<i>Preface</i>	<i>page</i> ix
<i>Summary</i>	xi
PART I PRELIMINARIES	
1 Basic algebraic number theory	3
1.1 Characteristic polynomial, trace, norm, discriminant	3
1.2 Ideal theory for algebraic number fields	5
1.3 Extension of ideals; norm of ideals	7
1.4 Discriminant, class number, unit group and regulator	9
1.5 Explicit estimates	11
1.6 Absolute values: generalities	12
1.7 Absolute values and places on number fields	15
1.8 S -integers, S -units and S -norm	17
1.9 Heights	19
1.9.1 Heights of algebraic numbers	19
1.9.2 v -adic norms and heights of vectors and polynomials	21
1.10 Effective computations in number fields	23
1.11 p -adic numbers	26
2 Algebraic function fields	30
2.1 Valuations	30
2.2 Heights	33
2.3 Derivatives and genus	35
2.4 Effective computations	37
3 Tools from Diophantine approximation and transcendence theory	42

3.1	The Subspace Theorem and some variations	42
3.2	Effective estimates for linear forms in logarithms	51
PART II UNIT EQUATIONS AND APPLICATIONS		
4	Effective results for unit equations in two unknowns over number fields	61
4.1	Effective bounds for the heights of the solutions	62
4.1.1	Equations in units of a number field	62
4.1.2	Equations with unknowns from a finitely generated multiplicative group	64
4.2	Approximation by elements of a finitely generated multiplicative group	67
4.3	Tools	68
4.3.1	Some geometry of numbers	68
4.3.2	Estimates for units and S -units	72
4.4	Proofs	79
4.4.1	Proofs of Theorems 4.1.1 and 4.1.2	79
4.4.2	Proofs of Theorems 4.2.1 and 4.2.2	81
4.4.3	Proofs of Theorem 4.1.3 and its corollaries	84
4.5	Alternative methods, comparison of the bounds	87
4.5.1	The results of Bombieri, Bombieri and Cohen, and Bugeaud	87
4.5.2	The results of Murty, Pasten and von Känel	88
4.6	The abc-conjecture	89
4.7	Notes	93
4.7.1	Historical remarks and some related results	93
4.7.2	Some notes on applications	94
5	Algorithmic resolution of unit equations in two unknowns	96
5.1	Application of Baker's type estimates	97
5.1.1	Infinite places	100
5.1.2	Finite places	102
5.2	Reduction of the bounds	103
5.2.1	Infinite places	103
5.2.2	Finite places	105
5.3	Enumeration of the "small" solutions	111
5.4	Examples	119
5.5	Exceptional units	121
5.6	Supplement: LLL lattice basis reduction	123
5.7	Notes	126

6	Unit equations in several unknowns	128
6.1	Results	130
6.1.1	A semi-effective result	130
6.1.2	Upper bounds for the number of solutions	131
6.1.3	Lower bounds	134
6.2	Proofs of Theorem 6.1.1 and Corollary 6.1.2	136
6.3	A sketch of the proof of Theorem 6.1.3	140
6.3.1	A reduction	140
6.3.2	Notation	142
6.3.3	Covering results	142
6.3.4	The large solutions	144
6.3.5	The small solutions, and conclusion of the proof	147
6.4	Proof of Theorem 6.1.4	148
6.5	Proof of Theorem 6.1.6	158
6.6	Proofs of Theorems 6.1.7 and 6.1.8	161
6.7	Notes	165
7	Analogues over function fields	173
7.1	Mason's inequality	174
7.2	Proofs	176
7.3	Effective results in the more unknowns case	178
7.4	Results on the number of solutions	182
7.5	Proof of Theorem 7.4.1	183
7.5.1	Extension to the \mathbf{k} -closure of Γ	183
7.5.2	Some algebraic geometry	185
7.5.3	Proof of Theorem 7.5.1	188
7.6	Results in positive characteristic	192
8	Effective results for unit equations in two unknowns over finitely generated domains	197
8.1	Statements of the results	198
8.2	Effective linear algebra over polynomial rings	201
8.3	A reduction	204
8.4	Bounding the degree in Proposition 8.3.7	212
8.5	Specializations	215
8.6	Bounding the height in Proposition 8.3.7	222
8.7	Proof of Theorem 8.1.3	225
8.8	Notes	230
9	Decomposable form equations	231
9.1	A finiteness criterion for decomposable form equations	233

9.2	Reduction of unit equations to decomposable form equations	236
9.3	Reduction of decomposable form equations to unit equations	237
9.3.1	Proof of the equivalence (ii) \iff (iii) in Theorem 9.1.1	238
9.3.2	Proof of the implication (i) \implies (iii) in Theorem 9.1.1	238
9.3.3	Proof of the implication (iii) \implies (i) in Theorem 9.1.1	240
9.4	Finiteness of the number of families of solutions	244
9.5	Upper bounds for the number of solutions	249
9.5.1	Galois symmetric S -unit vectors	251
9.5.2	Consequences for decomposable form equations and S -unit equations	253
9.6	Effective results	257
9.6.1	Thue equations	258
9.6.2	Decomposable form equations in an arbitrary number of unknowns	263
9.7	Notes	272
10	Further applications	284
10.1	Prime factors of sums of integers	284
10.2	Additive unit representations in finitely generated integral domains	287
10.3	Orbits of polynomial and rational maps	291
10.4	Polynomials dividing many k -nomials	298
10.5	Irreducible polynomials and arithmetic graphs	301
10.6	Discriminant equations and power integral bases in number fields	305
10.7	Binary forms of given discriminant	310
10.8	Resultant equations for monic polynomials	315
10.9	Resultant inequalities and equations for binary forms	317
10.10	Lang's Conjecture for tori	321
10.11	Linear recurrence sequences and exponential-polynomial equations	326
10.12	Algebraic independence results	330
