|----------|--|---------------|
|          | <b>Introduction</b>  | <i>page</i> 1 |
| <b>1</b> | <b>Kinematics and vectors</b>                                      | 5             |
|          | 1.1 Kinematics   | 5             |
|          | 1.2 Vectors  | 9             |
|          | 1.3 Vector kinematics  | 10            |
|          | 1.4 Vector multiplication operations (dot and cross products)      | 11            |
|          | 1.5 Curvilinear motion: velocity and acceleration on a curved path | 15            |
|          | Chapter 1 problems   | 17            |
| <b>2</b> | <b>Newton's Laws, energy, and momentum</b>                         | 19            |
|          | 2.1 Newton's Laws  | 19            |
|          | 2.2 The Third Law and momentum conservation                        | 22            |
|          | 2.3 Work–Energy Theorem  | 25            |
|          | 2.4 Normal forces and frictional forces                            | 28            |
|          | 2.5 Conservation of momentum and energy: elastic collisions        | 32            |
|          | Chapter 2 problems   | 36            |
| <b>3</b> | <b>Rotational motion</b>   | 39            |
|          | 3.1 Rotational motion and moment of inertia                        | 39            |
|          | 3.2 Moment of inertia of a solid body                              | 41            |
|          | 3.3 Center of mass (COM) and parallel axis theorem                 | 42            |
|          | 3.4 Tensor moments of inertia                                      | 44            |
|          | 3.5 Torque and angular momentum                                    | 46            |
|          | 3.6 Torques acting on inertial tensor                              | 50            |
|          | 3.7 Torques around an arbitrary axis: statics                      | 53            |
|          | Chapter 3 problems   | 55            |
| <b>4</b> | <b>Rotation matrices</b>   | 57            |
|          | 4.1 Vectors in rotated coordinate systems                          | 57            |
|          | 4.2 Tensors in rotated coordinate systems                          | 59            |
|          | 4.3 Semiconductor effective masses                                 | 64            |
|          | 4.4 Conductivity effective mass                                    | 66            |
|          | Chapter 4 problems   | 70            |

|           |   |     |
|-----------|---|-----|
| vi        | <b>Contents</b>   |     |
| <b>5</b>  | <b>Materials properties: elasticity</b>   | 73  |
|           | 5.1 Tensile/compressive elasticity  | 73  |
|           | 5.2 Shear elasticity  | 76  |
|           | 5.3 Bulk elasticity (hydraulic stress)  | 78  |
|           | 5.4 Unified treatment of elasticity   | 79  |
|           | Chapter 5 problems  | 85  |
| <b>6</b>  | <b>Harmonic oscillation</b>   | 89  |
|           | 6.1 Damped harmonic oscillator  | 90  |
|           | 6.2 Driven harmonic oscillator  | 93  |
|           | 6.3 Lorentzian oscillator: an LCR resonant circuit                                | 96  |
|           | Chapter 6 problems  | 99  |
| <b>7</b>  | <b>Waves</b>  | 101 |
|           | 7.1 One-dimensional waves: waves in strings                                       | 101 |
|           | 7.2 Harmonic waves  | 104 |
|           | 7.3 Addition of waves: interference, reflection, standing waves,<br>and beats     | 106 |
|           | 7.4 Sound waves in fluids   | 108 |
|           | 7.5 Three-dimensional plane waves   | 111 |
|           | 7.6 Propagation in absorbing media  | 112 |
|           | 7.7 Reflection and refraction of plane waves at an interface<br>between two media | 114 |
|           | 7.8 Interference on reflection from a layer                                       | 118 |
|           | 7.9 Spherical waves   | 121 |
|           | 7.10 Huygens's Principle and wave diffraction                                     | 122 |
|           | 7.11 Fresnel–Kirchhoff diffraction  | 124 |
|           | Chapter 7 problems  | 127 |
| <b>8</b>  | <b>The quantum puzzle</b>   | 131 |
|           | 8.1 The photoelectric effect and photons  | 131 |
|           | 8.2 Louis de Broglie and matter waves   | 138 |
|           | Chapter 8 problems  | 145 |
| <b>9</b>  | <b>Quantum mechanics</b>  | 148 |
|           | 9.1 Postulates of quantum mechanics   | 148 |
|           | 9.2 Quantum tunneling through a barrier   | 156 |
|           | 9.3 One-dimensional infinite quantum well   | 159 |
|           | 9.4 Numerical solution of Schrödinger's equation                                  | 163 |
|           | Chapter 9 problems  | 168 |
| <b>10</b> | <b>Quantum electrons in atoms, molecules, and materials</b>                       | 172 |
|           | 10.1 Schrödinger's equation in three dimensions                                   | 172 |
|           | 10.2 Free electrons in three dimensions (3D) (free-electron metals)               | 173 |

