	Index	619
stimulus evaluation checks, emotional processes, Scherer 507	text analysis software 92–93	
stimulus structure	texture discrimination in images 250–52	
edges and blobs in fractals 74–75	theater and dance 337–39	
linear versus painterly dimension 74	actors and dancers 339	
storytelling, adaptive value of 180	actors 339–43	
strawberry photograph study 254–55	dancers 343–46	
streetscapes 411–12	audience effects 352	
structural organization of a painting’s	dance 355–56	
composition 222	theater 353–55	
first-order pictorial elements 222–27	future directions 356–58	
second-order perceptual qualities 228–33	transfer of arts skills to non-arts skills 346, 352	
semantic level 233–37	dance 350–52	
structures/objects in the built environment 392	theater 346–50	
style 128–29	theater-goers, expectations of 67–68	
changes in following brain damage 486–87	theory of mind	
linear versus painterly, edges 224–25	actors 342	
and subject matter 62, 235–37	training in acting 348–49	
urbanscapes 405–6	tilt-shift miniaturization, photography 267	
subject matter (semantics)	time	
content in photographs 244	and automatic responses 506–7	
and style, paintings 235–37	course of, aesthetic experience 75–76	
versus visual style (syntactics) 62	diachronia and ipsichronia 23	
subjective approach to aesthetics 239–40	passage of, aesthetic episodes 76–77	
subjective experience/feeling 513–14	and photographs 246	
subjective measures 96, 100	early gaze 256–57	
Consensual Assessment Technique (CAT) 96–100	the first second 256	
open-ended interviews 100	processing of style versus content 236	
Sullivan, Louis, Guaranty Building 400	spent looking at artworks, museum visitors 209–10	
superior temporal sulcus (STS), role in facial attractiveness 429	titles	
Surrealism	aiding processing fluency and content	
Surrealist films, preference for and personality 550	accessibility 234–35	
Surrealist texts, preference for and personality 550	extra information from 130–33	
symbolic behavior, origins of 187–88	top-down approach 12, 597	
symbolic meaning conveyed by art 13–14	art historical approaches, Panofsky 127–28	
symbolic musical meaning 314	and art-related knowledge 204	
symbolism and brain damage 490–91	imposition on visual scene 13–14	
symmetry and facial attractiveness 423	information processing models 22	
syntactic integration, music structure 324	Fechner’s 115–18	
syntactic processing, music	touch	
element extraction 323–24	aesthetics of 282	
and language-syntactic processing 308–9	unity-in-variety 292	
neural correlations 305–7	traditional aesthetic states 519–20	
phrase boundaries 309	traditional art <i>see</i> representational art	
syntactic incongruities 309–10	training in the arts <i>see</i> education in the arts	
syntactic structure building, music 304–5, 323–24	transfer of arts skills to non-arts skills 346, 352	
syntactic versus semantic information 62	dance	
taste, unity-in-variety 292	academic skills 350–51	
tension relief, essential function of art 176–77	creativity 351–52	
	social skills 351	
	theater	
	academic skills 346–47	
	creativity 350	
	social skills 347–50	
	transformative aesthetic experience model of	
	crying 529–30	
	transportation issues, built environment 411–12
