

Index

- Aharonov-Bohm, 281
 alkali gas, 7, 41, 42, 46, 121, 194
 analogue gravity, 11
 anisotropic condensate, 215–218
 anomalous velocity, 276
 antiferromagnet(s), 10
 artificial electric field, 304
 artificial gauge field, 290, 299–318
 artificial magnetic field, 304
 atom chip(s), 11
 atomtronics, 11
 axion condensate, 12, 14, 15, 572, 608–618
 axion-axion interactions, 611
- BCS gap, 587
 BCS superconductivity, 4, 7, 16, 66, 189, 192, 232, 244
 BEC-BCS crossover, 4–5, 7, 9, 11, 45, 48, 168, 179, 231–245, 251, 390
 Bekenstein entropy, 628
 Berezinskii-Kosterlitz-Thouless (BKT) transition, 11, 13, 61, 78, 129, 168, 187–201, 209, 216, 219, 225, 339–343, 390, 399, 429
 Berry curvature (Berry phase), 276
 biexciton(s), 5
 Big Bang, 594, 598, 609
 black hole, 571, 620–633
 Bloch oscillations, 275
 Bogoliubov, 240, 317, 328–342, 379
 Bogoliubov spectrum, 63, 177, 208, 210
 Bose glass, 16, 462, 469–474, 549, 563
 Bose-Hubbard, 48, 255
 bosonic stimulation, *see* stimulated scattering
 bosonization, 556, 559
 box potential, 109
 Bragg scattering, 262
 Bragg spectroscopy, 131
 branes, 603
 buffer gas cooling, 48
- calcium, 46
 causal connection, 603
 caustics, 618
 cesium, 42, 45
 cesium-lithium mixture, 181
 charge density wave, 232, 243–245
 chemical equilibrium, 395, 396
 chemical potential, 66, 101–111, 121–122, 127, 138, 154, 169–179, 188, 234–240, 304, 305, 324–340, 371, 392–395, 404, 411–421, 470, 494, 506–516, 531–541, 546, 551–563, 575–587
 Chern bands (Chern number), 274–294
 chiral edge state, 294
 chromium, 46
 classical field approximation, 119, 120, 122, 132, 226
 classical wave approximation, 10, 13
 classical wave condensate, 14, 15
 coherence
 first-order, 156, 195, 393, 410
 second-order, 156, 394, 401
 coherent state, 87–90
 cold axions, 609
 collective excitation, 48, 65, 125, 210, 240, 322, 323, 353, 413, 477, 536
 collective modes, 240, 305, 317, 351, 357, 359
 colour-flavour-locked phase, 586, 588
 compressibility, 326–343, 469
 condensate, 13
 axion, 12, 14, 15, 572, 608–618
 bilayer exciton, 14, 15
 driven-dissipative, 13, 78, 187–201, 205–227
 dynamics, 485, 535
 entropy, 85–87
 exciton, 8, 43, 206, 390
 fluctuations, 556
 focussing, 130
 formation, 12, 77, 87, 117–140
 fraction, 31
 graviton, 572, 620–633
 in classical waves, 14, 15

- in nuclei, 14, 15
- kaon, 12, 571, 577
- magnon, 8, 10, 14, 15, 43, 206, 390, 410, 493–503, 506, 516–520, 533, 549, 552, 558
- multicomponent, 11, 128, 251, 252, 362
- non-equilibrium, 9, 69, 409–421, 432, 462–465
- one-dimensional, 130, 135, 153
- optical, 390
- photon, 8, 10, 14, 15, 43, 140, 206, 389, 391, 410, 416
- pion, 577
- polariton, 8, 14, 15, 43, 57, 93–95, 121, 194–201, 389, 396, 410, 416, 424, 446, 462
- quark-antiquark, 571
- room-temperature, 10
- spinor, 11, 224, 372, 424, 425, 428, 477–490
- spinor-dipolar, 381
- stability, 84–85, 240
- triplon, 8, 10
- two-component, 494
- two-dimensional, 8, 40, 129, 172–174, 209
- ultracold atoms, 6, 34, 348
- condensation
 - in momentum space, 32
 - in real space, 31
- Cooling
 - buffer gas, *see* buffer gas cooling
 - evaporative, *see* evaporative cooling
 - laser, *see* laser cooling
 - quench, 78, 598, *see* quench dynamics
 - sympathetic, *see* sympathetic cooling
- Cooper pair, 232, 238, 571, 593
- cosmological brane, 13
- cosmological constant, 631, 633
- cosmological horizon, 631, 632
- cosmological inflation, 603, 610
