

CONTENTS

<i>Preface</i>	<i>page vii</i>
1. Introduction to fine needle and core biopsy: Techniques	1
2. Protocols for FNB, core biopsies, and ancillary techniques	15
3. Diagnosis of lymph node FNB using pattern recognition and cell type assessment in an algorithmic approach	29
4. Diagnosis of lymphoma on FNB lymph node material and the role of core biopsy	38
5. Metastases to lymph nodes	55
6. Suppurative and suppurative–granulomatous patterns	81
7. Granulomatous pattern	99
8. Necrotizing pattern	115
9. Follicle germinal center tissue fragments in dispersed, heterogeneous, predominantly small to intermediate lymphoid cell pattern with small lymphocytes predominating: Follicular hyperplasia	124
10. Follicular center cell tissue fragments in a dispersed heterogeneous small to intermediate lymphoid cell pattern, with centrocytes and centroblasts predominating: Follicular and marginal zone lymphomas	142
11. Dispersed heterogeneous small to intermediate lymphoid cell pattern with small lymphocytes predominating, plus prominent immunoblasts: Immunoblastic reactive lymph nodes	158
12. Dispersed heterogeneous small to intermediate lymphoid cell pattern with small lymphocytes predominating, plus other inflammatory cells and large “alien” cells: Hodgkin lymphoma	168
13. Dispersed heterogeneous small to intermediate lymphoid cell pattern with small lymphocytes predominating, plus prominent histiocytes: Sinus histiocytosis	179
14. Dispersed monotonous predominantly small to intermediate lymphoid cell pattern, with no predominance of small lymphocytes, with or without vague nodularity: Small cell lymphomas	191

CONTENTS

---

15. Dispersed monotonous predominantly intermediate to large lymphoid cell pattern: Large cell lymphomas	208
16. Pediatric lymphadenopathy	227
17. Fine needle biopsy of spleen	237
<i>Index</i>	266
