

Collecting Qualitative Data

This book provides a practical and accessible guide to collecting qualitative data that moves beyond the traditional focus on face-to-face interviews. It emphasises a range of textual, media and virtual methods that provide interesting twists on, and are less resource-intensive than, established methods, thereby offering the researcher alternative techniques for collecting data. Divided into three parts, textual, media and virtual, the book provides step-wise guidance on methods that are underutilised within qualitative research and offers new and interesting angles on widely used techniques. Contributors share their experiences of implementing each particular technique and highlight both its potentials and pitfalls. What unites all the methods featured in this book is that they are ideally suited to student projects and resource-limited research. The book will be of interest to readers both new to qualitative research and established researchers seeking to broaden their methodological repertoire.

Virginia Braun is Professor in the School of Psychology at The University of Auckland, New Zealand. A feminist and critical psychologist, her research explores gender, bodies, sex/sexuality and health, and she has published extensively in these areas. She is co-author of the award-winning textbook *Successful Qualitative Research: A Practical Guide for Beginners*, as well as numerous other methodological works. Notably, with Victoria Clarke, she developed an approach to thematic analysis which has become one of the most widely used qualitative methods in the social and health sciences.

Victoria Clarke is Associate Professor in Qualitative and Critical Psychology at the University of the West of England, Bristol, UK. She has published three prize-winning books, including most recently *Successful Qualitative Research: A Practical Guide for Beginners*. She has conducted Economic and Social Research Council- and British Academy-funded research on family and relationships and has published on topics including appearance psychology, human sexuality, LGBTQ psychology and qualitative methods. With Virginia Braun, she developed an approach to thematic analysis which has become one of the most widely used qualitative methods in the social and health sciences.

Debra Gray is Reader in Social Psychology at the University of Winchester, UK. She is a critical social psychologist whose work explores the intersecting areas of social, political and environmental psychology. She has published widely on many topics relating to participation in political, community and

health settings and collective socio-spatial identities and intergroup relations. She has an ongoing interest in the intersection of research and practice, and works with many third-sector and public-sector organisations. She has expertise in a wide range of qualitative methods, and she is excited by creative (and multi-modal) ways to collect, analyse and use qualitative data.

Acknowledgements

This book, *Collecting Qualitative Data (CQD)*, developed out of a seminar – Qualitative Research in an Age of Austerity – which took place at the University of the West of England in October 2012. We are very grateful to the Qualitative Methods in Psychology Section of the British Psychological Society for the seminar competition award that enabled the event to take place, and to our seminar co-organisers, Nikki Hayfield and Naomi Moller. And we were delighted that Cambridge University Press *got* our vision for the book and came on board.

The five-year interval between that seminar and the publication of this book means it will come as no surprise that we have to thank our contributors for bearing with us when health problems and work overload got in the way of us being the efficient and ‘on it like a scotch bonnet’ (thanks Nikki!) editors we ideally aspire to be. With this in mind, we particularly thank Tim Kurz, who joined us for the early stages of the adventure sailed by the good ship *CQD*. Sadly, work also got in the way of his involvement, and he jumped overboard and swam back to safe harbour. His early involvement is much appreciated!

We were thrilled that two titans of the world of qualitative research – Professor Brendan Gough and Professor Ruthellen Josselson – agreed to provide wise words that set us off on (BG), and welcomed us back from (RJ), the *CQD* adventure. Thanks to our students, especially our supervisees (past and current), for being enthusiastic co-adventurers in messing around with qualitative methods. And it goes without saying (but we’re saying it) that we extend a very warm ‘huzzah!’ to all the people who have mentored, inspired and collaborated with us over the years.

Debra wants to say a special thank you to her chapter co-authors – Helen and Bronwen – for their help in navigating the wilds of vignette research; to her PhD supervisor – Kevin Durrheim – for introducing her to qualitative methods in the first place, and for encouraging her to ask critical questions and find critical answers. And Ginny and Victoria want to say a special thank you to

Celia Kitzinger and Sue Wilkinson, their PhD supervisors at Loughborough University, for fanning the flames of their love of qualitative research, encouraging them, and giving them the confidence, to become adventurers, to ‘experiment’ (in the broadest sense), with qualitative methods. Their chapters in this book are heavily indebted to Sue and Celia’s groundbreaking work.

