<i>Introduction</i>	<i>page xi</i>
<b>PART I FAMILIAR VECTOR SPACES</b>	<b>1</b>
<b>1 Gaussian elimination</b>	<b>3</b>
1.1 Two hundred years of algebra	3
1.2 Computational matters	8
1.3 Detached coefficients	12
1.4 Another fifty years	15
1.5 Further exercises	18
<b>2 A little geometry</b>	<b>20</b>
2.1 Geometric vectors	20
2.2 Higher dimensions	24
2.3 Euclidean distance	27
2.4 Geometry, plane and solid	32
2.5 Further exercises	36
<b>3 The algebra of square matrices</b>	<b>42</b>
3.1 The summation convention	42
3.2 Multiplying matrices	43
3.3 More algebra for square matrices	45
3.4 Decomposition into elementary matrices	49
3.5 Calculating the inverse	54
3.6 Further exercises	56
<b>4 The secret life of determinants</b>	<b>60</b>
4.1 The area of a parallelogram	60
4.2 Rescaling	64
4.3 $3 \times 3$ determinants	66
4.4 Determinants of $n \times n$ matrices	72
4.5 Calculating determinants	75
4.6 Further exercises	81

<b>5</b>	<b>Abstract vector spaces</b>	<b>87</b>
5.1	The space $\mathbb{C}^n$	87
5.2	Abstract vector spaces	88
5.3	Linear maps	91
5.4	Dimension	95
5.5	Image and kernel	103
5.6	Secret sharing	111
5.7	Further exercises	114
<b>6</b>	<b>Linear maps from <math>\mathbb{F}^n</math> to itself</b>	<b>118</b>
6.1	Linear maps, bases and matrices	118
6.2	Eigenvectors and eigenvalues	122
6.3	Diagonalisation and eigenvectors	125
6.4	Linear maps from $\mathbb{C}^2$ to itself	127
6.5	Diagonalising square matrices	132
6.6	Iteration's artful aid	136
6.7	$LU$ factorisation	141
6.8	Further exercises	146
<b>7</b>	<b>Distance preserving linear maps</b>	<b>160</b>
7.1	Orthonormal bases	160
7.2	Orthogonal maps and matrices	164
7.3	Rotations and reflections in $\mathbb{R}^2$ and $\mathbb{R}^3$	169
7.4	Reflections in $\mathbb{R}^n$	174
7.5	$QR$ factorisation	177
7.6	Further exercises	182
<b>8</b>	<b>Diagonalisation for orthonormal bases</b>	<b>192</b>
8.1	Symmetric maps	192
8.2	Eigenvectors for symmetric linear maps	195
8.3	Stationary points	201
8.4	Complex inner product	203
8.5	Further exercises	207
<b>9</b>	<b>Cartesian tensors</b>	<b>211</b>
9.1	Physical vectors	211
9.2	General Cartesian tensors	214
9.3	More examples	216
9.4	The vector product	220
9.5	Further exercises	227

<b>10</b>	<b>More on tensors</b>	<b>233</b>
10.1	Some tensorial theorems	233
10.2	A (very) little mechanics	237
10.3	Left-hand, right-hand	242
10.4	General tensors	244
10.5	Further exercises	247
	<b>PART II GENERAL VECTOR SPACES</b>	<b>257</b>
<b>11</b>	<b>Spaces of linear maps</b>	<b>259</b>
11.1	A look at $\mathcal{L}(U, V)$	259
11.2	A look at $\mathcal{L}(U, U)$	266
11.3	Duals (almost) without using bases	269
11.4	Duals using bases	276
11.5	Further exercises	283
<b>12</b>	<b>Polynomials in <math>\mathcal{L}(U, U)</math></b>	<b>291</b>
12.1	Direct sums	291
12.2	The Cayley–Hamilton theorem	296
12.3	Minimal polynomials	301
12.4	The Jordan normal form	307
12.5	Applications	312
12.6	Further exercises	316
<b>13</b>	<b>Vector spaces without distances</b>	<b>329</b>
13.1	A little philosophy	329
13.2	Vector spaces over fields	329
13.3	Error correcting codes	334
13.4	Further exercises	340
<b>14</b>	<b>Vector spaces with distances</b>	<b>344</b>
14.1	Orthogonal polynomials	344
14.2	Inner products and dual spaces	353
14.3	Complex inner product spaces	359
14.4	Further exercises	364
<b>15</b>	<b>More distances</b>	<b>369</b>
15.1	Distance on $\mathcal{L}(U, U)$	369
15.2	Inner products and triangularisation	376
15.3	The spectral radius	379
15.4	Normal maps	383
15.5	Further exercises	387

x

*Contents*

<b>16</b>	<b>Quadratic forms and their relatives</b>	<b>399</b>
16.1	Bilinear forms	399
16.2	Rank and signature	407
16.3	Positive definiteness	414
16.4	Antisymmetric bilinear forms	421
16.5	Further exercises	425
	<i>References</i>	438
	<i>Index</i>	440
