

Contents for Volume 2

	<i>Contents for Volume 1</i>	<i>page xi</i>
	<i>Preface</i>	xvii
5	Non-commutative JBW^*-algebras, JB^*-triples revisited, and a unit-free Vidav–Palmer type non-associative theorem	1
5.1	Non-commutative JBW^* -algebras	2
5.1.1	The results	3
5.1.2	Historical notes and comments	18
5.2	Preliminaries on analytic mappings	19
5.2.1	Polynomials and higher derivatives	20
5.2.2	Analytic mappings on Banach spaces	32
5.2.3	Holomorphic mappings	43
5.2.4	Historical notes and comments	53
5.3	Holomorphic automorphisms of a bounded domain	53
5.3.1	The topology of the local uniform convergence	53
5.3.2	Holomorphic automorphisms of a bounded domain	61
5.3.3	The Carathéodory distance on a bounded domain	77
5.3.4	Historical notes and comments	87
5.4	Complete holomorphic vector fields	88
5.4.1	Locally Lipschitz vector fields	88
5.4.2	Holomorphic vector fields	99
5.4.3	Complete holomorphic vector fields and one-parameter groups	126
5.4.4	Historical notes and comments	135
5.5	Banach Lie structures for $\text{aut}(\Omega)$ and $\text{Aut}(\Omega)$	137
5.5.1	The real Banach Lie algebra $\text{aut}(\Omega)$	137
5.5.2	The real Banach Lie group $\text{Aut}(\Omega)$	151
5.5.3	Historical notes and comments	174
5.6	Kaup’s holomorphic characterization of JB^* -triples	174
5.6.1	Bounded circular domains	175

	5.6.2	The symmetric part of a complex Banach space	187
	5.6.3	Numerical ranges revisited	193
	5.6.4	Concluding the proof of Kaup's theorem	197
	5.6.5	Historical notes and comments	207
5.7		JBW^* -triples	211
	5.7.1	The bidual of a JB^* -triple	211
	5.7.2	The main results	224
	5.7.3	Historical notes and comments	236
5.8		Operators into the predual of a JBW^* -triple	245
	5.8.1	On Pełczyński's property (V^*)	245
	5.8.2	L -embedded spaces have property (V^*)	253
	5.8.3	Applications to JB^* -triples	263
	5.8.4	Historical notes and comments	266
5.9		A holomorphic characterization of non-commutative JB^* -algebras	268
	5.9.1	Complete normed algebras whose biduals are non-commutative JB^* -algebras	268
	5.9.2	The main result	271
	5.9.3	Historical notes and comments	272
5.10		Complements on non-commutative JB^* -algebras and JB^* -triples	274
	5.10.1	Selected topics in the theory of non-commutative JBW^* -algebras	275
	5.10.2	The strong* topology of a JBW^* -triple	298
	5.10.3	Isometries of non-commutative JB^* -algebras	315
	5.10.4	Historical notes and comments	329
6		Representation theory for non-commutative JB^*-algebras and alternative C^*-algebras	347
6.1		The main results	347
	6.1.1	Factor representations of non-commutative JB^* -algebras	348
	6.1.2	Associativity and commutativity of non-commutative JB^* -algebras	352
	6.1.3	JBW^* -factors	359
	6.1.4	Classifying prime JB^* -algebras: a Zel'manovian approach	363
	6.1.5	Prime non-commutative JB^* -algebras are centrally closed	367
	6.1.6	Non-commutative JBW^* -factors and alternative W^* -factors	374
	6.1.7	Historical notes and comments	398
6.2		Applications of the representation theory	411
	6.2.1	Alternative C^* - and W^* -algebras	412

Contents for Volume 2

ix

6.2.2	The strong topology of a non-commutative JBW^* -algebra	416
6.2.3	Prime non-commutative JB^* -algebras	418
6.2.4	Historical notes and comments	421
6.3	A further application: commutativity of non-commutative JB^* -algebras	422
6.3.1	Le Page's theorem, and some non-associative variants	422
6.3.2	The main result	428
6.3.3	Discussion of results and methods	432
6.3.4	Historical notes and comments	436
7	Zel'manov approach	437
7.1	Classifying prime JB^* -triples	437
7.1.1	Representation theory for JB^* -triples	438
7.1.2	Building prime JB^* -triples from prime C^* -algebras	441
7.1.3	The main results	444
7.1.4	Historical notes and comments	458
7.2	A survey on the analytic treatment of Zel'manov's prime theorems	461
7.2.1	Complete normed J-primitive Jordan algebras	462
7.2.2	Strong-versus-light normed versions of the Zel'manov prime theorem	467
7.2.3	The norm extension problem	470
8	Selected topics in the theory of non-associative normed algebras	477
8.1	H^* -algebras	477
8.1.1	Preliminaries, and a theorem on power-associative H^* -algebras	480
8.1.2	Structure theory	484
8.1.3	Topologically simple H^* -algebras are 'very' prime	489
8.1.4	Automatic continuity	495
8.1.5	Isomorphisms and derivations of H^* -algebras	502
8.1.6	Jordan axioms for associative H^* -algebras	508
8.1.7	Real versus complex H^* -algebras	510
8.1.8	Trace-class elements in H^* -algebras	523
8.1.9	Historical notes and comments	545
8.2	Extending the theory of H^* -algebras: generalized annihilator normed algebras	561
8.2.1	The main result	562
8.2.2	Generalized annihilator algebras are multiplicatively semiprime	571
8.2.3	Generalized complemented normed algebras	577
8.2.4	Historical notes and comments	583

8.3	Continuing the theory of non-associative normed algebras	586
8.3.1	Continuity of homomorphisms into normed algebras without topological divisors of zero	586
8.3.2	Complete normed Jordan algebras with finite J-spectrum	589
8.3.3	Historical notes and comments	595
8.3.4	Normed Jordan algebras after Aupetit's paper [40]: a survey	597
8.4	The joint spectral radius of a bounded set	603
8.4.1	Basic notions and results	605
8.4.2	Topologically nilpotent normed algebras	620
8.4.3	Involving nearly absolute-valued algebras	638
8.4.4	Involving tensor products	642
8.4.5	Historical notes and comments	650
	Bibliography of Volume 1 (updated)	664
	<i>References – Papers</i>	664
	<i>References – Books</i>	691
	Additional Bibliography to Volume 2	699
	<i>References – Papers</i>	699
	<i>References – Books</i>	712
	<i>Symbol index for Volume 1</i>	715
	<i>Subject index for Volume 1</i>	719
	<i>Symbol index for Volume 2</i>	725
	<i>Subject index for Volume 2</i>	727
