PART 3 LAGRANGIAN INTERSECTION FLOER HOMOLOGY	
12 Floer homology on cotangent bundles	3
12.1 The action functional as a generating function	4
12.2 L^2 -gradient flow of the action functional	7
12.3 C^0 bounds of Floer trajectories	11
12.4 Floer-regular parameters	15
12.5 Floer homology of submanifold $S \subset N$	16
12.6 Lagrangian spectral invariants	23
12.7 Deformation of Floer equations	33
12.8 The wave front and the basic phase function	36
13 The off-shell framework of a Floer complex with bubbles	41
13.1 Lagrangian subspaces versus totally real subspaces	41
13.2 The bundle pair and its Maslov index	43
13.3 Maslov indices of polygonal maps	47
13.4 Novikov covering and Novikov ring	50
13.5 Action functional	53
13.6 The Maslov–Morse index	55
13.7 Anchored Lagrangian submanifolds	57
13.8 Abstract Floer complex and its homology	60
13.9 Floer chain modules	64
14 On-shell analysis of Floer moduli spaces	73
14.1 Exponential decay	73
14.2 Splitting ends of $\mathcal{M}(x, y; B)$	82

14.3	Broken cusp-trajectory moduli spaces	93
14.4	Chain map moduli space and energy estimates	97
15	Off-shell analysis of the Floer moduli space	109
15.1	Off-shell framework of smooth Floer moduli spaces	109
15.2	Off-shell description of the cusp-trajectory spaces	115
15.3	Index calculation	119
15.4	Orientation of the moduli space of disc instantons	122
15.5	Gluing of Floer moduli spaces	127
15.6	Coherent orientations of Floer moduli spaces	140
16	Floer homology of monotone Lagrangian submanifolds	150
16.1	Primary obstruction and holomorphic discs	150
16.2	Examples of monotone Lagrangian submanifolds	156
16.3	The one-point open Gromov–Witten invariant	161
16.4	The anomaly of the Floer boundary operator	166
16.5	Product structure; triangle product	176
17	Applications to symplectic topology	182
17.1	Nearby Lagrangian pairs: thick–thin dichotomy	183
17.2	Local Floer homology	188
17.3	Construction of the spectral sequence	194
17.4	Biran and Cieliebak’s theorem	202
17.5	Audin’s question for monotone Lagrangian submanifolds	208
17.6	Polterovich’s theorem on $\text{Ham}(S^2)$	211
PART 4 HAMILTONIAN FIXED-POINT FLOER HOMOLOGY		
18	The action functional and the Conley–Zehnder index	219
18.1	Free loop space and its S^1 action	220
18.2	The free loop space of a symplectic manifold	221
18.3	Perturbed action functionals and their action spectrum	228
18.4	The Conley–Zehnder index of $[z, w]$	233
18.5	The Hamiltonian-perturbed Cauchy–Riemann equation	240
19	Hamiltonian Floer homology	244
19.1	Novikov Floer chains and the Novikov ring	244
19.2	Definition of the Floer boundary map	248
19.3	Definition of a Floer chain map	254
19.4	Construction of a chain homotopy map	256
19.5	The composition law of Floer chain maps	258

vii

19.6	Transversality	261
19.7	Time-reversal flow and duality	268
19.8	The Floer complex of a small Morse function	278
20	The pants product and quantum cohomology	281
20.1	The structure of a quantum cohomology ring	282
20.2	Hamiltonian fibrations with prescribed monodromy	289
20.3	The PSS map and its isomorphism property	299
20.4	Frobenius pairing and duality	312
21	Spectral invariants: construction	314
21.1	Energy estimates and Hofer's geometry	315
21.2	The boundary depth of the Hamiltonian H	322
21.3	Definition of spectral invariants and their axioms	324
21.4	Proof of the triangle inequality	332
21.5	The spectrality axiom	337
21.6	Homotopy invariance	342
22	Spectral invariants: applications	348
22.1	The spectral norm of Hamiltonian diffeomorphisms	349
22.2	Hofer's geodesics and periodic orbits	352
22.3	Spectral capacities and sharp energy–capacity inequality	366
22.4	Entov and Polterovich's partial symplectic quasi-states	372
22.5	Entov and Polterovich's Calabi quasimorphism	381
22.6	Back to topological Hamiltonian dynamics	397
22.7	Wild area-preserving homeomorphisms on D^2	403
<i>Appendix A</i>	The Weitzenböck formula for vector-valued forms	408
<i>Appendix B</i>	The three-interval method of exponential estimates	412
<i>Appendix C</i>	The Maslov index, the Conley–Zehnder index and the index formula	417
	<i>References</i>	429
	<i>Index</i>	444

