Introduction: civil justice in 2013

Thou shalt not ration justice.¹

The Woolf Report represented a strong administrative initiative to provide for a rationed and rational system of judicial resolution of disputes.²

This book examines reforms to the English and Welsh civil justice system carried out following Lord Woolf's Access to Justice Review (1994–96) (the Woolf Reforms)³ and Sir Rupert Jackson's Costs Review (2009) (the Jackson Reforms).⁴ It specifically examines the way in which they have both attempted to reduce litigation cost and delay so that the courts are better able to carry out their constitutional function of vindicating and enforcing rights and thereby securing the rule of law.⁵ It does so because both reforms adopted a novel approach to their task; one that had not been attempted since reforms carried out in the 1870s. Historically, the civil justice system has been committed to, and reformed

consistently with, a specific legal philosophy or theory of justice.⁶ That philosophy is one that has embodied a single substantive policy aim, which has variously been referred to as the achievement of justice in the individual case; substantial or real justice; complete justice; a correct decision; rectitude of decision; justice on the merits;⁷ or substantive justice.⁸ Choice of terminology has changed over time. During the nineteenth century, the two common means of capturing the idea were to refer to the court's role as being to arrive at a decision on the merits or to do complete justice. The twentieth century preferred to refer to courts doing substantive justice or justice on the merits. Despite these terminological differences, the idea they expressed was the same: justice was achieved when an individual claim or dispute concluded with a court judgment that was 'substantively accurate'.⁹ A substantively accurate decision was one arrived at through the correct application of true fact to right law, such that when properly acted on it vindicated or enforced legal or equitable rights or obligations. In this book, the term substantive justice is used to express this theory of justice, except where the historical context requires a contemporary term to be used.

The revolutionary change that the Woolf and Jackson Reforms brought about was to reject this traditional theory of justice.¹⁰ Rather than maintain a commitment to that historic approach, rights were to be vindicated through the application of a new theory of justice, similar to one developed by Bentham in the nineteenth century, as well as to one developed by Zuckerman over the last twenty years.¹¹ This new theory is committed to what has been described as proportionate

INTRODUCTION

3

justice.¹² Within it, substantive justice is no longer the substantive policy aim. It is one aim amongst others, those being the pursuit of economy, efficiency, expedition, equality and proportionality. Each of these policy aims is intended to support the achievement of a wider public policy aim: the need to ensure that the limited resource allocation by the State to the justice system could be distributed fairly amongst all those who need to call on the State to vindicate and secure the effective enforcement of their rights.¹³ Rather than focus on securing individualised justice as the historical approach had, the new theory focused on securing a form of distributive justice.¹⁴ The ultimate consequence of this is that, in contrast to the position that prevailed prior to 1999 when the Woolf Reforms took effect, individuals who seek rights-vindication do so through a 'a rationed and rational system of judicial resolution of disputes'.¹⁵ A limit is now placed on the amount of resources individuals and the State can properly expend on securing substantive justice in any particular case. The limit operates in two ways. In some cases it requires the court to refuse to allow a claim to proceed to judgment. It thus denies substantive justice in its entirety. In other cases – the majority – it restricts the amount of time and money that is spent on litigation. As such, it reduces the court's ability to achieve substantive justice. By limiting, for instance, the nature and extent of evidence placed before the court, the quality of decision-making is necessarily reduced. In both cases, rather than to secure substantive justice, the system is only able to secure proportionate justice.

¹² A. Clarke, *The Future of the CPR* (District Judges' Annual Conference, Warwick, 25 June 2009) at [15], 'The CPR simply provide a formal means by which the court as part of its case management role can encourage and facilitate proper settlement. Secondly, by encouraging the greater use of ADR court resources are released to other cases. It increases access to justice for those whose cases cannot settle through assisting those who wish to settle to do so. In this it is entirely consistent with the aim of achieving proportionate justice for all.' Available at <<http://www.judiciary.gov.uk/Resources/JCO/Documents/Speeches/mr-dcj-conference-25062009.pdf>>; Sorabji, 'The Road to New Street Station' at 89.

¹³ H. Woolf (1996) at 24, to 'preserve access to justice for all users of the system it is necessary to ensure that individual users do not use more of the system's resources than their case requires. This means that the court must consider the effect of their choice on other users of the system', as explained by D. Neuberger, 'A New Approach to Justice: From Woolf to Jackson', in G. Meggitt (ed.), *Civil Justice Reform – What has it achieved?* (Sweet & Maxwell, 2010); Sorabji, 'The Road to New Street Station' at 88; J. Dyson, *The Application of the Amendments to the Civil Procedure Rules* (18th Lecture in the Implementation Programme) (22 March 2013) at [18]: 'We have a managed system. That system must be managed for the needs of all litigants.'

This limit is necessary because it is the means by which the justice system can properly vindicate rights for the majority of citizens. Rationing does not undermine the provision of justice. It is a necessary condition for it to be effected properly by the State.

