Notation	page xii
Preface	xiii
<b>PART I OVERVIEW OF OPTIMIZATION: APPLICATIONS AND PROBLEM FORMULATIONS</b>	<b>I</b>
<b>I Introduction to Optimization</b>	<b>3</b>
1.1 Statement of General Mathematical Programming (MP) (Optimization) Problem	3
1.2 Applications in Technological and Scientific Problems	6
1.3 Algorithms and Complexity	14
1.4 Generalized Optimization Problems	20
1.5 Chapter Summary	25
1.6 References	25
1.7 Further Reading Recommendations	26
<b>PART II FROM GENERAL MATHEMATICAL BACKGROUND TO GENERAL NONLINEAR PROGRAMMING PROBLEMS (NLP)</b>	<b>29</b>
<b>2 General Concepts</b>	<b>31</b>
2.1 “Size of Vectors”	31
2.2 Minimization versus Maximization	32
2.3 Types of Extrema of a Function (Stationary Points)	32
2.4 Contours of $f(x)$	33
2.5 Vectors, and Derivatives Involving Matrices and Vectors	34
2.6 Further Reading Recommendations	37
<b>3 Convexity</b>	<b>38</b>
3.1 Definition of Convex Function	38
3.2 Convex Sets	41
3.3 Further Reading Recommendations	42
3.4 Exercises	42

**Contents**

<b>4</b>	<b>Quadratic Functions</b>	44
4.1	Construction of the Matrix Form of a Quadratic Function by Example	44
4.2	Eigenvalues of $Q$ for Quadratic Functions and Convexity	45
4.3	Geometrical Interpretation of Eigenvalues and Eigenvectors	49
4.4	Solution of an Unconstrained Quadratic Program (QP)	50
4.5	Least Squares Fitting and Its Relation to QP	51
4.6	Further Reading Recommendations	56
4.7	Exercises	56
<b>5</b>	<b>Minimization in One Dimension</b>	57
5.1	Bisection	57
5.2	Golden Section Search	57
5.3	Newton's Method	60
5.4	Other Methods	61
5.5	Further Reading Recommendations	61
5.6	Exercises	62
<b>6</b>	<b>Unconstrained Multivariate Gradient-Based Minimization</b>	63
6.1	Minimum Stationary Points	63
6.2	Calculating Derivatives	64
6.3	The Steepest Descent Method	66
6.4	Newton's Method	67
6.5	Rate of Convergence	69
6.6	The Newton Family of Methods	72
6.7	Optimization Termination Criteria	73
6.8	Linesearch Methods	74
6.9	Summary of the Chapter	77
6.10	References	77
6.11	Exercises	77
<b>7</b>	<b>Constrained Nonlinear Programming Problems (NLP)</b>	81
7.1	Convexity of Constraint Set	81
7.2	Convex Programming Problem	81
7.3	Lagrange Multipliers	82
7.4	Necessary Conditions of Optimality (KKT Conditions)	85
7.5	Sufficient Conditions	85
7.6	Discussion and Solution Procedures	87
7.7	References	88
7.8	Further Reading Recommendations	88
7.9	Exercises	89
<b>8</b>	<b>Penalty and Barrier Function Methods</b>	91
8.1	Penalty Functions	91
8.2	Barrier Methods: Logarithmic Barriers	94
8.3	Penalty-Multiplier Method (Augmented Lagrangian Method)	96
8.4	Further Reading Recommendations	99
8.5	Exercises	99
<b>9</b>	<b>Interior Point Methods (IPM's): A Detailed Analysis</b>	101
9.1	NLP Formulations and Lagrangians	101
9.2	Logarithmic Barrier Functions for Inequality Constrained NLPs	102

