

SEALS, CRAFT AND COMMUNITY IN BRONZE AGE CRETE

Generations of scholars have grappled with the origins of “palace” society on Minoan Crete, seeking to explain when and how life on the island altered monumentally. Emily S. K. Anderson turns light on the moment just before the palaces, recognizing it as a remarkably vibrant phase of sociocultural innovation. Exploring the role of craftspersons, travelers and powerful objects, she argues that social change resulted from creative work that forged connections at new scales and in novel ways. This study focuses on an extraordinary corpus of sealstones that have been excavated across Crete. Fashioned of imported ivory and engraved with images of dashing lions, these distinctive objects linked the identities of their distant owners. Anderson argues that it was the repeated but pioneering actions of such diverse figures, people and objects alike, that dramatically changed the shape of social life in the Aegean at the turn of the second millennium BCE.

Emily S. K. Anderson teaches in the Departments of Classics and History of Art at Johns Hopkins University, where her research primarily concerns the material and visual cultures of the Aegean and eastern Mediterranean Bronze Ages.

ACKNOWLEDGMENTS

THIS PROJECT, LIKE SO MANY OTHERS, HAS DEPARTED QUITE DECIDEDLY from the plans I carefully laid for it. Its unruliness is the fortunate result of many conversations over past years, with people who have generously lent not only their ear but more importantly their insights, impressions and criticisms, pulling my ideas in unexpected directions. Some of these conversations have been very long indeed, some are still ongoing. This all began while I was a graduate student at Yale, where Tom Tartaron shepherded my studies as a steadfast advisor, ever patient, inspiring and supportive – a model in every respect. Following a first summer excavating at Azoria, Donald Haggis became another essential mentor. How fortunate I was to be introduced to Cretan fieldwork by someone whose scholarship I respect so greatly (and from which I have learned so much). Like many others over the years studying Aegean glyptic, my road soon led to Germany. Over two long visits in 2006–7 and 2008, supported by fellowships from DAAD and PEO, I was able to immerse myself in the collections of the Corpus der minoischen und mykenischen Siegel (CMS). Ingo Pini and Walter Müller were the finest of hosts in Marburg, who shared insights born of their extraordinary experience with the glyptic, casually imparting incredible knowledge over the rim of a tea cup. At the same time they gave me an ideal space in which to return day-in and day-out to the microscope and casts of the seals, a blissful spot indeed. While a visiting student in Heidelberg I met Diamantis Panagiotopoulos, who quickly became an invaluable advisor and resource. Now, as the new director of the CMS, his support and generosity have taken on yet further dimensions. Also at the CMS is Maria Anastasiadou, who first welcomed me as a fellow student of Aegean glyptic in Marburg and almost immediately became a dear friend. Her deep knowledge of the glyptic material is remarkable, her wise guidance a gift to anyone consulting the CMS. Being in Greece, and in the presence of the seals themselves, has naturally been an irreplaceable and critical element of this project, generously supported by the Stavros Niarchos Foundation. The American School of Classical Studies at Athens provided a stimulating community of scholars and a home base during my time there as an Associate Member. It was then that I met Louise Hitchcock, whose interest and ideas have proved such an inspiration. My time in Athens was also enriched by the

treasured friendship of Hallie Franks and the many conversations (and laughs) we shared at 18 Effranoros. In Crete, I am indebted to the staff of the Heraklion Museum, whose kind assistance enabled me to spend a great deal of time with the seals. More recently, the director of the museum, Stella Mandalaki, has graciously facilitated my research by providing crucial material.