|           |   |     |
|-----------|---|-----|
| 10.3      | Application: scanning tunneling microscope (STM)                                      | 176 |
| 10.4      | Quantum dots  | 179 |
| 10.5      | The hydrogen atom   | 180 |
| 10.6      | Multi-electron atoms (electronic configuration of the elements in the periodic table) | 184 |
| 10.7      | Atomic wave functions, chemical bonds, and hybridization                              | 185 |
|           | Chapter 10 problems   | 190 |
| <b>11</b> | <b>Quantum electrons in solids</b>  | 193 |
| 11.1      | Kronig–Penney potential, Bloch’s theorem, and energy bands                            | 193 |
| 11.2      | Metals, insulators, and semiconductors  | 198 |
| 11.3      | Effective masses in semiconductors  | 201 |
| 11.4      | Optical absorption in solids  | 202 |
| 11.5      | Stimulated and spontaneous optical emission   | 205 |
| 11.6      | Low-dimensional systems: 2D electron gas (GaAs/GaAlAs heterostructure)                | 206 |
|           | Chapter 11 problems   | 209 |
| <b>12</b> | <b>Thermal physics: energy, heat, and thermodynamics</b>                              | 212 |
| 12.1      | Thermal equilibrium   | 212 |
| 12.2      | The equipartition theorem   | 213 |
| 12.3      | Quantum deviations from equipartition theorem   | 217 |
| 12.4      | Equation of state   | 219 |
| 12.5      | Thermal expansion   | 223 |
| 12.6      | The First Law of Thermodynamics: Work–Energy Theorem                                  | 226 |
| 12.7      | Examples of the First Law of Thermodynamics   | 227 |
| 12.8      | Molar specific heats, $c_V$ vs. $c_p$ for an ideal gas                                | 231 |
| 12.9      | Enthalpy  | 233 |
| 12.10     | Entropy and the Second Law of Thermodynamics  | 234 |
| 12.11     | Heat engines  | 239 |
| 12.12     | The Third Law of Thermodynamics   | 240 |
| 12.13     | Free energy   | 240 |
| 12.14     | Heat transfer mechanisms  | 247 |
|           | Chapter 12 problems   | 251 |
| <b>13</b> | <b>Quantum statistics</b>   | 255 |
| 13.1      | Occupancy of states in equilibrium at temperature $T$                                 | 257 |
| 13.2      | Blackbody radiation   | 259 |
| 13.3      | Consequence of thermodynamics for blackbody emission                                  | 264 |
| 13.4      | Application of quantum statistics of fermions: doped semiconductors                   | 266 |
| 13.5      | A p-n junction diode  | 273 |
| 13.6      | Photodiode detectors and photocells   | 277 |
|           | Chapter 13 problems   | 278 |

|           |  |     |
|-----------|--|-----|
| <b>14</b> | <b>Maxwell's equations and electromagnetism</b>                          | 282 |
|           | 14.1 Vector fields   | 282 |
|           | 14.2 Vector operators  | 283 |
|           | 14.3 Gauss's theorem   | 285 |
|           | 14.4 Stokes' theorem   | 287 |
|           | 14.5 Vector calculus identities  | 288 |
|           | 14.6 Maxwell's equations   | 289 |
|           | 14.7 Electromagnetic potentials  | 292 |
|           | 14.8 Maxwell's equations in integral form                                | 293 |
|           | 14.9 Applications of Faraday's Law                                       | 307 |
|           | Chapter 14 problems  | 313 |
| <b>15</b> | <b>Electromagnetic waves</b>   | 317 |
|           | 15.1 Maxwell's equations and electromagnetic waves in free space         | 317 |
|           | 15.2 EM wave propagation in non-conducting materials                     | 320 |
|           | 15.3 EM wave propagation in conductors                                   | 324 |
|           | 15.4 Boundary conditions at an interface                                 | 327 |
|           | 15.5 Reflection and transmission at normal incidence                     | 330 |
|           | 15.6 Example: reflection and transmission from a thin metal sheet        | 332 |
|           | 15.7 Reflection and transmission at non-normal incidence on an interface | 334 |
|           | Chapter 15 problems  | 340 |
| <b>16</b> | <b>Electromagnetic materials</b>   | 342 |
|           | 16.1 The Drude frequency-dependent conductivity                          | 343 |
|           | 16.2 Optical phonons: infrared optical properties of ionic crystals      | 348 |
|           | 16.3 Optical absorption of an atomic resonance in a gas                  | 351 |
|           | 16.4 Microwave magnetic resonance  | 354 |
|           | Chapter 16 problems  | 358 |
| <b>17</b> | <b>Fluids</b>  | 360 |
|           | 17.1 The continuity equation   | 361 |
|           | 17.2 The Euler equation  | 363 |
|           | 17.3 Fluids at rest  | 364 |
|           | 17.4 Fluids in motion  | 372 |
|           | Chapter 17 problems  | 381 |
|           | <i>Bibliography</i>  | 382 |
|           | <i>Index</i>   | 383 |