Contributors

Martha Augoustinos is Professor of Psychology at the University of Adelaide, Australia. Martha has published widely in the field of social psychology and discourse, in particular on the nature of racial discourse in Australia. This has included an analysis of how Indigenous Australians are constructed in everyday conversation and political rhetoric. She is co-author of *Social Cognition* with Iain Walker and Ngaire Donaghue and co-editor with Kate Reynolds of *Understanding Prejudice, Racism and Social Conflict*.

Laura Favaro is a doctoral student at City University London, UK. Her thesis examines constructions of gender, sex, sexuality and intimate relationships in UK- and Spain-based commercial women's online magazines, integrating analyses of the editorial content, user forum discussions and interviews with producers. Laura convenes the Gender & Sexualities Research Forum at City.

Fiona Fox is a researcher with the Ethnography team at the National Institute for Health Research Collaborations for Leadership in Applied Health Research and Care West (NIHR CLAHRC West), UK. Prior to that, she studied and worked at the three universities in Bristol and Bath, gaining a BSc from the University of Bristol; a PhD from the Centre for Appearance Research at the University of the West of England; and a great deal of postdoc experience from the Department for Health, at the University of Bath. Fiona has used qualitative approaches for a variety of applied health research topics, as well as supervising, reviewing and teaching qualitative research methods.

Lucy Gibson is Lecturer in Applied Health and Social Care at Edge Hill University, UK. Her doctoral research explored popular music and the life course and investigated themes of cultural commitment, lifestyles and identities amongst fans of northern and rare soul, rock, and electronic dance music (EDM). Lucy has published and presented academic work on popular music

and ageing, the extension of youth cultural practices in adulthood, using email interviews to investigate music and memory, and the ageing body. Her research interests broadly focus on ageing, youth culture, community engagement, well-being and online research methods.

David Giles is Reader in Media Psychology at the University of Winchester, UK. He has published several books on the influence of media and celebrity and numerous papers on the social dynamics of online communication, with particular reference to mental health. He is one of the founders of the multidisciplinary MOOD (Microanalysis of Online Data) network, which organises an annual international workshop on the development of methods for performing close qualitative analyses of a broad range of online materials incorporating text, visual content, hyperlinks and other uniquely digital phenomena.

Rosalind Gill is Professor of Social and Cultural Analysis at City University London, UK. She is interested in gender, media, and intimate life, as well as in new technologies and cultural and creative labour. She is author or co-editor of several books including *Gender and the Media*, *Secrecy and Silence in the Research Process* with Roisin Ryan Flood and *New Femininities* with Christina Scharff.

Brendan Gough is Professor of Social Psychology in the School of Social, Psychological and Communication Sciences at Leeds Beckett University, UK. Brendan has published numerous papers on gender identities and relations, mostly on health and well-being (weight, alcohol consumption, smoking, diet and aspects of men's health). He is co-founder and co-editor of the journal *Qualitative Research in Psychology*, and he edits the Critical Psychology section of the journal *Social & Personality Psychology Compass*. He has also co-authored *Critical Social Psychology* and co-edited *Men, Masculinities and Health* and *Reflexivity*.

Paul Hanna is a Chartered Psychologist and Lecturer in Sustainable Tourism at the University of Surrey, UK. His main research interests are identity, well-being, sustainability, pro-environmental behaviours and research methodologies. His work has been published in a range of journals, including *GeoJournal*, *Journal of Consumer Culture*, *Theory & Psychology*, *Qualitative Research*, *Qualitative Research in Psychology* and *Environmental Economics*. He is currently working on a range of research projects exploring spatial, affective, social and individual elements of sustainable behaviour in relation to leisure and tourism.

Scott Hanson-Easey is Research Fellow in the School of Population Health at the University of Adelaide, Australia. He has a formal background in social psychology, and his research, employing discourse analysis and social representations theory, has addressed social issues such as intergroup relations, the language of racism and intercultural risk communication. Recently, his work has focused on the social construction of climate change risk and adaptation.

Laura Harvey is Lecturer in Sociology at the University of Surrey, UK. Her work takes an interdisciplinary approach, drawing on sociology, gender studies, social psychology and cultural studies. Her research interests include everyday intimacies and inequalities, research with young people, sexualities, the mediation of sexual knowledge, feminist methodologies and discourse analysis.

Nikki Hayfield is Senior Lecturer in Social Psychology in the Department of Health and Social Sciences at the University of the West of England, Bristol, UK. Her PhD was an exploration of bisexual women's visual identities and bisexual marginalisation. In her research, she uses qualitative methodologies to explore lesbian, gay, bisexual and heterosexual sexualities, relationships and (alternative) families.

