

Index

- accuracy in parameter estimation, 220, 221
 aliased, 92
 ancillary variable, 259–261, 269–271, 381
 ANCOVA, 166, 169, 170, 248–250, 306
 assay window, 76, 202
 autocorrelation, 74
- bias
 citation, 37
 combination of, 19
 confirmation, 15
 due to binning, 232, 233
 hindsight, 17
 optional stopping, 258–260
 publication, 29
 sources, 34
- biological effect, 53
 biological unit, 27, 52, 95, 251–253
 blinding, 17, 21, 24, 26, 51, 59, 62, 74, 193
 blocking, 59, 60, 89, 115, 170, 245–247, 263–266, 304, 323
- cage effects, 68, 89, 98
 carry-over effect, 105, 218, 219
 censored, 194, 289
 cluster-randomised trials, 121
 coefficient of variation, 14, 197
 Cohen's *d*, 204, 205
 common cause variation, 57
 compartment model, 240–242
 complete case analysis, 183
 complete spatial randomness, 21
 completely randomised design, 119, 171
 composite scores, 15
 compound symmetry, 184
 concordance correlation coefficient, 199
 confounding, 36, 57, 78, 247–249
 factors, 67
 time, 86
 useful, 91
- controls, 74
 baseline, 75
 naive, 74
 negative, 74
 placebo, 74
- positive, 75
 sham, 75
 vehicle, 74
- crossed factor, 66, 68, 116, 251–253, 294, 318
 crude corrections, 306
- data-generating mechanism, 141
 degrees of freedom, 26, 132
 derived variable, 162, 279
 design matrix, 237–239
 design of experiments, 48
 design points, 216, 217, 222, 223, 227–230
 design region, *see* design space
 design space, 50, 221–223, 266–268
 diagnostic graph, 190, 375
 drift, 87
- effect size, 2, 42, 204–207
 efficiency, 222, 223
 end-aligned design, 76, 264–266
 epistasis, 71
 error, 54
 expectancy effects, 17
 experimental error, 54, 98
 experimental unit, 27, 35, 52, 96
- factor analysis, 15
 factor level, 53
 familywise error, 154
 Fisher's LSD, 138, 153
 fitted values, 376, 379
 fixed effect, 65
 formula, 364, 375
 frequentist
 introduction to, 37
 problems with, 41
- front-aligned design, 76, 264–266
 fundamental experimental design equation, 53, 253–255
- generalisability, 2, 58, 113
 generalised randomised block design, 174
 group sequential design, 259–261

- HARKing, 35
- ignorable missingness, 290
- incomplete block designs, 83
- interaction, 28, 53, 56, 68, 128, 151, 169, 172, 179, 181, 250–252, 254–256
- interim analysis, 259–261
- interquartile range, 315
- intraclass correlation, 252–254
- Johnson–Neyman procedure, 169
- latent variable, 13
- linear combination, 14
- linear combinations, 299
- location shift, 199
- marginal effect, 153
- mean squares, 134
- measurement error, 14, 55, 104, 196
- median absolute deviation, 205, 206
- meta-analysis, 29
- near-zero variance, 287, 299
- nested factor, 67, 116, 251–253, 294, 318
- nil hypothesis, 41
- nonorthogonal, 128, 170
- nuisance variable, 54, 250–252
- null hypothesis significance testing, 38
- objects, 344
