Preface

page xiii

Part I Light and Fluids

1	From Max Planck to Machine Learning	3
1.1	Introduction: Light and Complexity	3
1.2	Statistical Mechanics versus Photonics: Which Came First?	5
1.3	Stimulated Emission Is Negligible at Equilibrium	7
1.4	Lasers: The Gould Design	10
1.5	The Maiman Laser: Negative Temperature or Nonequilibrium?	11
1.6	Lasers and Heat Engines	13
1.7	What Determines the Effective Temperature? Lasing as a Phase Transition	18
1.8	Lasers: The Letokhov Design	20
1.9	Laser Thermodynamics: The Era of Mode-Locking	23
1.10	The Link with Complexity and Spin Glass Theory	26
1.11	Replica Symmetry Breaking	27
1.12	The Observation of Replica Symmetry Breaking	29
1.13	“Physics Has Crossed Boundaries”: The Physics of Artificial Intelligence and Optical Computing	31
2	Elements of Linear Optics	34
2.1	Introduction: Optics and the Fourier Transform	34
2.2	The Scalar Wave Equation	34
2.3	Propagator and Spherical Waves	36
2.4	Fresnel Optics and Far Field	37
2.5	Thin Lenses Approximate the Far Field	38
2.6	Imaging by a Thin Lens	39
2.7	Thin Lenses and the Fourier Transform	41
2.8	Paraxial Wave Equation	42
2.9	Further Reading	43
2.10	Appendix: Fourier Transforms	43
3	Green's Functions	48
3.1	Introduction: From Waves to Modes	48
3.2	Helmholtz Equation	48

3.3	Scalar Green's Function with Small Absorption	50
3.4	Scalar Green's Function and Density of States	51
3.5	Green's Functions and Dirac Notation	53
3.6	Green's Function for Vector Fields	54
3.7	The Propagator and Dyson equation	59
3.8	Complements	61
3.9	Further Reading	65
4	Rays	66
4.1	Introduction: From Waves to Particles	66
4.2	Eikonal for the Schrödinger Equation	67
4.3	Hamilton Equations for Photons	68
4.4	Liouville Equation	71
4.5	Eikonal for Maxwell Equations	76
4.6	Further Reading	78
5	Photon Fluid Transport	79
5.1	Introduction: Wave-Particle Transport	79
5.2	Transport in Position Angle	80
5.3	Transport in Position–Momentum	82
5.4	Interaction of the Photon Fluid with Matter	83
5.5	Transport Equation for the Radiance	86
5.6	Transport Equation for the Photon Distribution	88
5.7	From Photon Distribution to the Radiance	89
5.8	RTE by Energy Conservation	90
5.9	RTE by Multiscale Wigner Transform	93
5.10	Further Reading	95
6	Light Diffusion	96
6.1	Introduction: From Transport to Diffusion	96
6.2	Photon Density and Equilibrium	96
6.3	The Photon Current	98
6.4	Photon Fick's Law	101
6.5	Diffusion Equation	102
6.6	Boundary Conditions	104
6.7	Point Source and Diffusion Length	105
6.8	Modal Expansion	106
6.9	Dynamic Light Diffusion	107
6.10	Diffusion Equation from Transport Theory	108
6.11	Further Reading	110
7	Diffusive Random Lasers	111
7.1	Introduction: The Photon Bomb	111
7.2	The Diffusive Laser Threshold	112
7.3	Rate Equations	118
7.4	Further Reading	121

Part II Photonic Spin Glasses

8 Spin Glass Theory and Replica Symmetry Breaking	125
8.1 Introduction: Breaking Diffusion	125
8.2 Spins and Couplings	127
8.3 Free Energy, Temperature, and Landscape	129
8.4 The Ising Model	131
8.5 The Edwards–Anderson Model	135
8.6 Replicas	137
8.7 Replica Symmetry and Phase Diagram	139
8.8 Replica Symmetry Breaking	143
8.9 Further Reading	147
9 Modes and Fluctuations in Lasers	148
9.1 Introduction: Modes and Equilibrium	148
9.2 Modes of the Universe	149
9.3 Coupled Mode Theory	151
9.4 Linear Loss	153
9.5 Thermal Fluctuations	154
9.6 Gain, Saturation, and Threshold	157
9.7 Equilibrium with Gain and Spontaneous Emission	158
9.8 Radiative Loss and Linear Interaction	159
9.9 Nonlinear Interaction	160
9.10 Phase Locking	163
9.11 Further Reading	165
10 Photonic Spin Glass	166
10.1 Introduction: Optical Complexity	166
10.2 Heuristics on the Multimode Hamiltonian	167
10.3 Spontaneous Emission and Effective Temperature	169
10.4 The Amplitude and Phase Systems	170
10.5 Entropy and Probability Distribution	172
10.6 Mean Field for the Phase System	174
10.7 Mapping to the SK with Mode Pairs	175
10.8 The Photonic Random Energy Model	177
10.9 REM Phase Diagram	188
10.10 Further Reading	195
11 Photonic Spin Glass Theory	197
11.1 Introduction: The Optical SK Model	197
11.2 SK Spin Glass with Replica Symmetry	197
11.3 Replica Symmetry Breaking	210
11.4 Further Reading	228
12 Photonic Spin Glass Experiments	230
12.1 Introduction: From Mathematical Models to Experimental Verification	230

12.2	Why Disorder Favors Phase Locking and the Glassy Behavior of Light	231
12.3	Fluctuations in the Spectra	232
12.4	The Measurable Order Parameters	236
12.5	The Absence of RSB in Single-Mode Lasers	238
12.6	The Absence of RSB in Free Running	241
12.7	The Overlap in a Random Laser with RSB	243
12.8	Further Reading	250

Part III Optical Ising Machines

13	Focusing in Random Media and Transmission Matrices	255
13.1	Introduction: Computing with Structured Light	255
13.2	Focusing in Random Media	256
13.3	The Transfer Matrix	267
13.4	Measuring the Transmission Matrix	270
13.5	Further Reading	277
14	The Spatial Ising Machine	278
14.1	Introduction: Frustration Interference	278
14.2	The Simplest SPIM	279
14.3	Experimental Setup	281
14.4	Number Partitioning and Performance	285
14.5	The SPIM Mattis Hamiltonian	286
14.6	Adiabatic Evolution and Annealing	287
14.7	A Fully Connected SK Model	293
14.8	Replica Symmetry Breaking	295
14.9	The SPIM and XY Models by Optical Vector-Matrix Multiplication	298
14.10	Gauged SPIM	299
14.11	Phase-Only Programmable SPIM	303
14.12	Further Reading	305
15	The Parametron and the Coherent Ising Machine	306
15.1	Introduction: A Reborn Computing Machine	306
15.2	The Parametric Oscillator and the Parametron	307
15.3	The Optical Parametric Amplifier and Oscillator	311
15.4	Optical Parametric Oscillator Cavity Map	316
15.5	Optical Parametron as Gradient Descent	316
15.6	The Coherent Ising Machine	317
15.7	A Numerical Example	320
15.8	Time-Multiplexed Coherent Ising Machine	322
15.9	Spin Glass Physics with the CIM	326
15.10	Further Reading	326
