<i>Foreword</i>	<i>page</i> ix
<i>Translator's note</i>	x
<i>Introduction</i>	xii
1 The chain of spin-1/2 atoms	1
1.1 Model for a one-dimensional metal	1
1.2 Bethe's method	3
1.3 Parameters and quantum numbers	8
1.4 Asymptotic positioning of complex momenta	15
1.5 State classification and counting	19
2 Thermodynamic limit of the Heisenberg–Ising chain	27
2.1 Results for the ground state and elementary excitations	27
2.2 Calculation method for the elementary excitations	30
2.3 Thermodynamics at nonzero temperature: Energy and entropy functionals ($\Delta \geq 1$)	33
2.4 Thermodynamics at nonzero temperature: Thermodynamic functions	37
Appendix A	42
3 Thermodynamics of the spin-1/2 chain: Limiting cases	44
3.1 The Ising limit	44
3.2 The $T = \pm 0$ limits	46
3.3 $T = \infty$ limit	52
4 δ-Interacting bosons	54
4.1 The elementary symmetric wavefunctions	54
4.2 Normalization of states in the continuum	56
4.3 Periodic boundary conditions	63
4.4 Thermodynamic limit	67
Appendix B	70
	v

vi	<i>Contents</i>	
	Appendix C	75
	Appendix D	77
5	Bethe wavefunctions associated with a reflection group	79
5.1	Bosonic gas on a finite interval	79
5.2	The generalized kaleidoscope	83
5.3	The open chain	89
	Appendix E	91
6	Continuum limit of the spin chain	94
6.1	δ -Interacting bosons and the Heisenberg–Ising chain	94
6.2	Luttinger and Thirring models	99
6.3	Massive Thirring model	105
6.4	Diagonalization of $H_{\mathcal{J}}$	107
7	The six-vertex model	112
7.1	The ice model	112
7.2	The transfer matrix	114
7.3	Diagonalization	119
7.4	The free energy	124
	Appendix F	137
	Appendix G	140
8	The eight-vertex model	142
8.1	Definition and equivalences	142
8.2	The transfer matrix and the symmetries of the self-dual model	146
8.3	Relation of the XYZ Hamiltonian to the transfer matrix	150
8.4	One-parameter family of commuting transfer matrices	153
8.5	A representation of the symmetric group π_N	158
8.6	Diagonalization of the transfer matrix	162
8.7	The coupled equations for the spectrum	167
	Appendix H	173
	Appendix I	175
9	The eight-vertex model: Eigenvectors and thermodynamics	179
9.1	Reduction to an Ising-type model	179
9.2	Equivalence to a six-vertex model	185
9.3	The thermodynamic limit	194
9.4	Various results on the critical exponents	199
10	Identical particles with δ-interactions	203
10.1	The Bethe hypothesis	203
10.2	Yang’s representation	207

<i>Contents</i>		vii
10.3	Ternary relations algebra and integrability	211
10.4	On the models of Hubbard and Lai	220
11	Identical particles with δ-interactions: General solution for two internal states	223
11.1	The spin-1/2 fermion problem	223
11.2	The operatorial method	231
11.3	Sketch of the original solution of the fermion problem	233
11.4	On the thermodynamic limit of the fermion system in the vicinity of its ground state	236
	Appendix J	244
	Appendix K	249
	Appendix L	250
12	Identical particles with δ-interactions: General solution for n components and limiting cases	253
12.1	The transfer matrix $Z(k)$ in a symmetry-adapted basis	253
12.2	Recursive diagonalization of matrix Z	257
12.3	Zero coupling limit	264
13	Various corollaries and extensions	268
13.1	A class of completely integrable spin Hamiltonians	268
13.2	Other examples of integrable systems	275
13.3	Ternary relation and star–triangle relation	279
13.4	Ternary relation with \mathbb{Z}_5 symmetry	282
13.5	Ternary relations with \mathbb{Z}_2^g symmetry	287
13.6	Notes on a system of distinguishable particles	292
	Appendix M	294
	Appendix N	298
14	On the Toda chain	301
14.1	Definition	301
14.2	Bäcklund transformation	301
14.3	The solitary wave	303
14.4	Complete integrability	304
14.5	The M -soliton solution for the infinite chain	307
14.6	The quantum chain	308
14.7	The integral equation for the eigenfunctions	310
14.8	Ternary relations and action–angle variables	311
