

## INDEX

- anisotropic plasticity, 51–68  
   Hill's 1949 criterion, 76  
   Hill's 1979 criteria, 79  
   non-quadratic criteria, 53  
   special cases, 72  
 axisymmetric flow, 84
- Barlat, 79
- basic assumptions about yielding, 31
- Bauschinger, 235
- Bauschinger effect, 232
- bcc wires, 139
- Bishop and Hill Analysis, 122  
   fiber textures, 129  
   inclusion of work hardening, 135  
   sheet textures, 129  
   yield locus calculations, 130
- Boas, 115
- Bridgman, 263
- Bridgman correction, 249
- bulge testing, 259
- Coble creep, 198
- Coloumb-Mohr criterion, 230
- compression testing, 253
- constant stress interface, 59
- continuum theory, 2
- convexity, 35
- creep, 194–203  
   activation energy, 202  
   climb, 198  
   diffusional creep, 196  
   cross slip, 111  
   crystal mechanics, 2
- defect analysis, 205–222  
   combined strain rate and strain  
     hardening, 209  
   strain localization, 205  
   strain-rate effects, 206
- deformation mechanism maps, 200
- deviation from overall shape change,  
 137
- dislocations, 94–115  
   Burgers vectors, 96  
   climb, 199  
   cross slip, 111  
   dislocation intersections, 113  
   dislocation pile-ups, 111  
   energy of, 98  
   forces on, 103  
   Frank-Read sources, 108  
   nature, 94  
   partial dislocations, 105  
   reactions between, 101  
   stacking faults, 106  
   stress fields, 101  
   reactions between, 101
- Dorn, 203
- Drucker, 46
- Duncan, 263
- effects of strain hardening and strain rate  
   on localization, 209
- effect of strain rate on localization,  
 206
- effective strain, 36
- effective stress, 36
- elastic limit, 6

- elastic-plastic transition, 9
- equivalent stress states for isotropy, 29
- flow rules, 33
- forming limit calculations, 216
- forming limit diagrams, 214
- Frank-Read sources, 108, 116
- free surfaces, 144
- high exponent criterion, 25, 74
- Hill, 81
- Hill 1948 criterion, 68
- Hill 1979 criterion, 76
- hodographs, 55
- Hollomon, 203
- hydraulic bulge test, 255
- idealized yielding behavior, 8
- independent slip systems, 120
- isotropic hardening, 187
- isotropic yield criteria, 20–42
  - experiments, 25
  - other, 25
  - Tresca, 22
  - von Mises, 23
- invariants, 15
- Johnson, 57
- Keeler, 223
- kinematic hardening, 188
- lattice shear in twinning, 161
- Leslie, 234
- limiting strains, 212
- localization, 205
- localized necking, 210
- Lode variables, 36
- lower bounds, 44, 237–247
- lower-bound yield loci, 237–247
- Lüders bands, 6
- Maciniak, 223
- martensitic transformations, 174
- microstructure of bcc wires, 139
- minimum work theorem, 45
- Mohr, 41
- Nabarro-Herring creep, 198
- necking, 185, 210
- non-quadratic criteria, 25
- normality, 34
- offset yield strength, 6
- orientation-dependence of axisymmetric flow, 122, 137, 147–158
- orientation triangle, 88
- Orowan, 235
- pencil glide, 84, 147–158
- pi plane, 30
- plane-strain compression, 257, 60
- plane-strain tension, 258
- polymers, 225
- power-law hardening, 183
- pressure-dependent yielding, 225
- principle of maximum virtual work, 44
- proportional limit, 6
- pseudo twinning, 173
- rate-sensitive model, 137
- relaxed constraints, 140
- R-value, 251
- Sachs, 247
- saturation hardening, 183
- Schmid, 115
- second phases, 143
- S-D effect, 225
- shape memory, 175
- sheet anisotropy, 251
- slip, 83–91
  - Schmid's law, 84
  - slip in bcc, 90
  - slip in hcp, 90
  - slip systems, 83
  - strains produced by, 86
  - tensile deformation, 87
- slip-line fields, 47–66
  - boundary conditions, 51
  - constant stress interfaces, 59
  - experimental evidence, 62
  - governing equations, 49
  - hodographs, 55
  - indentation of thick slabs, 56
  - plane-strain indentation, 53

- stacking faults, 106
- small strains, 16
- strain hardening, 140, 182
- strain localization, 205
- strain tensor, 18
- strain transformation, 18
- strain-rate sensitivity, 188
- strength differential effect, 225
- stereographic representation of slip systems, 88, 91, 148
- stress, 11
- stress tensor, 12
- stress transformation, 12, 85
- superelasticity, 192
- superplasticity, 118
  
- Taylor, 144
- Taylor's model, 118
- temperature dependence of creep, 202
- temperature sensitivity, 202
- tension testing, 249
- theoretical strength, 90
- torsion, 260
  
- transformation of axes, 12
- Tresca, 41
- Tresca criterion, 22
- Tresca effective strain, 40
- twinning, 160–174
  - in bcc metals, 164
  - in fcc metals, 163
  - in hcp metals, 169
  
- upper bounds, 43
  
- virtual work, 44
- volume change, 163
- von Mises, 42
- von Mises criterion, 23
- von Mises effective strain derivation, 39
  
- work principles, 43
- work hardening, 182
  
- yield criteria, 20
- yield locus convexity, 35
- yielding, 6, 253
- yield points, 7