Nicholas Hookway is currently Lecturer in Sociology within the School of Social Sciences at the University of Tasmania, Australia. Nick's principal research interest is morality and social change in conditions of late modernity. His other research interests are kindness, religion and spirituality, and online research technologies.

Ruthellen Josselson is Professor of Clinical Psychology at the Fielding Graduate University, US, and a psychotherapist in private practice. Her research focuses on women's identity and on human relationships. She received both the Henry A. Murray Award and the Theodore R. Sarbin Award from the American Psychological Association as well as a Fulbright Fellowship. She has been active in group relations work for many years, consults to organisations, and lectures and conducts workshops both nationally and internationally. She is the editor of the journal *Qualitative Psychology* and the author of numerous books including, most recently, *Interviewing for Qualitative Inquiry*.

Pamela J. Lannutti is Associate Professor of Communication and Director of the Graduate Programs in Professional and Business Communication at La Salle University, Philadelphia, US. Her research focuses on communication in

personal relationships. Much of her recent work has focused on same-sex marriage, and she is the author of *Experiencing Same-Sex Marriage*.

Helen Malson is Associate Professor of Social Psychology in the Department of Health and Social Sciences at the University of the West of England, UK. Her research focuses on critical feminist analyses of ‘eating disorders’ and, more broadly, on issues of gendered embodiment. Her methodological expertise lies in critical discourse analytic approaches in analysing a variety of different data types. Her research has been funded by the Arts Research Council, the New South Wales Department of Health and the Westmead Millennium Trust. Her publications include *The Thin Woman* and, with Maree Burns, *Critical Feminist Approaches to Eating Dis/Orders*.

Paula Meth is Senior Lecturer in the Department of Urban Studies and Planning at Sheffield University, UK. Her work encompasses Social Geography, Urban Studies and Development Studies and is focused on gender, violence and housing in South Africa. Paula is the co-author of *Geographies of Developing Areas*, and she has published various papers on issues relating to qualitative methodology, particularly in relation to the ethics of working on violence as well as the use of diaries and mixed methods in research.

Naomi Moller is a Chartered Psychologist and Lecturer in Psychology at the Open University, UK. Trained as a counselling psychologist, she has a long-standing interest in research, teaching research methods and supervising research for almost a decade, and recently co-edited with Andreas Vossler *The Counselling and Psychotherapy Research Handbook*. Her research interests include perceptions and understandings of counsellors and counselling, relationship and family research, including infidelity. Naomi is co-director of the Families, Relationships and Communities research group at the Open University, and is on the editorial board of various journals including the British Association of Counselling and Psychotherapy’s *Counselling and Psychotherapy Research*.

Shadreck Mwale is a medical sociologist and Lecturer in Sociology and Social Policy at the University of Brighton, UK. His research interests are in human involvement in clinical trials, regulation of medical innovations, inequalities and health, and research methodologies. He has recently completed his PhD and is working on a number of publications derived from his research on ethical and regulatory dimensions of healthy volunteer involvement in Phase 1 clinical trials.

Bronwen Royall graduated from the University of the West of England with a degree in psychology and is currently studying for an MSc in neuropsychology at the University of Bristol, UK. Her research interests are predominantly focused on issues in mental health following her work as an assistant psychologist.

The Story Completion Research Group includes Victoria Clarke, Nikki Hayfield, Naomi Moller and Irmgard Tischner and various postgraduate students including Iduna Shah-Beckley and Matthew Wood, both of whom have contributed to the writing of Chapter 3. Other students have given their permission for us to use their research as illustrative examples.

Gareth Terry is Senior Research Officer at the Centre for Person Centred Research at AUT University (Auckland, New Zealand). His research fits broadly in the areas of critical health and critical social psychologies, with particular interests in people’s experiences of life with chronic health conditions, men’s health, body image, reproductive decision-making, and masculine identities. He also has methodological interests in thematic analysis, critical discursive psychology and qualitative survey development, and has contributed to edited volumes in these areas.

Irmgard Tischner is Senior Lecturer at the Technical University of Munich, at the Chair of Sociology of Diversity. Focusing on poststructuralist, feminist and critical psychological approaches, her research interests include issues around embodiment and subjectivity, particularly in relation to (gendered) discourses of body size, health and physical activity in contemporary Western industrialised societies, as well as gendered issues of appearance and leadership in business and politics.

