Preface	vii
Introduction	1
Chapter I Noncommutative projective geometry	13
Introduction	13
1 Review of basic background and the Diamond Lemma	14
2 Artin–Schelter regular algebras	30
3 Point modules	42
4 Noncommutative projective schemes	51
5 Classification of noncommutative curves and surfaces	62
Chapter II Deformations of algebras in noncommutative geometry	71
Introduction	71
1 Motivating examples	75
2 Formal deformation theory and Kontsevich’s theorem	104
3 Hochschild cohomology and infinitesimal deformations	124
4 Dglas, the Maurer–Cartan formalism, and proof of formality theorems	136
5 Calabi–Yau algebras and isolated hypersurface singularities	157
Chapter III Symplectic reflection algebras	167
Introduction	167
1 Symplectic reflection algebras	171
2 Rational Cherednik algebras at $t = 1$	184
3 The symmetric group	197
4 The KZ functor	211
5 Symplectic reflection algebras at $t = 0$	224
Chapter IV Noncommutative resolutions	239
Introduction	239
Acknowledgments	240
1 Motivation and first examples	240
2 NCCRs and uniqueness issues	250
3 From algebra to geometry: quiver GIT	261
4 Into derived categories	270
5 McKay and beyond	285
6 Appendix: Quiver representations	297
