	<i>Preface</i>	<i>page</i> vii
1	Prologue: how to produce forecasts	1
	1.1 Physical processes and observations	1
	1.2 Data driven forecasting	6
	1.3 Model driven forecasting and data assimilation	15
	1.4 Guide to literature	28
	1.5 Appendix: Numerical implementation of tent map iteration	28
Part I	Quantifying Uncertainty	31
2	Introduction to probability	33
	2.1 Random variables	35
	2.2 Coupling of measures and optimal transportation	46
	2.3 Guide to literature	62
	2.4 Appendix: Conditional expectation and best approximation	62
	2.5 Appendix: Dual formulation of optimal linear transportation	63
3	Computational statistics	65
	3.1 Deterministic quadrature	66
	3.2 Monte Carlo quadrature	74
	3.3 Sampling algorithms	81
	3.4 Guide to literature	93
	3.5 Appendix: Random probability measures	93
	3.6 Appendix: Polynomial chaos expansion	95
4	Stochastic processes	96
	4.1 Dynamical systems and discrete-time Markov processes	96
	4.2 Stochastic difference and differential equations	111
	4.3 Probabilistic forecasting and ensemble prediction	117
	4.4 Scoring rules for probabilistic forecasting	121
	4.5 Guide to literature	130

5	Bayesian inference	131
	5.1 Inverse problems from a probabilistic perspective	132
	5.2 Sampling the posterior	142
	5.3 Optimal coupling approach to Bayesian inference	148
	5.4 Guide to literature	158
	5.5 Appendix: BLUE estimator	159
	5.6 Appendix: A geometric view on Brownian dynamics	160
	5.7 Appendix: Discrete Fokker–Planck equation	165
	5.8 Appendix: Linear transport algorithm in one dimension	168
Part II	Bayesian Data Assimilation	169
6	Basic data assimilation algorithms	171
	6.1 Kalman filter for linear model systems	175
	6.2 Variational data assimilation	179
	6.3 Particle filters	187
	6.4 Guide to literature	196
	6.5 Appendix: Posterior consistency	196
	6.6 Appendix: Weak constraint 4DVar	198
7	McKean approach to data assimilation	200
	7.1 Ensemble Kalman filters	206
	7.2 Ensemble transform particle filter	213
	7.3 Guide to literature	223
	7.4 Appendix: Linear transport algorithm	224
	7.5 Appendix: Gaussian mixture transform filter	226
8	Data assimilation for spatio-temporal processes	229
	8.1 Spatio-temporal model systems	232
	8.2 Ensemble inflation	242
	8.3 Localisation	248
	8.4 Guide to literature	257
9	Dealing with imperfect models	259
	9.1 Model selection	260
	9.2 Parameter estimation	266
	9.3 Mollified data assimilation	270
	9.4 Guide to literature	283
	9.5 Appendix: Continuous-time filtering	283
	<i>A postscript</i>	288
	<i>References</i>	289
	<i>Index</i>	295
