

The Neuroethics of Memory

The Neuroethics of Memory is a thematically integrated analysis and discussion of neuroethical questions about memory capacity and content, as well as interventions to alter it. These include: How does memory function enable agency, and how does memory dysfunction disable it? To what extent is identity based on our capacity to accurately recall the past? Could a person who becomes aware during surgery be harmed if they have no memory of the experience? How do we weigh the benefits and risks of brain implants designed to enhance, weaken or erase memory? Can a person be responsible for an action if they do not recall it? Would a victim of an assault have an obligation to retain a memory of this act, or the right to erase it? This book uses a framework informed by neuroscience, psychology and philosophy combined with actual and hypothetical cases to examine these and related questions.

WALTER GLANNON is Professor of Philosophy at the University of Calgary, Canada. He has served as a clinical ethicist at three different hospitals and has held academic appointments at McGill University and the University of British Columbia. He is the author or editor of ten books, including *Free Will and the Brain: Neuroscientific, Philosophical and Legal Perspectives* (Cambridge University Press, 2015).

Acknowledgments

I thank my editors at Cambridge University Press, Hetty Marx, Janka Romero, Emily Watton and Bethany Johnson for their advice and support. Three reviewers commissioned by the Press gave me constructive comments and suggestions on the book proposal. One of the reviewers, Nick Davis, gave me especially helpful comments on the entire manuscript. Some of the material in the book is based on previously published journal articles. I am grateful to the referees of these articles for their thoughtful reviews.

I presented some of the ideas in the book to audiences at conferences and workshops in Geneva, Halifax, Lausanne, Montreal and Muenster. For correspondence and discussion of some of the ideas in the book, I thank Jackie Andrade, Jared Craig, Andrew Davidson, Paulie Gaido, Christian Ineichen, Kate Johnson, Adam Kolber, Timothy Krahn, Jaakko Langsjo, Neil Levy, Ying-Tung Lin, Stephen Morse, Roger Pitman, Dimitris Repantis, Ulrike Rimmele, Karen Rommelfanger, Julian Savulescu, Daniel Schacter, Dominic Wilkinson, Karsten Witt, Teresa Yu and Adam Zeman.
