| Preface  | <i>Page</i> | <b>xv</b> |
|--|-------------|-----------|
| Notation Used . . . . .  | xviii       |           |
| List of Abbreviations . . . . .  | xix         |           |
| <b>1 Introduction</b>  | <b>1</b>    |           |
| 1.1 Statistics and Machine Learning [A]⊗ . . . . .                     | 1           |           |
| 1.2 Environmental Data Science [A]⊗ . . . . .                          | 6           |           |
| 1.3 A Simple Example of Curve Fitting [A]⊗ . . . . .                   | 9           |           |
| 1.4 Main Types of Data Problems [A]⊗ . . . . .                         | 12          |           |
| 1.4.1 Supervised Learning [A]⊗ . . . . .                               | 15          |           |
| 1.4.2 Unsupervised Learning [A]⊗ . . . . .                             | 16          |           |
| 1.4.3 Reinforced Learning [A]⊗ . . . . .                               | 17          |           |
| 1.5 Curse of Dimensionality [A]⊗ . . . . .                             | 17          |           |
| <b>2 Basics</b>  | <b>19</b>   |           |
| 2.1 Data Types [A]⊗ . . . . .  | 19          |           |
| 2.2 Probability [A]⊗ . . . . .   | 19          |           |
| 2.3 Probability Density [A]⊗ . . . . .                                 | 22          |           |
| 2.4 Expectation and Mean [A]⊗ . . . . .                                | 24          |           |
| 2.5 Variance and Standard Deviation [A]⊗ . . . . .                     | 25          |           |
| 2.6 Covariance [A]⊗ . . . . .  | 26          |           |
| 2.7 Online Algorithms for Mean, Variance and Covariance [C]⊗ . . . . . | 27          |           |
| 2.8 Median and Median Absolute Deviation [A]⊗ . . . . .                | 29          |           |
| 2.9 Quantiles [A]⊗ . . . . .   | 30          |           |
| 2.10 Skewness and Kurtosis [B]⊗ . . . . .                              | 32          |           |
| 2.11 Correlation [A]⊗ . . . . .  | 33          |           |
| 2.11.1 Pearson Correlation [A]⊗ . . . . .                              | 33          |           |
| 2.11.2 Serial Correlation [A]⊗ . . . . .                               | 36          |           |
| 2.11.3 Spearman Rank Correlation [A]⊗ . . . . .                        | 38          |           |
| 2.11.4 Kendall Rank Correlation [A]⊗ . . . . .                         | 39          |           |
| 2.11.5 Biweight Midcorrelation [B]⊗ . . . . .                          | 40          |           |
| 2.12 Exploratory Data Analysis [A]⊗ . . . . .                          | 41          |           |
| 2.12.1 Histograms [A]⊗ . . . . .                                       | 41          |           |
| 2.12.2 Quantile–Quantile (Q–Q) Plots [B]⊗ . . . . .                    | 42          |           |

