## Contents

<i>Introduction</i>	<i>page</i> 1
<b>Part One The algebraic environment</b> 5	
<b>1 Groups and vector spaces</b>	<b>7</b>
1.1 Groups	7
1.2 Vector spaces	12
1.3 Duality of vector spaces	14
<b>2 Algebras, representations and modules</b>	<b>16</b>
2.1 Algebras	16
2.2 Group representations	22
2.3 The quaternions	24
2.4 Representations and modules	28
2.5 Module homomorphisms	29
2.6 Simple modules	30
2.7 Semi-simple modules	32
<b>3 Multilinear algebra</b>	<b>36</b>
3.1 Multilinear mappings	36
3.2 Tensor products	38
3.3 The trace	42
3.4 Alternating mappings and the exterior algebra	44
3.5 The symmetric tensor algebra	49
3.6 Tensor products of algebras	52
3.7 Tensor products of super-algebras	56

<b>Part Two</b>	<b>Quadratic forms and Clifford algebras</b>	59
<b>4</b>	<b>Quadratic forms</b>	61
4.1	Real quadratic forms	61
4.2	Orthogonality	63
4.3	Diagonalization	64
4.4	Adjoint mappings	68
4.5	Isotropy	69
4.6	Isometries and the orthogonal group	71
4.7	The case $d = 2$	73
4.8	The Cartan-Dieudonné theorem	76
4.9	The groups $SO(3)$ and $SO(4)$	80
4.10	Complex quadratic forms	82
4.11	Complex inner-product spaces	84
<b>5</b>	<b>Clifford algebras</b>	86
5.1	Clifford algebras	86
5.2	Existence	89
5.3	Three involutions	91
5.4	Centralizers, and the centre	95
5.5	Simplicity	96
5.6	The trace and quadratic form on $\mathcal{A}(E, q)$	100
5.7	The group $\mathcal{G}(E, q)$ of invertible elements of $\mathcal{A}(E, q)$	101
<b>6</b>	<b>Classifying Clifford algebras</b>	104
6.1	Frobenius' theorem	104
6.2	Clifford algebras $\mathcal{A}(E, q)$ with $\dim E = 2$	106
6.3	Clifford's theorem	108
6.4	Classifying even Clifford algebras	109
6.5	Cartan's periodicity law	110
6.6	Classifying complex Clifford algebras	113
<b>7</b>	<b>Representing Clifford algebras</b>	114
7.1	Spinors	114
7.2	The Clifford algebras $\mathcal{A}_{k,k}$	117
7.3	The algebras $\mathcal{B}_{k,k+1}$ and $\mathcal{A}_{k,k+1}$	119
7.4	The algebras $\mathcal{A}_{k+1,k}$ and $\mathcal{A}_{k+2,k}$	120
7.5	Clifford algebras $\mathcal{A}(E, q)$ with $\dim E = 3$	121
7.6	Clifford algebras $\mathcal{A}(E, q)$ with $\dim E = 4$	124
7.7	Clifford algebras $\mathcal{A}(E, q)$ with $\dim E = 5$	131
7.8	The algebras $\mathcal{A}_6, \mathcal{B}_7, \mathcal{A}_7$ and $\mathcal{A}_8$	135

Table of Contents

[More information](#)*Contents*

vii

<b>8</b>	<b>Spin</b>	137
8.1	Clifford groups	137
8.2	Pin and Spin groups	139
8.3	Replacing $q$ by $-q$	141
8.4	The spin group for odd dimensions	142
8.5	Spin groups, for $d = 2$	142
8.6	Spin groups, for $d = 3$	144
8.7	Spin groups, for $d = 4$	146
8.8	The group $\text{Spin}_5$	147
8.9	Examples of spin groups for $d \geq 6$	148
8.10	Table of results	151
 <b>Part Three Some Applications</b>		153
<b>9</b>	<b>Some applications to physics</b>	155
9.1	Particles with spin 1/2	155
9.2	The Dirac operator	156
9.3	Maxwell's equations	159
9.4	The Dirac equation	161
<b>10</b>	<b>Clifford analyticity</b>	164
10.1	Clifford analyticity	164
10.2	Cauchy's integral formula	166
10.3	Poisson kernels and the Dirichlet problem	167
10.4	The Hilbert transform	169
10.5	Augmented Dirac operators	170
10.6	Subharmonicity properties	172
10.7	The Riesz transform	174
10.8	The Dirac operator on a Riemannian manifold	177
<b>11</b>	<b>Representations of <math>\text{Spin}_d</math> and <math>SO(d)</math></b>	179
11.1	Compact Lie groups and their representations	179
11.2	Representations of $SU(2)$	181
11.3	Representations of $\text{Spin}_d$ and $SO(d)$ for $d \leq 4$	182
<b>12</b>	<b>Some suggestions for further reading</b>	186
