<i>Preface</i>	<i>page</i> xiii
<i>Notation</i>	xvii
0 Preliminaries	1
0.1 Functions and Sets	1
0.2 Scalars	1
0.3 Matrices	1
0.4 Systems of Linear Equations	6
0.5 Determinants	8
0.6 Mathematical Induction	11
0.7 Polynomials	12
0.8 Polynomials and Matrices	14
0.9 Problems	16
0.10 Some Important Concepts	18
1 Vector Spaces	19
1.1 What is a Vector Space?	19
1.2 Examples of Vector Spaces	21
1.3 Subspaces	22
1.4 Linear Combinations and Span	24
1.5 Intersections, Sums, and Direct Sums of Subspaces	26
1.6 Linear Dependence and Linear Independence	28
1.7 Problems	31
1.8 Notes	32
1.9 Some Important Concepts	32
2 Bases and Similarity	33
2.1 What is a Basis?	33
2.2 Dimension	35
2.3 Basis Representations and Linear Transformations	40
2.4 Change of Basis and Similarity	44
2.5 The Dimension Theorem	50
2.6 Problems	52
2.7 Some Important Concepts	53

3	Block Matrices	54
3.1	Row and Column Partitions	54
3.2	Rank	59
3.3	Block Partitions and Direct Sums	63
3.4	Determinants of Block Matrices	68
3.5	Commutators and Shoda's Theorem	71
3.6	Kronecker Products	74
3.7	Problems	76
3.8	Notes	81
3.9	Some Important Concepts	81
4	Inner Product Spaces	82
4.1	The Pythagorean Theorem	82
4.2	The Law of Cosines	82
4.3	Angles and Lengths in the Plane	84
4.4	Inner Products	87
4.5	The Norm Derived from an Inner Product	90
4.6	Normed Vector Spaces	96
4.7	Problems	98
4.8	Notes	101
4.9	Some Important Concepts	101
5	Orthonormal Vectors	102
5.1	Orthonormal Systems	102
5.2	Orthonormal Bases	104
5.3	The Gram–Schmidt Process	105
5.4	The Riesz Representation Theorem	108
5.5	Basis Representations	109
5.6	Adjoint of Linear Transformations and Matrices	111
5.7	Parseval's Identity and Bessel's Inequality	114
5.8	Fourier Series	116
5.9	Problems	120
5.10	Notes	124
5.11	Some Important Concepts	124
6	Unitary Matrices	125
6.1	Isometries on an Inner Product Space	125
6.2	Unitary Matrices	127
6.3	Permutation Matrices	131
6.4	Householder Matrices and Rank-1 Projections	133
6.5	The QR Factorization	138
6.6	Upper Hessenberg Matrices	142
6.7	Problems	143
6.8	Notes	147
6.9	Some Important Concepts	148

7	Orthogonal Complements and Orthogonal Projections	149
7.1	Orthogonal Complements	149
7.2	The Minimum Norm Solution of a Consistent Linear System	152
7.3	Orthogonal Projections	155
7.4	Best Approximation	159
7.5	A Least Squares Solution of an Inconsistent Linear System	164
7.6	Invariant Subspaces	167
7.7	Problems	170
7.8	Notes	174
7.9	Some Important Concepts	174
8	Eigenvalues, Eigenvectors, and Geometric Multiplicity	175
8.1	Eigenvalue–Eigenvector Pairs	175
8.2	Every Square Matrix Has an Eigenvalue	180
8.3	How Many Eigenvalues are There?	183
8.4	Where are the Eigenvalues?	187
8.5	Eigenvectors and Commuting Matrices	194
8.6	Real Similarity of Real Matrices	196
8.7	Problems	197
8.8	Notes	200
8.9	Some Important Concepts	200
9	The Characteristic Polynomial and Algebraic Multiplicity	201
9.1	The Characteristic Polynomial	201
9.2	Algebraic Multiplicity	203
9.3	Similarity and Eigenvalue Multiplicities	205
9.4	Diagonalization and Eigenvalue Multiplicities	206
9.5	The Functional Calculus for Diagonalizable Matrices	210
9.6	Commutants	213
9.7	The Eigenvalues of AB and BA	214
9.8	Problems	216
9.9	Notes	221
9.10	Some Important Concepts	221
10	Unitary Triangularization and Block Diagonalization	223
10.1	Schur’s Triangularization Theorem	223
10.2	The Cayley–Hamilton Theorem	225
10.3	The Minimal Polynomial	228
10.4	Linear Matrix Equations and Block Diagonalization	231
10.5	Commuting Matrices and Triangularization	235
10.6	Eigenvalue Adjustments and the Google Matrix	236
10.7	Problems	238
10.8	Notes	242
10.9	Some Important Concepts	242