|  |            |
|--|------------|
| 2.12.3 Boxplots  | 45         |
| 2.13 Mahalanobis Distance                                    | 47         |
| 2.13.1 Mahalanobis Distance and Principal Component Analysis | 47         |
| 2.14 Bayes Theorem   | 49         |
| 2.15 Classification  | 52         |
| 2.16 Clustering  | 54         |
| 2.17 Information Theory                                      | 56         |
| 2.17.1 Entropy   | 58         |
| 2.17.2 Joint Entropy and Conditional Entropy                 | 59         |
| 2.17.3 Relative Entropy                                      | 60         |
| 2.17.4 Mutual Information                                    | 61         |
| Exercises . . . . .  | 62         |
| <b>3 Probability Distributions</b>                           | <b>65</b>  |
| 3.1 Binomial Distribution                                    | 66         |
| 3.2 Poisson Distribution                                     | 68         |
| 3.3 Multinomial Distribution                                 | 68         |
| 3.4 Gaussian Distribution                                    | 69         |
| 3.5 Maximum Likelihood Estimation                            | 73         |
| 3.6 Multivariate Gaussian Distribution                       | 75         |
| 3.7 Conditional and Marginal Gaussian Distributions          | 77         |
| 3.8 Gamma Distribution                                       | 78         |
| 3.9 Beta Distribution  | 80         |
| 3.10 Von Mises Distribution                                  | 82         |
| 3.11 Extreme Value Distributions                             | 83         |
| 3.12 Gaussian Mixture Model                                  | 86         |
| 3.12.1 Expectation–Maximization (EM) Algorithm               | 90         |
| 3.13 Kernel Density Estimation                               | 91         |
| 3.14 Re-expressing Data                                      | 93         |
| 3.15 Student <i>t</i> -distribution                          | 95         |
| 3.16 Chi-squared Distribution                                | 97         |
| Exercises . . . . .  | 99         |
| <b>4 Statistical Inference</b>                               | <b>101</b> |
| 4.1 Hypothesis Testing                                       | 101        |
| 4.2 Student <i>t</i> -test                                   | 104        |
| 4.2.1 One-Sample <i>t</i> -test                              | 105        |
| 4.2.2 Independent Two-Sample <i>t</i> -test                  | 105        |
| 4.2.3 Dependent <i>t</i> -test for Paired Samples            | 107        |
| 4.2.4 Serial Correlation                                     | 107        |
| 4.2.5 Significance Test for Correlation                      | 109        |
| 4.3 Non-parametric Alternatives to <i>t</i> -test            | 111        |
| 4.3.1 Wilcoxon–Mann–Whitney Test                             | 111        |
| 4.3.2 Wilcoxon Signed-Rank Test                              | 114        |
| 4.4 Confidence Interval                                      | 115        |

*Contents*

vii

|          |   |            |
|----------|---|------------|
| 4.4.1    | Confidence Interval for Population Mean  . . . . .                               | 116        |
| 4.4.2    | Confidence Interval for Correlation  . . . . .                                   | 118        |
| 4.5      | Goodness-of-Fit Tests  . . . . .   | 119        |
| 4.5.1    | One-Sample Goodness-of-Fit Tests  . . . . .                                      | 119        |
| 4.5.2    | Two-Sample Goodness-of-Fit Tests  . . . . .                                      | 121        |
| 4.6      | Test of Variances  . . . . .   | 124        |
| 4.7      | Mann–Kendall Trend Test  . . . . .   | 125        |
| 4.8      | Bootstrapping  . . . . .   | 126        |
| 4.9      | Field Significance  . . . . .  | 131        |
|          | Exercises . . . . .   | 134        |
| <b>5</b> | <b>Linear Regression</b>  | <b>137</b> |
| 5.1      | Simple Linear Regression  . . . . .  | 137        |
| 5.1.1    | Partition of Sums of Squares  . . . . .  | 139        |
| 5.1.2    | Confidence Interval for Regression Parameters  . . . . .                         | 141        |
| 5.1.3    | Confidence Interval and Prediction Interval for the Response Variable  . . . . . | 143        |
| 5.1.4    | Serial Correlation  . . . . .  | 144        |
| 5.2      | Multiple Linear Regression  . . . . .  | 145        |
| 5.2.1    | Gauss–Markov Theorem  . . . . .  | 147        |
| 5.2.2    | Partition of Sums of Squares  . . . . .  | 148        |
| 5.2.3    | Standardized Predictors  . . . . .   | 148        |
| 5.2.4    | Analysis of Variance (ANOVA)  . . . . .  | 149        |
| 5.2.5    | Confidence and Prediction Intervals  . . . . .                                 | 151        |
| 5.3      | Multivariate Linear Regression  . . . . .                                      | 153        |
| 5.4      | Online Learning with Linear Regression  . . . . .                              | 154        |
| 5.5      | Circular and Categorical Data  . . . . .                                       | 156        |
| 5.6      | Predictor Selection  . . . . .   | 158        |
| 5.7      | Ridge Regression  . . . . .  | 161        |
| 5.8      | Lasso  . . . . .   | 165        |
| 5.9      | Quantile Regression  . . . . .   | 167        |
| 5.10     | Generalized Least Squares  . . . . .   | 168        |
| 5.10.1   | Optimal Fingerprinting in Climate Change  . . . . .                            | 170        |
|          | Exercises . . . . .   | 170        |
| <b>6</b> | <b>Neural Networks</b>  | <b>173</b> |
| 6.1      | McCulloch and Pitts Model  . . . . .   | 174        |
| 6.2      | Perceptrons  . . . . .   | 175        |
| 6.2.1    | Limitation of Perceptrons  . . . . .   | 178        |
| 6.3      | Multi-layer Perceptrons  . . . . .   | 180        |
| 6.3.1    | Comparison with Polynomials  . . . . .   | 185        |
| 6.3.2    | Hidden Neurons  . . . . .  | 186        |
| 6.3.3    | Monotonic Multi-layer Perceptron Model  . . . . .                              | 187        |
| 6.4      | Extreme Learning Machines  . . . . .   | 189        |
| 6.4.1    | Online Learning  . . . . .   | 193        |
| 6.4.2    | Random Vector Functional Link  . . . . .                                       | 194        |