In order to explore the nature and effect of this revolutionary change, this book is divided into three substantive parts. Part I explores historical and theoretical issues. Chapter 1 examines the nature and purpose of the civil justice system, the manner in which reform has been attempted in the past and the Woolf and Jackson Reforms' revolutionary nature. Chapter 2 looks at a previous, and eventually successful set of revolutionary reforms, those that took place in the nineteenth century. It does so in order to tease out three important points: that the theory of justice that governed the system's operation from the 1870s was itself the contingent product of revolutionary reform; that it took over fifty years for reform to succeed; and that the theory the reforms implemented sowed the seeds for the problem the Woolf Reforms identified as lying at the heart of excess litigation cost and delay: the subversion of the rules of court from their aim of achieving substantive justice. Chapter 3 is concerned with an examination of Bentham's theory of justice, which is an applied aspect of his broader utilitarian philosophy. This theory was never put into practice. It is examined because the theory the Woolf and Jackson Reforms introduced in many ways is a variation of it. Part II explores the revolutionary nature of the Woolf and Jackson Reforms. It examines how they go beyond the traditional nineteenth-century theory of justice discussed in Chapter 2 and how it adopts the same structure as Bentham's theory. It does so by discussing the centrepiece of the new theory of justice, the introduction of an overarching purposive provision – an explicit overriding objective – into the rules of court. Chapter 4 examines how this provision has been misinterpreted as no more than an expression of the traditional theory of justice. Chapters 5 and 6 provide an exegesis of its proper interpretation. The final part of the book turns to the question of implementation. It is one thing to articulate a new theory of justice; it is another to ensure that it is put into effect. In the nineteenth century it took over fifty years to effect a reform of a similar kind to that which the Woolf Reforms have attempted. Successful implementation takes considerable time and effort. It requires the courts to explain the nature of the new theory, to do so consistently, and to give practical guidance in respect of how it is to operate in practice. If they do not, change does not take place. Following the Woolf Reforms implementation in 1999, the courts failed to take this approach.

INTRODUCTION

5

If the new theory is to be implemented properly following the introduction of the Jackson Reforms in 2013, the nineteenth-century approach to implementation will need to be adopted. If not, the rationed system of justice the new theory was, and is, intended to introduce will not operate effectively, and the problems that the Woolf Reforms identified, and the Jackson Reforms also sought to remedy, will remain unabated.

Before turning to these issues, two caveats need to be made. This book concentrates on justice in the English and Welsh High Court and Court of Appeal. Justice in the County Courts is not considered. This is for no reason other than that the exposition of the nineteenth-century theory of justice took place within the pre-1873 superior courts of record and then post-1873 through the operation of the Rules of the Supreme Court. It is not suggested that justice in the County Courts was not carried out consistently with the traditional theory of justice. It undoubtedly was. The second caveat concerns the specific procedural reforms recommended by, and then introduced as a consequence of the Woolf and Jackson Reforms. These reforms, such as the reform of discovery, the introduction of case and then costs management and docketing, are considered only in so far as they relate to the operation of the new theory of justice. The book does not provide a detailed critique of individual procedural reforms. It focuses instead on the theory that informed those reforms and how they are to be applied in practice. The Woolf and Jackson Reforms' ultimate success will hinge on the courts' ability to apply case and costs management effectively. That in turn will only be possible if the courts, lawyers and litigants properly understand the purpose for which such management is to be carried out. It is one thing to introduce a managed, a rationed system of justice. The real question is how it is to be managed, how justice is to be rationed and to what purpose. As such, it is 'necessary to start by identifying the enterprise that litigation management involves and what it aims to achieve'.¹⁶ By examining the new theory of justice this book seeks to identify the nature of that enterprise.

The crisis in civil justice

Every now and again some forlorn and law-wrecked suitors cry aloud about the cost, the delay, the bewildering confusion of our legal system. . . The chief grounds of complaint against the existing system are (1) its cost, (2) its delay, (3) its want of finality.¹

Civil litigation is in a state of crisis.²

1.1 Introduction

This book is about the English and Welsh civil justice system, the institutions, rules and procedures through which substantive civil rights are adjudicated, vindicated and enforced.³ It assesses its purpose and how that has changed as a consequence of the Woolf and Jackson Reforms.⁴ In order to place those reforms in context, this chapter does a number of things. It outlines the justice system's purpose; the problems of litigation complexity, cost and delay that have historically undermined its ability to achieve that purpose, and the reforms that have tried, and continually failed, to cure them; and finally, the Woolf and Jackson Reforms and the claim that they are revolutionary in nature.

1.2 The justice system's purpose

The civil justice system forms part of the judicial branch of the State. It comprises the following:

¹ T. Snow, 'The Reform of Legal Administration: An Unauthorised Programme' 8 (1892) *Law Quarterly Review* 129, 129.

² C. Glasser, 'Solving the Litigation Crisis' 1 (1994) *The Litigator* 14.

³ Hereinafter English and England.

- the County Courts,⁵ High Court, Court of Appeal (Civil Division) and the Supreme Court of the United Kingdom;
- the judges appointed to serve in them;
- the procedural or adjective law operative therein;
- civil legal aid, where available;⁶ and
- effective enforcement mechanisms.

The civil justice system exists in order to enable individuals, businesses, and local and central government to vindicate and, where necessary, enforce their civil legal rights and obligations, whether those rights are private or public.⁷ It exists to ensure that the mere assertions of the civil law are ‘translated into binding determinations’.⁸ Equally, it provides the basis for individuals to resolve disputes concerning their civil legal rights and obligations consensually through any of various informal and formal means of alternative dispute resolution procedure, as well as the means to enforce consensual resolution.⁹ In this way, the system provides a secure framework through which social and economic activity takes place, property rights, civil rights and liberties are secured and government is rendered subject to the due process of law. In delivering justice in this manner, the civil justice system provides a public good by giving life to the rule of law.¹⁰ It does so notwithstanding the fact that the vast majority of civil disputes are settled consensually.¹¹ It may be true that very few disputes are resolved following litigants having their day in court, but the existence of a readily accessible and effective civil
