<i>Preface</i>	<i>page xi</i>
<i>Notation</i>	xiv
1 Preliminaries	1
1.1 Measure and integral	1
1.2 Poisson integrals	8
1.3 Hilbert spaces and their operators	22
1.4 Notes	31
2 Inner functions	32
2.1 Disk automorphisms	32
2.2 Bounded analytic functions	33
2.3 Inner functions	36
2.4 Unimodular boundary limits	42
2.5 Angular derivatives	46
2.6 Frostman's Theorem	52
2.7 Notes	55
3 Hardy spaces	58
3.1 Three approaches to the Hardy space	58
3.2 The Riesz projection	66
3.3 Factorization	67
3.4 A growth estimate	73
3.5 Associated classes of functions	74
3.6 Notes	78
3.7 For further exploration	81

4	Operators on the Hardy space	83
4.1	The shift operator	83
4.2	Toeplitz operators	90
4.3	A characterization of Toeplitz operators	93
4.4	The commutant of the shift	96
4.5	The backward shift	99
4.6	Difference quotient operator	100
4.7	Notes	102
4.8	For further exploration	102
5	Model spaces	104
5.1	Model spaces as invariant subspaces	104
5.2	Stability under conjugate analytic Toeplitz operators	106
5.3	Containment and lattice operations	108
5.4	A decomposition for \mathcal{K}_u	109
5.5	Reproducing kernels	111
5.6	The projection P_u	112
5.7	Finite-dimensional model spaces	115
5.8	Density results	118
5.9	Takenaka–Malmquist–Walsh bases	120
5.10	Notes	121
5.11	For further exploration	124
6	Operators between model spaces	126
6.1	Littlewood Subordination Principle	126
6.2	Composition operators on model spaces	129
6.3	Unitary maps between model spaces	134
6.4	Multipliers of \mathcal{K}_u	137
6.5	Multipliers between two model spaces	139
6.6	Notes	141
6.7	For further exploration	142
7	Boundary behavior	144
7.1	Pseudocontinuation	144
7.2	Cyclicity via pseudocontinuation	151
7.3	Analytic continuation	152
7.4	Boundary limits	158
7.5	Notes	167
8	Conjugation	170
8.1	Abstract conjugations	170
8.2	Conjugation on \mathcal{K}_u	173

Contents	ix
8.3 Inner functions in \mathcal{K}_u	177
8.4 Generators of \mathcal{K}_u	178
8.5 Cartesian decomposition	180
8.6 2×2 inner functions	182
8.7 Notes	185
9 The compressed shift	187
9.1 What is a compression?	187
9.2 The compressed shift	189
9.3 Invariant subspaces and cyclic vectors	193
9.4 The Sz.-Nagy–Foiş model	195
9.5 Functional calculus for S_u	197
9.6 The spectrum of S_u	201
9.7 The C^* -algebra generated by S_u	206
9.8 Notes	212
9.9 For further exploration	213
10 The commutant lifting theorem	215
10.1 Minimal isometric dilations	216
10.2 Existence and uniqueness	217
10.3 Strong convergence	222
10.4 An associated partial isometry	223
10.5 The commutant lifting theorem	224
10.6 The characterization of $\{S_u\}'$	229
10.7 Notes	230
11 Clark measures	231
11.1 The family of Clark measures	231
11.2 The Clark unitary operators	235
11.3 Spectral representation of the Clark operator	239
11.4 The Aleksandrov disintegration theorem	245
11.5 A connection to composition operators	247
11.6 Carleson measures	250
11.7 Isometric embeddings	251
11.8 Notes	256
11.9 For further exploration	258
12 Riesz bases	260
12.1 Minimal sequences	260
12.2 Uniformly minimal sequences	263
12.3 Uniformly separated sequences	265
12.4 The mappings Λ , V , and Γ	268

12.5	Abstract Riesz sequences	271
12.6	Riesz sequences in \mathcal{K}_B	276
12.7	Completeness problems	277
12.8	Notes	278
13	Truncated Toeplitz operators	282
13.1	The basics	282
13.2	A characterization	287
13.3	C -symmetric operators	291
13.4	The spectrum of A_φ^u	292
13.5	An operator disintegration formula	299
13.6	Norm of a truncated Toeplitz operator	300
13.7	Notes	301
13.8	For further exploration	305
	<i>References</i>	307
	<i>Index</i>	318
