	<i>Preface</i>	page vii
	<i>Glossary of Selected Symbols</i>	ix
1	Introduction	1
	1.1 Motivation	1
	1.2 Organization	6
	1.3 Notation	8
2	Smoothness	12
	2.1 Ridge Function Smoothness	12
	2.2 Smoothness in the Multivariate Setting	15
3	Uniqueness	19
	3.1 Ridge Function Uniqueness	19
	3.2 Uniqueness in the Multivariate Setting	24
4	Identifying Functions and Directions	28
	4.1 Known Directions	28
	4.2 Unknown Directions	30
	4.3 The Multivariate Setting	33
5	Polynomial Ridge Functions	36
	5.1 Homogeneous Polynomials	36
	5.2 Algebraic Polynomials	46
	5.3 Waring's Problem for Polynomials	48
	5.4 Generalized Ridge Polynomials	56
6	Density and Representation	60
	6.1 Density with Fixed Directions	60
	6.2 Generalized Ridge Function Density	64
	6.3 Density with Variable Directions	66
	6.4 Representation	69
	6.5 Ridgelet Density	73

vi	<i>Contents</i>	
7	Closure	77
	7.1 General Closure Results in L^p	78
	7.2 Counterexamples	80
	7.3 More General Closure Results	85
	7.4 Closure in $C(K)$	87
8	Existence and Characterization of Best Approximations	90
	8.1 General Results	90
	8.2 $L^p(K)$, $p \in (1, \infty)$	92
	8.3 Examples	95
	8.4 $C(K)$	98
9	Approximation Algorithms	105
	9.1 Fixed Directions in Hilbert Space	106
	9.2 A Greedy-Type Algorithm	123
	9.3 Fixed Directions in Smooth Banach Spaces	130
	9.4 The Diliberto–Straus Algorithm	135
10	Integral Representations	141
	10.1 Gegenbauer Ridge Polynomials	142
	10.2 Ridgelets	147
11	Interpolation at Points	152
	11.1 General Results	153
	11.2 Closed Paths: $r = 2$	157
	11.3 Difference Commensurable Points	160
12	Interpolation on Lines	168
	12.1 Interpolation on a Set	169
	12.2 Interpolation from $\mathcal{M}(\mathbf{a})$	173
	12.3 Interpolation from $\mathcal{M}(\mathbf{a}^1, \mathbf{a}^2)$ on Two Straight Lines	174
	12.4 First-Order Difference Equations and Interpolation from $\mathcal{M}(\mathbf{a}^1, \mathbf{a}^2)$	186
	<i>References</i>	196
	<i>Supplemental References</i>	202
	<i>Author Index</i>	205
	<i>Subject Index</i>	207
