

Index

- AAA, 225
- acetylation, 200
- action potentials, 171
- active transport**, 176
- actomyosin, 76, 214
- ADF/cofilin, 209
- adhesome, 248
- age, 397
- aging process, 374
- amoeboid movements, 269
- amphiregulin, 407
- analog, 40
- anaphase**, 80
- angiogenesis, 414
- anoikis, 405
- anterior–posterior, 391
- antiporter, 174
- ARP2/3, 208
- astral microtubules, 212
- autophagy, 333
- avidity, 86
- axonal hillock, 160
- axonal transport, 235
- axonemes, 236
- axoplasm, 234
- BAR domain proteins, 247
- barbed end, 195
- basement membrane, 253
- bending, 387
- benign growth, 403
- beta-catenin, 257
- Bilayer Couple Hypothesis, 131
- biochemical linkages, 382
- bioinformatics, 374
- biomechanical, 399
- blastula, 387
- blebbing, 269
- blebbistatin, 276
- Boltzmann, 138
- Brefeldin A, 156
- Brownian, 96
- cadherins, 257
- cancer, 402
- catch bond, 228
- causative mutation, 403
- cell autonomous, 384
- cell behavior, 373
- cell cycle, 5, 57
- cell state, 14
- cell–cell junction tensions, 393
- centrosome, 200
- channels, 170
- chaperone, 30, 331
- check points, 5
- checkpoint, 56, 388
- chemotaxis, 10
- chromophore-assisted laser inactivation, 106
- cilia, 201
- circumferential arcs, 273
- clathrin-dependent endocytosis, 50
- cleavage furrow, 4
- clustering, 247
- coatamers, 156
- cohesion of the cytoplasm, 267
- collective cell migration, 268
- compartmentalization, 3
- compartments, 16
- compensatory cellular hypertrophy, 185
- complex functions, 3
- compressive pressures, 407
- condensin, 297
- conformational changes, 198
- contractile unit, 88
- contractility, 78
- contraction, 387
- coordinated functions, 81
- critical function, 83
- cyclic, 28
- cyclic processes, 371
- cytokinesis, 212
- cytoplasmic dynein, 225

- Darwinian selection, 7
- Debye length, 138
- Debye–Huckel, 140
- decellularized, 244
- decision, 56
- deformation, 57
- dependent variable**, 52
- depolarization, 167
- deterministic, 36
- detyrosination, 200
- diffusion, 95
- digital, 40
- dorsal–ventral patterns, 391
- dynamic tensions, 193, 206
- ectoderm, 385
- elastin, 250
- electrochemical gradient**, 175
- emergent property, 25
- endocytosis, 38
- endoderm, 385
- endoplasmic reticulum, 30
- endosomes, 33
- endothelium, 389
- enthalpies, 87
- entropy, 87
- epithelial to mesenchymal transition, 389
- equilibrium binding, 135
- Equipartition of Energy, 204
- erlotinib, 409
- error checking, 36
- eukaryotic, 3
- eukaryotic initiation factor, 326
- exocytosis, 30, 38
- expansion, 391
- extension, 391
- extracellular matrix, 243
- extrinsic cues, 393
- facilitated diffusion, 174
- fibronectin, 246
- fibrosis, 252, 408
- filamin, 267, 406
- filopodia, 28
- filopodial extensions, 273
- fission, 161
- flagella, 201
- focal adhesions, 55
- formins, 206
- FRAP, 311
- functional modules, 14
- fusion, 161
- G0, 79
- G1, 79
- G2, 79
- gap junction, 256
- gastrulation, 389
- gated**, 177
- glutamylation, 200
- glycophosphoinositide, 129
- glycoprotein, 59
- glycosylation, 146
- Golgi, 30
- growth phase, 5
- growth states, 407
- growth suppressors, 411
- Guoy–Chapman theory, 173
- heat shock proteins, 9, 12, 310
- hepatectomy, 186
- heterochronic mice, 397
- histone methylation, 297
- homeostasis, 182
- homeostatic, 13
- hyaluronan, 250
- hyperthermia, 324
- hypertrophy, 167
- If–Then, 83
- immunotherapies, 418
- importins, 294
- induced pluripotent stem cells, 5
- initiation, 326
- integrated functions, 59
- integration, 43
- integrins, 209
- intermediate filaments, 202
- interphase, 79
- invadopodia, 208, 277
- isotropic spreading, 88
- kidney tubules, 386
- kinesin, 219
- kinetochores, 201
- lamellipodia, 28
- lamellipodial extensions, 260
- lamin A expression, 396
- laminin, 250

- laser tweezers, 227
- lever arm, 229
- linked functions, 57
- linker of nucleoskeleton and cytoskeleton, 302
- lipid asymmetry, 137
- lipidomics, 122
- local feedback controls, 267
- localization, 28
- localized, 28
- localized protein synthesis, 324
- long-lived intermediate, 369
- lysosome, 34
- M, 79
- malignancy, 403
- MBInfo, 266
- mechanical stretching, 380
- mechanosensing, 38
- mechanosensory pinching modules, 406
- membrane corrals, 132
- membrane curvature, 133
- membrane potential, 174
- membrane tension, 57
- memory T cells, 419
- mesenchymal state, 407
- mesoderm, 385
- metaphase**, 80
- MiR21, 412
- mitochondria, 31
- mitosis, 4, 29, 80
- modular, 28
- modular components, 406
- modularity, 28
- Morse equation, 184
- motility, 193
- motor systems, 193
- mRNPs, 320
- MTOC, 190, 200
- mTOR, 303
- mTORC, 314
- mucin, 415
- multipotent, 394
- myelin sheaths, 179
- myosin, 219
- myosin IIA, 406

- nuclear envelope, 301
- nuclear pore complex, 294
- nucleolus, 295
- nucleoskeleton, 301
- nucleosomes, 291
- nucleus, 29
- oligomerization, 246
- one-dimensional diffusion, 99
- optogenetic, 359
- osmolytes, 130, 167
- osmotic pressures, 183
- oxytocin, 398
- parallel processing, 5
- peroxisomes, 35
- persistence length, 204
- phagocytosis, 333
- phases, 69
- phosphorylation, 56
- photobleaching, 106
- PIP2, 136
- pluripotent, 386
- podosome, 208, 281
- pointed ends, 228
- polarity, 196
- poly A tail, 317
- polyadenylation, 306
- polymerization, 51
- polyribosome factory, 338
- pores, 170
- processive, 222
- prometaphase, 396
- prophase**, 80
- protein composition, 76
- protofilament, 195
- purse-string, 259
- rate constants, 367
- reactive oxygen species, 313
- recycling, 272
- reducing dimensionality, 95
- regional specialization, 90
- resting phases, 91
- reverse engineering, 365
- Reynolds, 95
- rigidity, 249
- rigidity sensing, 84, 249
- rigidity-sensing modules, 402
- robust, 3, 9
- RTKs, 356

- S, 79
- saltatory, 109, 234
- sarcomere-like contractile units, 355
- sarcomeric units, 260
- scarring, 387
- seed, 199
- sensory mechanism, 388
- sensory modules, 402
- seven characteristics of malignancies, 403
- Signal Recognition Particle, 338
- simplest linkages, 379
- Single Particle Tracking, 105
- snail, 387
