1 Introduction	1
PART I PRELIMINARIES AND SOME SIMPLER APPLICATIONS OF THE FOURIER TRANSFORM	
2 Measure theoretic preliminaries	11
2.1 Some basic notation	11
2.2 Borel and Hausdorff measures	12
2.3 Minkowski and packing dimensions	15
2.4 Weak convergence	16
2.5 Energy-integrals and Frostman's lemma	17
2.6 Differentiation of measures	20
2.7 Interpolation	21
2.8 Khintchine's inequality	22
2.9 Further comments	24
3 Fourier transforms	26
3.1 Fourier transforms in L^1 and L^2	26
3.2 Fourier transforms of measures and distributions	30
3.3 The Fourier transform of radial functions, Bessel functions	32
3.4 The Fourier transform of Riesz kernels	35
3.5 Fourier transforms and energy-integrals of measures	38
3.6 Salem sets and Fourier dimension	40
3.7 Spherical averages	43

3.8	Ball averages	44
3.9	Fourier transforms and rectangular boxes	46
3.10	Fourier series	50
3.11	Further comments	53
4	Hausdorff dimension of projections and distance sets	55
4.1	Projections	55
4.2	Distance sets	58
4.3	Dimension of Borel rings	64
4.4	Further comments	66
5	Exceptional projections and Sobolev dimension	72
5.1	Exceptional sets for one-dimensional projections	72
5.2	Sobolev dimension	73
5.3	Higher dimensional projections	78
5.4	Further comments	84
6	Slices of measures and intersections with planes	88
6.1	Sliced measures and estimates for energy-integrals	88
6.2	Dimension of plane sections	93
6.3	Measures on graphs	96
6.4	Further comments	96
7	Intersections of general sets and measures	100
7.1	Intersection measures and energy estimates	100
7.2	Dimension of intersections of sets	104
7.3	Further comments	105
PART II SPECIFIC CONSTRUCTIONS		
8	Cantor measures	109
8.1	Symmetric Cantor sets C_d and measures μ_d	109
8.2	Pisot numbers and the corresponding measures	113
8.3	Self-similar measures	117
8.4	Further comments	119
9	Bernoulli convolutions	120
9.1	Absolute continuity of the Bernoulli convolutions	120
9.2	Further comments	125
10	Projections of the four-corner Cantor set	127
10.1	The Cantor sets $C(d)$	127

Contents

ix

10.2	Peres–Simon–Solomyak proof for the projections of $C(1/4)$	128
10.3	Kenyon’s tilings and projections of $C(1/4)$	131
10.4	Average length of projections	139
10.5	Further comments	140
11	Besicovitch sets	143
11.1	Existence of Besicovitch sets	143
11.2	Hausdorff dimension of Besicovitch sets	144
11.3	Nikodym sets	147
11.4	Lines vs. line segments	150
11.5	Furstenberg sets	152
11.6	Further comments	153
12	Brownian motion	158
12.1	Some facts on Brownian motion	158
12.2	Dimension of trajectories	159
12.3	Further comments	162
13	Riesz products	163
13.1	Definition of Riesz products	163
13.2	Absolute continuity of Riesz products	165
13.3	Riesz products and Hausdorff dimension	166
13.4	Uniformly locally uniform measures	168
13.5	Further comments	172
14	Oscillatory integrals (stationary phase) and surface measures	174
14.1	One-dimensional case	174
14.2	Higher dimensional case	177
14.3	Surface measures	180
14.4	Further comments	181
PART III DEEPER APPLICATIONS OF THE FOURIER TRANSFORM		
15	Spherical averages and distance sets	185
15.1	The Wolff–Erdoğan distance set theorem	185
15.2	Spherical averages and distance measures	186
15.3	The decay of spherical averages	191
15.4	Distance sets in finite fields	197
15.5	Further comments	198

16	Proof of the Wolff–Erdogan Theorem	201
	16.1 Further comments	218
17	Sobolev spaces, Schrödinger equation and spherical averages	219
	17.1 Sobolev spaces and the Hardy–Littlewood maximal function	219
	17.2 Schrödinger equation and related integral operators	224
	17.3 Further comments	234
18	Generalized projections of Peres and Schlag	236
	18.1 Transversality of degree 0 in the one-dimensional case	236
	18.2 Transversality of degree β	252
	18.3 Generalized projections in higher dimensions	255
	18.4 Applications	259
	18.5 Further comments	264
PART IV FOURIER RESTRICTION AND KAKEYA TYPE PROBLEMS		
19	Restriction problems	269
	19.1 The problem	269
	19.2 Stein–Tomas restriction theorem	271
	19.3 Restriction conjecture	275
	19.4 Applications to PDEs	280
	19.5 Further comments	281
20	Stationary phase and restriction	283
	20.1 Stationary phase and L^2 estimates	283
	20.2 From stationary phase to restriction	286
	20.3 Sharp results in the plane	288
	20.4 Further comments	292
21	Fourier multipliers	293
	21.1 Definition and examples	293
	21.2 Fefferman’s example	295
	21.3 Bochner–Riesz multipliers	300
	21.4 Almost everywhere convergence and tube null sets	303
	21.5 Further comments	304
22	Keakeya problems	305
	22.1 Keakeya maximal function	305
	22.2 Keakeya maximal implies Keakeya	314

<i>Contents</i>		xi
22.3	Restriction implies <i>Keakeya</i>	318
22.4	<i>Nikodym</i> maximal function	321
22.5	Summary of conjectures	323
22.6	<i>Keakeya</i> problems in finite fields	325
22.7	Further comments	327
23	Dimension of Besicovitch sets and <i>Keakeya</i> maximal inequalities	329
23.1	Bourgain's bushes and lower bound $(n + 1)/2$	329
23.2	Wolff's hairbrushes and lower bound $(n + 2)/2$	332
23.3	Bourgain's arithmetic method and lower bound $cn + 1 - c$	344
23.4	Further comments	353
24	(n, k) Besicovitch sets	357
24.1	Marstrand and the case $n = 3, k = 2$	357
24.2	Falconer and the case $k > n/2$	359
24.3	Bourgain and the case $k > (n + 1)/3$	361
24.4	Further comments	365
25	Bilinear restriction	369
25.1	Bilinear vs. linear restriction	369
25.2	Setting for the bilinear restriction theorem	371
25.3	Bilinear restriction theorems	372
25.4	Bilinear restriction implies restriction	375
25.5	Localization	378
25.6	Induction on scales	386
25.7	Sketch of the proof of Theorem 25.7	387
25.8	Extension operators	390
25.9	Wavepacket decomposition	391
25.10	Some pigeonholing	399
25.11	Reduction to $L^2(\mathbb{R}^n)$	403
25.12	Geometric arguments	406
25.13	Multilinear restriction and applications	413
25.14	Further comments	414