**Contents**

9.3	Reformulating NLP Problems into Canonical Form	105
9.4	Newton's Method for NLP with Equality Constraints Only	106
9.5	Logarithmic Barriers for NLPs with Equalities and Bounds	107
9.6	Summary of Interior Point Methods	111
9.7	References	112
9.8	Further Reading Recommendations	112
<b>PART III FORMULATION AND SOLUTION OF LINEAR PROGRAMMING (LP) PROBLEMS</b>		<b>113</b>
<b>10</b>	<b>Introduction to LP Models</b>	<b>115</b>
10.1	General LP Problem Model	115
10.2	Geometrical Solution and Interpretation of LP Problems	116
10.3	Further Reading Recommendations	122
<b>11</b>	<b>Numerical Solution of LP Problems Using the Simplex Method</b>	<b>123</b>
11.1	Introduction	123
11.2	Rectangular Systems of Linear Equations	123
11.3	Rectangular Systems and the Objective Function of the LP Problem	125
11.4	The Simplex Method	126
11.5	Revisiting the Use of Artificial Variables for an Initial Basic Solution	128
11.6	Numerical Examples of the Simplex Method	128
11.7	References	130
11.8	Further Reading Recommendations	130
11.9	Exercises	131
<b>12</b>	<b>A Sampler of LP Problem Formulations</b>	<b>133</b>
12.1	Product Mix Problem	133
12.2	Diet Problem	134
12.3	Blending Problem	135
12.4	Transportation Problem	136
12.5	Linear ODE Optimal Control Problem (OCP)	138
12.6	Further Reading Recommendations	143
12.7	Exercises	144
<b>13</b>	<b>Regression Revisited: Using LP to Fit Linear Models</b>	<b>146</b>
13.1	$l_2$ / Euclidean Norm Fitting (Least Squares)	146
13.2	$l_1$ Norm Fitting	147
13.3	$l_\infty$ Norm Fitting	148
13.4	Application: Antoine Vapor Pressure Correlation Fitting	148
13.5	Further Reading Recommendations	150
<b>14</b>	<b>Network Flow Problems</b>	<b>151</b>
14.1	Network, Arcs, Graphs	151
14.2	Minimum Cost Network Flow Problem	152
14.3	Integrality of Solution Theorem	153
14.4	Capacitated Minimum Cost Network Flow Problem	154
14.5	Shortest Path (or Minimum Distance) Problem	154
14.6	Transportation Problem	155
14.7	Transshipment Problem	157

**Contents**

14.8	The Assignment Problem	158
14.9	References	159
14.10	Further Reading Recommendations	159
14.11	Exercises	159
<b>15</b>	<b>LP and Sensitivity Analysis, in Brief</b>	<b>161</b>
15.1	The Value of Lagrange Multipliers	161
15.2	Lagrange Multipliers in LP	161
15.3	Example of Sensitivity Analysis	163
15.4	Summary of Chapter	166
15.5	Further Reading Recommendations	167
<b>16</b>	<b>Multiobjective Optimization</b>	<b>168</b>
16.1	Problem Statement	168
16.2	Pareto Optimality Theory	170
16.3	Solution Procedures Generating Pareto Points	173
16.4	Pareto Solution Sets	185
16.5	Conclusions and further reading	189
16.6	Problems	190
16.7	References	191
16.8	Further Reading	193
<b>17</b>	<b>Optimization under Uncertainty</b>	<b>195</b>
17.1	Introduction	195
17.2	Different Approaches to Address Optimization Under Uncertainty	197
17.3	Robust Optimization	203
17.4	Sample Average Approximation Method	205
17.5	Scenario Generation and Sampling Methods	208
17.6	Sampling Methods for Scenario Generation	212
17.7	Solutions on Average Approximation Algorithm	218
17.8	Flexibility Analysis of Chemical Processes	218
17.9	References	224
17.10	Further Reading Recommendations	225
17.11	Exercises	226
<b>18</b>	<b>Mixed-Integer Programming Problems</b>	<b>228</b>
18.1	Preliminaries to Solving Mixed-Integer Programming Problems	229
18.2	Solution Techniques for Mixed-Integer Linear Programming Problems (MILP)	233
18.3	Solution Techniques for MINLP Problems	244
18.4	References	258
18.5	Further Reading Recommendations	259
18.6	Exercises	260
<b>19</b>	<b>Global Optimization</b>	<b>261</b>
19.1	Introduction	261
19.2	Problem Statement	262
19.3	Reducing the Domain for a Branch and Reduce Approach	267
19.4	Underestimators	273
19.5	Tunneling	280

**Contents**

19.6	Pseudocode for a Global Optimization Algorithm	282
19.7	References	283
19.8	Further Reading Recommendations	284
19.9	Exercises	285
<b>20</b>	<b>Optimal Control Problems (Dynamic Optimization)</b>	<b>287</b>
20.1	Problem Statement, Single-Stage and Multistage Problems	287
20.2	Pontryagin's Minimum (Maximum) to Solve Single-Stage Dynamics	292
20.3	Transcription to NLP Problems via Discretization	296
20.4	Control and State Parameterization via Orthogonal Collocation	304
20.5	References	310
20.6	Further Reading Recommendations	311
20.7	Exercises	311
<b>21</b>	<b>System Identification and Model Predictive Control</b>	<b>312</b>
21.1	Introduction	312
21.2	Dynamical Systems	313
21.3	Introduction to System Identification	319
21.4	Introduction to Model Predictive Control (MPC)	326
21.5	Discussion on the Impact of Optimization Algorithms on Identification and MPC	332
21.6	References	332
21.7	Exercises	334
	Index	336
