 token causality and, 73
 time window inference, 208–209
 algorithm for, 130–132
 assumptions, 129–130
 distinction from DBNs, 130
 empirical results, 190–195
 intuitions behind, 127–129
 relationships to be refined, 130
- timing
 difference between type and token,
 154
 token causality, 7–8, 15, 33n25
 belief and, 153, 214–215
 computational methods, 148, 209–210
 data and, 149
 definition of, 142–143
 differences from type causality, 143–145
 examples of, 161–170
 importance of time for, 148–149
 need for automating, 145–146
 overdetermination and, 170–173
 overview of approach to, 150–151
 philosophical approaches to, 146–147
 preemption and, 101, 173–174
 probabilistic, 30–32
 psychological approaches to, 147–148,
 149
 redundant causation and, 170–174
 structural equation models and, 33n25
 transitivity and, 174–175
- token causes
 distinguishing between multiple
 instances, 162
 hypotheses for, 151–153
 probability of, 158–159
 representing, 148
 significance of, 153–157
 truth value of, 159–160
- token-level observation sequence, 156
 token-level significance
 algorithm for evaluating, 157–161
 measure of, 156
 with incomplete information, 156
 with uncertain timing, 156–157
- total probability (law of), 48
 total transition function, 53, 58, 106
- traces
 example of testing formula in, 114–115
 model checking and, 113–114
 satisfaction of formulas in, 116–120
- transitivity, 17, 210
 abstraction and, 102
 example, 102–103
 token causality and, 174–175, 177
- truth value of variables, 113
 Turing test, 71
- umbrella vendors and rain, 13
 uncertainty, temporal, 10, 153, 156–157,
 172
- unless formulas
 satisfaction of in traces, 117

Index