|           |   |            |
|-----------|---|------------|
| 6.5       | Radial Basis Functions                                 | 195        |
| 6.6       | Modelling Conditional Distributions                    | 199        |
| 6.6.1     | Mixture Density Network                                | 201        |
| 6.7       | Quantile Regression                                    | 204        |
| 6.8       | Historical Development of NN in Environmental Science  | 207        |
| 6.8.1     | Remote Sensing   | 208        |
| 6.8.2     | Hydrology    | 212        |
| 6.8.3     | Atmospheric Science                                    | 213        |
| 6.8.4     | Oceanography   | 213        |
| Exercises |   | 214        |
| <b>7</b>  | <b>Non-linear Optimization</b>  | <b>216</b> |
| 7.1       | Extrema and Saddle Points                              | 216        |
| 7.2       | Gradient Vector in Optimization                        | 219        |
| 7.3       | Back-Propagation                                       | 221        |
| 7.4       | Training Protocol                                      | 224        |
| 7.5       | Gradient Descent Method                                | 225        |
| 7.6       | Stochastic Gradient Descent                            | 227        |
| 7.7       | Conjugate Gradient Method                             | 229        |
| 7.8       | Quasi-Newton Methods                                 | 232        |
| 7.9       | Non-linear Least Squares Methods                     | 234        |
| 7.10      | Evolutionary Algorithms                              | 236        |
| 7.11      | Hill Climbing                                        | 238        |
| 7.12      | Genetic Algorithm                                    | 239        |
| 7.13      | Differential Evolution                               | 241        |
| Exercises |   | 244        |
| <b>8</b>  | <b>Learning and Generalization</b>  | <b>245</b> |
| 8.1       | Mean Squared Error and Maximum Likelihood            | 245        |
| 8.2       | Objective Functions and Robustness                   | 247        |
| 8.3       | Variance and Bias Errors                             | 250        |
| 8.4       | Regularization                                       | 251        |
| 8.4.1     | Weight Penalty                                       | 251        |
| 8.4.2     | Early Stopping                                       | 254        |
| 8.5       | Cross-Validation                                     | 255        |
| 8.6       | Hyperparameter Tuning                                | 258        |
| 8.7       | Ensemble Methods                                     | 261        |
| 8.7.1     | Bagging    | 263        |
| 8.7.2     | Error of Ensemble                                    | 263        |
| 8.7.3     | Unequal Weighting of Ensemble Members                | 266        |
| 8.7.4     | Stacking   | 268        |
| 8.8       | Dropout    | 269        |