x	Contents
11 Jordan Canonical Form	243
11.1 Jordan Blocks and Jordan Matrices	243
11.2 Existence of a Jordan Form	246
11.3 Uniqueness of a Jordan Form	250
11.4 The Jordan Canonical Form	255
11.5 Differential Equations and the Jordan Canonical Form	256
11.6 Convergent Matrices	259
11.7 Power Bounded and Markov Matrices	261
11.8 Similarity of a Matrix and its Transpose	265
11.9 The Invertible Jordan Blocks of AB and BA	266
11.10 Similarity of a Matrix and its Complex Conjugate	269
11.11 Problems	270
11.12 Notes	276
11.13 Some Important Concepts	278
12 Normal Matrices and the Spectral Theorem	279
12.1 Normal Matrices	279
12.2 The Spectral Theorem	282
12.3 The Defect from Normality	285
12.4 The Fuglede–Putnam Theorem	286
12.5 Circulant Matrices	287
12.6 Some Special Classes of Normal Matrices	289
12.7 Similarity of Normal and Other Diagonalizable Matrices	292
12.8 Some Characterizations of Normality	293
12.9 Spectral Resolutions	294
12.10 Problems	298
12.11 Notes	302
12.12 Some Important Concepts	302
13 Positive Semidefinite Matrices	304
13.1 Positive Semidefinite Matrices	304
13.2 The Square Root of a Positive Semidefinite Matrix	311
13.3 The Cholesky Factorization	315
13.4 Simultaneous Diagonalization of Quadratic Forms	317
13.5 The Schur Product Theorem	319
13.6 Problems	322
13.7 Notes	326
13.8 Some Important Concepts	327
14 The Singular Value and Polar Decompositions	328
14.1 The Singular Value Decomposition	328
14.2 The Compact Singular Value Decomposition	332
14.3 The Polar Decomposition	336
14.4 Problems	341
14.5 Notes	344
14.6 Some Important Concepts	344

15 Singular Values and the Spectral Norm	345
15.1 Singular Values and Approximations	345
15.2 The Spectral Norm	347
15.3 Singular Values and Eigenvalues	350
15.4 An Upper Bound for the Spectral Norm	354
15.5 The Pseudoinverse	356
15.6 The Spectral Condition Number	359
15.7 Complex Symmetric Matrices	363
15.8 Idempotent Matrices	365
15.9 Problems	366
15.10 Notes	371
15.11 Some Important Concepts	371
16 Interlacing and Inertia	372
16.1 The Rayleigh Quotient	372
16.2 Eigenvalue Interlacing for Sums of Hermitian Matrices	374
16.3 Eigenvalue Interlacing for Bordered Hermitian Matrices	377
16.4 Sylvester's Criterion	381
16.5 Diagonal Entries and Eigenvalues of Hermitian Matrices	382
16.6 *Congruence and Inertia of Hermitian Matrices	383
16.7 Weyl's Inequalities	386
16.8 *Congruence and Inertia of Normal Matrices	388
16.9 Problems	391
16.10 Notes	396
16.11 Some Important Concepts	397
<i>Appendix A Complex Numbers</i>	398
A.1 The Complex Number System	398
A.2 Modulus, Argument, and Conjugation	401
A.3 Polar Form of a Complex Number	405
A.4 Problems	408
<i>References</i>	410
<i>Index</i>	411