My research has benefited tremendously from the input and support of various archaeologists. Efi Sapouna-Sakellaraki's interest and generosity with material from Archanes has been an honor. Likewise, I am deeply grateful to Kostas Sbonias, Keith Branigan, Andonis Vasilakis and Krzysztof Nowicki, each of whom has incarnated an ideal of scholarly good will, kindly sharing the fruits of their work. Some of the best conversations I have had about Cretan seals have taken place largely in my head, but were far from one-sided. By this I mean that I am very fortunate to have worked in the company of exceptional scholarship concerning Aegean glyptic. Over the years I have developed the greatest respect and gratitude for the ideas of various scholars whose words I have poured over, deeply influencing how I think about seals. These include (and begin with) Friedrich Matz, who in many ways established the field. Others are Ingo Pini, Walter Müller, Judith Weingarten, John Younger, Paul Yule, Janice Crowley, Joan Aruz and Ilse Schoep. The research of Olga Krzyszkowska has been especially important to me, as she has done so much to further our understanding of the use of ivory in Bronze Age Aegean glyptic, not only its identification but also the peculiarities and nuances of its working. Likewise Kostas Sbonias' essential study of early Cretan glyptic has been a bedrock for my own analyses, for which I am deeply grateful. In recent years Maria Relaki has offered in my opinion some of the most stimulating and important ideas concerning early Crete, including early glyptic; it has been a true pleasure to grapple with some of her suggestions.

There are, of course, many others who have contributed to my work, in a variety of ways, not all of whom I will be able to name here. At Yale, Karen Polinger Foster was a crucial guiding force whose insights spanned the Aegean and Near East. I also learned a great deal from Richard Burger, Rod McIntosh, Marcello Canuto and Harvey Weiss. Daniel Pullen first ensnared me in the puzzle of Bronze Age Aegean archaeology while we drew sherds beneath olive trees in the Corinthia and dodged marauding sheep – I never looked back. I deeply value discussions with Bryan Burns and Brendan Burke, gathered around tables back in Dilesi after long field days. At Hopkins, Alan Shapiro has been an inspiring colleague and friend (our Homeric Archaeology course one of my favorite teaching experiences). From day one, Glenn Schwartz has welcomed my work and proven a source for ongoing and valuable discussion of myriad archaeological topics. The arrival of Marian Feldman has been a true gift. I could not ask for a more thought-provoking and generous lunchmate with whom to share discussion of the early eastern Mediterranean; our

discussions of this project have been invaluable. Sanchita Balachandran, Paul Delnero, Lisa DeLeonardis, Jake Lauinger, Sylvia Montiglio, Nino Zchomelidse and Herica Valladares, as well as the students I have taught and learned from, have made Hopkins a vibrant and stimulating environment in which to think about the ancient world, often in quite unexpected ways. At Cambridge University Press, Asya Graf has been a joy to work with, a true advocate of scholarly thinking. Isabella Vitti has provided kind and steadfast support in the one thousand (plus one) details. Beatrice Rehl and David Morris have proved infinitely capable and gracious guides bringing the project to completion. I also give my sincerest thanks to Anand Shanmugam and Julia TerMaat, for the work of their keen eyes and careful fingers. Beyond and before the academic arena, I have had the love, encouragement and education of many dear people. Friends and family over the years, Yukiko, Simone and Amy, with whom I have discussed all that is behind this, and much more. My mother and father, who never blinked when I said I wanted to dig holes for a living, and who have shaped so much of how I feel about the past (near and far). Elisha, who in fact led the first excavations in our backyard in Georgetown, and challenged me to see the riddle in everything. Most fully and deeply I am indebted to my boys, Leo and Camilo, each my heart and world, for the music they infuse in everything, so precious and unpredictable, an inspiration bringing color to each step forward.

★

Earlier versions of certain thoughts and discussions included in the present work have appeared elsewhere. Elements of my consideration of the social semiotics of seal use in Chapters 2 and 3 were published in “Re-Embodying Identity: Seals and Seal Impressions as Agents of Social Change on Late Prepalatial Crete,” 2013 and “Signs in Human Hands: a Model for the Intonated Object,” 2012. In 2011, I presented a paper at a conference in Heidelberg concerning the future of Minoan Archaeology that contained parts of my discussion of the social effects of travel in Prepalatial Crete; this appears in my contribution to the conference proceedings, “Connecting with Selves and Others: Varieties of Community-Making across Late Prepalatial Crete,” 2015. More generally, the ideas contained here have benefited immeasurably from the feedback of scholars at numerous conferences over the past several years.