Foreword

Brendan Gough

Qualitative research is a rich, diverse field which is ever expanding and fragmenting. However, this diversity is all too often confined to specialist journals and conferences – the type of qualitative research featured in established journals is often quite formulaic, dry and dull (see Brinkmann, 2015). Students and early career researchers may be forgiven for thinking that qualitative research constitutes doing interviews and then attempting to generate some themes from the resulting transcripts. As the editors of this book and various other qualitative researchers have noted, however, interviews can be re-imagined in enriching and productive ways, whether facilitating the recruitment and engagement of otherwise hard-to-reach participants via communication technologies (messaging, Skype, etc.), or employing meaningful artefacts (e.g., photographs, treasured possessions) and activities (drawing, story completion) to help enliven and extend face-to-face interviews (e.g., Guillemin, 2004; Jowett, Peel and Shaw, 2011; Sheridan and Chamberlain, 2011).

Beyond interviews, there is a world of qualitative data to be sought, selected and/or collected, ranging from newspaper and magazine articles (and readers' responses to stories) to online sources, such as discussion forums, blogs and social media content. Moreover, the use of media and virtual data sources in qualitative research can be less time-consuming, less challenging and less ethically complex than more traditional face-to-face interviews and focus groups – and therefore appealing to novice qualitative researchers working on time-limited projects. A text like this is therefore to be welcomed, opening up a whole new repertoire of innovative methods which can engage current and future generations of qualitative researchers. As such, it builds on and extends recent calls to document, deploy and celebrate diversity in qualitative enquiry (e.g., Madill and Gough, 2008; Gough and Lyons, 2016).

Rather uniquely, this book foregrounds data collection. It is curious that most qualitative methods textbooks tend to emphasise different modes of analysis over data collection, and that, invariably, those methods of qualitative data collection that do feature are interviews and focus groups. In explicating

different (and some novel) techniques of gathering, generating and finding qualitative data, current and potential qualitative researchers are provided with clear guidelines, illustrations and reflections which will help them make informed choices for their own research endeavours. All chapter contributors are experts in the methods they present, and offer valuable ‘insider’ insights into the particular practices, potential pitfalls and pleasures involved in their own brand of qualitative research.

Given that quantitative researchers are becoming more acquainted with qualitative research methods, it is refreshing to see a whole part of the book devoted to qualitative ‘experimenting’ with conventional quantitative tools, such as surveys and vignettes. Qualitative surveys, for example, present a series of open questions in order to encourage participants to provide more detailed accounts of the topic in question than would be gathered using traditional numerical scales and tick-box questionnaires. The qualitative survey can also empower the researcher/s by delivering high sample sizes and large datasets, which many mainstream journals expect from submitting authors. The other methods covered showcase creative modes of eliciting personal accounts from participants; the use of hypothetical scenarios (story completion; vignettes) may engage participants to explore personal experiences without feeling exposed, while bespoke diary methods allow participants to develop meaningful accounts and reflections over time.

It is also pleasing to see a part on media materials – resources too often left to the margins of qualitative research or to interdisciplinary fields such as media studies, where theoretical preferences can often override methodological rigour. Because we live in a world which is media-saturated, it would be strange if qualitative researchers did not attend to media content. A focus on print and broadcast media can tell us much about contemporary (and competing) norms, and it is great to see coverage of newspapers and magazines (representations) as well as radio material (social interaction) in Part II. The availability of media content online makes such data easily accessible for qualitative researchers, with the opportunities for feedback online for readers, viewers and listeners offering further data seams for qualitative researchers to mine. The production of accounts online, whether through blogs or discussion forums, allows access to often personal stories which might be difficult to generate using face-to-face interviews, and it is good to see chapters which draw on these online sources.

The online environment is the focus of the final part, with the emphasis on ways in which the researcher can interact with participants using available digital technologies. Various modes of communication are promoted: interviewing via email, messaging and Skype, as well as online focus groups. As such, the classic qualitative methods of individual and group interviews

are reworked, enabling remote dialogue with participants while also presenting some challenges. Again, the advice and examples presented will be welcomed by qualitative researchers interested in using diverse digital means of encountering participants.

In sum, this book breaks new ground by bringing together a collection of authors and methods which illuminate new and exciting ways of doing qualitative research. I expect it will be very popular and will prove to be an invaluable resource for novice and experienced researchers alike. I for one will be using it for teaching and research purposes, and will be encouraging my colleagues to do likewise.
