

Biology, Religion, and Philosophy

The intersection of biology and religion has spawned exciting new areas of academic research that raise issues central to understanding our own humanity and the living world. In this comprehensive and accessible survey, Michael L. Peterson and Dennis R. Venema explain the engagement between biology and religion on issues related to origins, evolution, design, suffering and evil, progress and purpose, love, humanity, morality, ecology, and the nature of religion itself. Does life have a chemical origin – or must there be a divine spark? How can religious claims about divine goodness be reconciled with widespread predation, suffering, and death in the animal kingdom? Peterson and Venema develop a philosophical discussion around such controversial questions. The book situates each topic in its historical, scientific, and theological context, making it the perfect introduction for upper level undergraduates, graduate students, scholars, and interested general readers.

MICHAEL L. PETERSON is Professor of Philosophy at Asbury Theological Seminary. He is author of numerous books, including *C. S. Lewis and the Christian Worldview* (2020) and *Reason and Religious Belief* (with William Hasker, Bruce Reichenbach, and David Basinger, 2012). He is coauthor, with Michael Ruse, of *Science, Evolution, and Religion: A Debate about Atheism and Theism* (2016).

DENNIS R. VENEMA is Professor of Biology at Trinity Western University, where he specializes in molecular biology and genetics. He is coauthor, with Scot McKnight, of *Adam and the Genome: Reading Scripture after Genetic Science* (2017).

Acknowledgments

We would like to thank a number of persons who helped greatly in the production of this book. Susan Olin proofread the original manuscript and offered insightful advice. Mara Eller proofread during later stages of production and provided suggestions for further improvement. Chris Holland and Robert Williams, our research assistants, worked diligently on many aspects of the book, from checking the accuracy of citations to providing commentary on readability.

We would also like to thank our editor, Hilary Gaskin, who gave guidance during the book's preparation. Perhaps less visible – but still so very important to the eventual appearance of the book – is our series editor, Michael Ruse. It was Michael who had the initial vision for this kind of project and enlisted us in the service of that cause.

Last, we thank our families – wives, children, and grandchildren – who were supportive and patient during our writing, and we dedicate the book to them.
