor and other stakeholders, a supporting role for researchers, mutual trust that best practices will be used and continuously improved, and much more.

However, major accidents such as the Macondo blowout and oil spill in the Gulf of Mexico in 2010 demonstrate that simultaneously ensuring productivity and safety is a major challenge, particularly in deepwater regions and other difficult locales. To meet this challenge, leading countries have developed regulatory regimes that differ in several respects, particularly with regard to supervising and fostering self-regulation by industry, and all are engaged in a continuing quest for increasingly robust regulation.

From economic, environmental, and safety perspectives, the robustness of the regulatory regimes that govern the safety of offshore activities is of critical importance

to all. In this regard, the research community plays a key role by contributing knowledge from many disciplines, which can improve the performance of the regimes and the offshore industry.

This book is the result of a common effort by a select group of researchers over several years. Their research and its integration has been enabled by a major research project, “Robust Regulation in the Petroleum Sector,” which has been funded by the Research Council of Norway. The aim of the project has been to provide knowledge that can be used to develop and support robust regulation and inclusive risk governance for the complex and dynamic field of offshore oil and gas operations by addressing four objectives:

- conceptualization and better understanding of the resilience of the Norwegian risk regulation regime, which many other countries look to as a model;
- comparison of the Norwegian regime with other leading regimes to further improvements in an international context;
- examination of the interface between a regulatory regime and industrial safety management systems; and
- dissemination of research-based knowledge to promote learning about robust risk regulation and the challenges involved in its implementation.

The Macondo disaster in 2010 increased the significance of the project because it put the quest for robust regulation on the public agenda in all countries with offshore oil and gas resources. This led the core group of Norwegian researchers to extend their project by inviting researchers from the United Kingdom, United States, Germany, and Australia to join them and produce results of international relevance.

Finally, we believe this book demonstrates the value of learning from various disciplines and from safety research done in other technological and industrial domains, and we believe it provides knowledge in return and hope it contributes to risk reduction and improved safety performance in offshore operations and these other domains.

Preparing this book has been an inspiring and learning process. We are thankful for the cooperation of the contributing authors and of Cambridge University Press, as well as for the financial support of the Research Council of Norway.