<i>Preface</i>	xiii
PART 1 HAMILTONIAN DYNAMICS AND SYMPLECTIC GEOMETRY	
1 The least action principle and Hamiltonian mechanics	3
1.1 The Lagrangian action functional and its first variation	3
1.2 Hamilton's action principle	7
1.3 The Legendre transform	8
1.4 Classical Poisson brackets	18
2 Symplectic manifolds and Hamilton's equation	21
2.1 The cotangent bundle	21
2.2 Symplectic forms and Darboux' theorem	24
2.3 The Hamiltonian diffeomorphism group	37
2.4 Banyaga's theorem and the flux homomorphism	45
2.5 Calabi homomorphisms on open manifolds	52
3 Lagrangian submanifolds	60
3.1 The conormal bundles	60
3.2 Symplectic linear algebra	62
3.3 The Darboux–Weinstein theorem	71
3.4 Exact Lagrangian submanifolds	74
3.5 Classical deformations of Lagrangian submanifolds	77
3.6 Exact Lagrangian isotopy = Hamiltonian isotopy	82
3.7 Construction of Lagrangian submanifolds	87
3.8 The canonical relation and the natural boundary condition	96
3.9 Generating functions and Viterbo invariants	99

Cambridge University Press

x

Contents of Volume 1

4	Symplectic fibrations	106
4.1	Symplectic fibrations and symplectic connections	106
4.2	Hamiltonian fibration	110
4.3	Hamiltonian fibrations, connections and holonomies	120
5	Hofer's geometry of $\text{Ham}(M, \omega)$	130
5.1	Normalization of Hamiltonians	130
5.2	Invariant norms on $C^\infty(M)$ and the Hofer length	135
5.3	The Hofer topology of $\text{Ham}(M, \omega)$	137
5.4	Nondegeneracy and symplectic displacement energy	139
5.5	Hofer's geodesics on $\text{Ham}(M, \omega)$	143
6	C^0-Symplectic topology and Hamiltonian dynamics	146
6.1	C^0 symplectic rigidity theorem	146
6.2	Topological Hamiltonian flows and Hamiltonians	158
6.3	Uniqueness of the topological Hamiltonian and its flow	163
6.4	The homeomorphism group	171
PART 2 RUDIMENTS OF PSEUDOHOLOMORPHIC CURVES		
7	Geometric calculations	177
7.1	Natural connection on almost-Kähler manifolds	177
7.2	Global properties of J -holomorphic curves	185
7.3	Calculations of $\Delta e(u)$ on shell	189
7.4	Boundary conditions	193
8	Local study of J-holomorphic curves	197
8.1	Interior a-priori estimates	197
8.2	Off-shell elliptic estimates	202
8.3	Removing boundary contributions	209
8.4	Proof of ϵ -regularity and density estimates	212
8.5	Boundary regularity of weakly J -holomorphic maps	221
8.6	The removable singularity theorem	227
8.7	Isoperimetric inequality and the monotonicity formula	235
8.8	The similarity principle and the local structure of the image	239
9	Gromov compactification and stable maps	247
9.1	The moduli space of pseudoholomorphic curves	247
9.2	Sachs–Uhlenbeck rescaling and bubbling	251
9.3	Definition of stable curves	257
9.4	Deformations of stable curves	267
9.5	Stable map and stable map topology	291

xi

10 Fredholm theory	323
10.1 A quick review of Banach manifolds	323
10.2 Off-shell description of the moduli space	328
10.3 Linearizations of $\bar{\partial}_{(j,\nu)}$	332
10.4 Mapping transversality and linearization of $\bar{\partial}$	335
10.5 Evaluation transversality	345
10.6 The problem of negative multiple covers	353
11 Applications to symplectic topology	355
11.1 Gromov's non-squeezing theorem	356
11.2 Nondegeneracy of the Hofer norm	364
<i>References</i>	377
<i>Index</i>	392
