Preface ix
Acknowledgments xvii

Part I Basics 1

1 Economics and Econophysics 3
1.1 Physics 3
1.2 Economics 7
1.3 Econophysics 17
1.4 Physics, Reality, and the Natural World 20
1.5 Economics, Reality, and the Real World 27
1.6 Econophysics and the Empirical World 33

2 Measuring the Income Distribution 56
2.1 Basic Definitions and Results 56
2.2 Two-Components Distribution 63
2.3 Income Distribution Functions 64
2.4 Empirical Evidence 81
2.5 Limitations of Curve Fitting 102

3 Piketty’s Capital in the Twenty-First Century 105
3.1 Data-Driven Analysis 105
3.2 Phenomenology 107
3.3 Pluralistic Economic Theory 115
3.4 Fundamental Laws of Capitalism 116
3.5 The Mechanisms for Rising Inequality 136
3.6 Summary of the Main Results 141
3.7 Econophysics after Piketty 142
## Contents

### Part II Statistical Econophysics

4 Stochastic Dynamics of Income and Wealth

4.1 Uncertainty and Risk in Physics and Economics

4.2 Kinetic Models of Income and Wealth Distribution

4.3 Political Economy

4.4 Class Redistribution

4.5 Econophysics of Income Distribution and Piketty

### Part III Economic Cycles

5 Circular Flows in Economic Systems

5.1 Economic Growth and Trade Cycles

5.2 Uncertainty, Confidence, Investment, and Instability

5.3 The Goodwin Growth-Cycle Macroeconomic Dynamics

5.4 Empirical Evidence of the Goodwin Macrodynamics

5.5 Conclusions

6 Goodwin-Type Distributive Macrodynamics

6.1 Structural Stability

6.2 Cyclic Evolution in the Tsallis Distribution

6.3 The Boyd–Blatt Model

6.4 The Keen Model

6.5 Other Extensions of the Goodwin Model
