<i>Preface</i>	ix
0 A few things you need to know	1
0.1 Probability notation and prerequisites	1
0.2 Little- o and big- O notation	3
0.3 Stirling's approximation	4
1 Longest increasing subsequences in random permutations	5
1.1 The Ulam–Hammersley problem	5
1.2 The Erdős–Szekerés theorem	7
1.3 First bounds	8
1.4 Hammersley's theorem	10
1.5 Patience sorting	15
1.6 The Robinson–Schensted algorithm	17
1.7 Young diagrams and Young tableaux	20
1.8 Plancherel measure	24
1.9 The hook-length formula	25
1.10 An algorithm for sampling random Young tableaux	30
1.11 Plancherel measure and limit shapes	31
1.12 An asymptotic hook-length formula	34
1.13 A variational problem for hook integrals	39
1.14 Transformation to hook coordinates	41
1.15 Analysis of the functional	47
1.16 Computation of $J(h_0)$	55
1.17 The limit shape theorem	55
1.18 Irreducible representations of S_n with maximal dimension	62
1.19 The Plancherel growth process	64
1.20 Final version of the limit shape theorem	68

vi	<i>Contents</i>	
	Exercises	70
2	The Baik–Deift–Johansson theorem	79
2.1	The fluctuations of $L(\sigma_n)$ and the Tracy–Widom distribution	79
2.2	The Airy ensemble	82
2.3	Poissonized Plancherel measure	86
2.4	Discrete determinantal point processes	92
2.5	The discrete Bessel kernel	103
2.6	Asymptotics for the Airy function and kernel	115
2.7	Asymptotics for \mathbf{J}_θ	119
2.8	The limit law for Poissonized Plancherel measure	123
2.9	A de-Poissonization lemma	127
2.10	An analysis of F_2	130
2.11	Edge statistics of Plancherel measure	143
2.12	Epilogue: convergence of moments	148
	Exercises	149
3	Erdős–Szekeres permutations and square Young tableaux	157
3.1	Erdős–Szekeres permutations	157
3.2	The tableau sandwich theorem	159
3.3	Random Erdős–Szekeres permutations	163
3.4	Random square Young tableaux	165
3.5	An analogue of Plancherel measure	170
3.6	An asymptotic hook-length formula for square tableaux	171
3.7	A family of variational problems	172
3.8	Minimizing the functional	175
3.9	Some integral evaluations	180
3.10	Evaluation of $Q(\tilde{g}_r)$	184
3.11	The limiting growth profile	187
3.12	Growth of the first row of $\Lambda^{(n,k)}$	188
3.13	Proof of the limit shape theorem	195
3.14	Square Young tableaux as an interacting particle system	198
	Exercises	204
4	The corner growth process: limit shapes	211
4.1	A random walk on Young diagrams	211
4.2	Corner growth in continuous time	215
4.3	Last-passage percolation	224
4.4	Analysis of the slowed down passage times	228

Cambridge University Press

Dan Romik

Table of Contents

[More information](#)

<i>Contents</i>		vii
4.5	Existence of the limit shape	232
4.6	Recovering the limit shape	239
4.7	Rost's particle process	245
4.8	The multicorner growth process	253
	Exercises	264
5	The corner growth process: distributional results	273
5.1	The fluctuations of $G(m, n)$ and the Tracy–Widom distribution	273
5.2	Generalized permutations	275
5.3	Semistandard Young tableaux and the RSK algorithm	278
5.4	An enumeration formula for semistandard tableaux	281
5.5	The distribution of $G(m, n)$	286
5.6	The Fredholm determinant representation	290
5.7	Orthogonal polynomials	291
5.8	Orthogonal polynomial ensembles	297
5.9	The Laguerre polynomials	301
5.10	Asymptotics for the Laguerre kernels	304
5.11	Asymptotic analysis of $I_n(h, x)$	310
5.12	Proof of Theorem 5.25	318
5.13	The passage times in the multicorner growth process	321
5.14	Complex Wishart matrices	322
	Exercises	325
<i>Appendix</i>	Kingman's subadditive ergodic theorem	333
	<i>Notes</i>	335
	<i>References</i>	340
	<i>Index</i>	348
