Locators in **bold** refer to figures and tables

- ABM (attention bias modification), 268
- absolute ceiling effect, assessment, 235
- abuse, childhood, 5. *see also* childhood trauma
- academic functioning. *see* educational functioning
- action-based cognitive remediation (ABCR), **315**, 316, **317**
- activities of daily living (ADL), 16, 161
- activity scheduling, cognitive remediation, 315, 316
- acute clinical stage, inflammation, 163, **164**
- AD. *see* Alzheimer's disease
- ADHD. *see* attention deficit/hyperactivity disorder
- adherence to treatment, 161
- clinician–patient relationship, 42, 43
- and cognitive dysfunction, 32–33
- exercise, 333
- functional outcomes, 140
- adolescent depression. *see* pediatric depression
- Advanced Finances Task (AFT), 139
- aerobic exercise. *see* exercise
- affective neuroscience, 257
- age of onset, 1, 113, 117, 119. *see also* late-onset MDD
- agitation. *see* psychomotor speed
- AIC (anti-inflammatory cytokines), 162
- alcohol intoxication, 18, **19**, 20
- algorithms, assessment, 37
- alternative medicine, 275, **286**
- Alzheimer's disease (AD), 16, **17**, **18**, 24, 237
- insulin resistance, 214, 215, 216
- American Academy of Child and Adolescent Psychiatry (AACAP), 47
- amphetamine, 23
- amygdala
- anatomy, 63
- biological mechanisms of MDD development, 5–6
- biomarkers of illness, 149, 153, 154
- emotional processing, 83, 202, 263, 264
- inflammation, 168, 169
- negative cognitive bias, 202
- neural circuits, 197
- post-recovery deficits, 111
- progressive cognitive deficits, 117
- rumination, 202–203
- social emotional processing, 83, 93, **96**
- social exclusion, 88
- anatomy of brain, 60–66, 116–117
- anhedonia, 83, 84
- animal studies, erythropoietin, **292**, 293
- ANT (Attention Network Task), **49–50**, 51
- antecedents to illness. *see* predictions of future depression; premorbid cognitive function
- anterior cingulate cortex. *see* cingulate cortex
- anticholinergic effects, medication, 283. *see also* tricyclic antidepressants
- antidepressant medication, 275–280, **278**, 283
- amygdala, 197
- baseline cognitive function, 274
- biomarkers of illness, 74, 151
- combined with CBT, 274
- effects on cognitive dysfunction, 160, 275
- emotional processing, 264
- erythropoietin, 291
- functional outcomes, 126
- hot cognition, 72, 73
- insulin resistance, 213
- neurotoxicity hypothesis, 119, 120
- novel/fast-acting, 74–76
- response to treatment, 169, 260
- social cognition, 106
- see also* SNRIs; SSRIs; tricyclic antidepressants
- antiglucocorticoid medication, 188
- anti-inflammatory cytokines (AIC), 162
- anti-inflammatory treatments, 162
- erythropoietin, 293
- insulin treatment, 282–283
- anxiety disorders, 39, 64–65, 83
- apoptosis, 117, 293
- Applied Cognition-General Concerns (ACGC) Scale, 250
- arithmetic, 261, 309–310
- ARTIST study, pain comorbidity, 39
- ASRS (Attention Deficit Hyperactivity Disorder Self-Report Scale), 280
- assessment, indications for, 35–37. *see also* measurement
- astrocytes, 61–62
- attention, 1
- age of illness onset, 113
- biomarkers of illness, 147, **147**, 149, 150–151
- clinician–patient relationship, **42** and functional outcomes, **129–134**, 258–260
- measures, 229–230, 231
- negative cognitive bias, 201–202
- neural circuits, 199, 201–202
- number of lifetime depressive episodes, 116
- objective measures, **36**
- pediatric depression, 48–52
- post-recovery deficits, 111
- predictive validity of deficits, 15–17, 17
- psychotherapy, 119–120
- and rumination, 264–265
- three-component model, 6
- treatment interventions, 275–276
- see also* cold cognition
- attention bias modification (ABM), 268
- Attention Control Training Intervention, 309
- attention-deficit/hyperactivity disorder (ADHD)
- antecedents to illness, 3–5, **8**, **8–11**
- white matter integrity, 65
- working memory, 71
- Attention/Deficit Hyperactivity Disorder Self-Report Scale (ASRS), 280
- Attention Network Task (ANT), **49–50**, 51

- Auditory Verbal Learning Test (AVLT), 55
- Australian study, alcohol intoxication, 18–20, **19**
- autism, social cognition, 92
- autonomic nervous system, and insulin resistance, 210
- BAC (blood alcohol concentration), 18–19, **19**
- baseline cognitive function and antidepressant medication, 274
- measures, 237
- primary care, 37, 41
- basolateral nucleus (BLA), amygdala, 168
- BBB (blood–brain barrier), 61–62, 289, 291
- BDNF. *see* brain-derived neurotrophic factor
- BDQ (Brief Disability Questionnaire), 128, 135
- Beck Depression Inventory (BDI), 32–33, **33**
- Beck model. *see* cognitive model of depression
- Behavior and Symptom Identification Scale (BASIS-32), 138
- behavioral inhibition. *see* response inhibition
- behavioral treatment interventions. *see* cognitive behavioral therapy; cognitive remediation therapy; diet; exercise
- benzodiazepines, 40, 118
- bias, memory, 265, 268–269. *see also* negative cognitive bias
- biofeedback, 266
- biological models. *see* neurobiology of depression
- biomarkers of illness, 145, **147**, **150**, 151–154
- antidepressant medication, 151
- cytokines, 169
- default mode network, 217
- dehydroepiandrosterone, 183
- early morning cortisol, 74
- endophenotypes, 145–146, 147–148, 149
- epiphenomena, 148, 151–154
