<i>List of Figures</i>	<i>page</i> viii
<i>Preface</i>	xi
<i>Prerequisites</i>	xv

PART I

1 Preliminaries	3
1.1 Complex Numbers	3
1.2 Estimates	6
1.3 Stereographic Projection	8
1.4 Exercises	10
2 Analytic Functions	13
2.1 Polynomials	13
2.2 Fundamental Theorem of Algebra and Partial Fractions	15
2.3 Power Series	17
2.4 Analytic Functions	20
2.5 Elementary Operations	23
2.6 Exercises	27
3 The Maximum Principle	31
3.1 The Maximum Principle	31
3.2 Local Behavior	33
3.3 Growth on \mathbb{C} and \mathbb{D}	35
3.4 Boundary Behavior	38
3.5 Exercises	41
4 Integration and Approximation	43
4.1 Integration on Curves	43
4.2 Equivalence of Analytic and Holomorphic	47
4.3 Approximation by Rational Functions	53
4.4 Exercises	60
5 Cauchy's Theorem	63
5.1 Cauchy's Theorem	63
5.2 Winding Number	64
5.3 Removable Singularities	70
5.4 Laurent Series	72

vi	Contents	
	5.5 The Argument Principle	76
	5.6 Exercises	78
6	Elementary Maps	81
	6.1 Linear Fractional Transformations	82
	6.2 Exp and Log	86
	6.3 Power Maps	87
	6.4 The Joukovski Map	89
	6.5 Trigonometric Functions	91
	6.6 Constructing Conformal Maps	93
	6.7 Exercises	98
	PART II	
7	Harmonic Functions	105
	7.1 The Mean-Value Property and the Maximum Principle	105
	7.2 Cauchy–Riemann and Laplace Equations	111
	7.3 Hadamard, Lindelöf and Harnack	114
	7.4 Exercises	118
8	Conformal Maps and Harmonic Functions	123
	8.1 The Geodesic Zipper Algorithm	123
	8.2 The Riemann Mapping Theorem	129
	8.3 Symmetry and Conformal Maps	132
	8.4 Conformal Maps to Polygonal Regions	135
	8.5 Exercises	137
9	Calculus of Residues	141
	9.1 Contour Integration and Residues	141
	9.2 Some Examples	142
	9.3 Fourier and Mellin Transforms	145
	9.4 Series via Residues	149
	9.5 Laplace and Inverse Laplace Transforms	150
	9.6 Exercises	154
10	Normal Families	156
	10.1 Normality and Equicontinuity	156
	10.2 Riemann Mapping Theorem Revisited	162
	10.3 Zalcman, Montel and Picard	164
	10.4 Exercises	168
11	Series and Products	170
	11.1 Mittag-Leffler’s Theorem	170
	11.2 Weierstrass Products	175
	11.3 Blaschke Products	181

Contents	vii
11.4 The Gamma and Zeta Functions	184
11.5 Exercises	189
PART III	
12 Conformal Maps to Jordan Regions	195
12.1 Some Badly Behaved Regions	195
12.2 Janiszewski's Lemma	197
12.3 Jordan Curve Theorem	199
12.4 Carathéodory's Theorem	201
12.5 Exercises	205
13 The Dirichlet Problem	207
13.1 Perron Process	207
13.2 Local Barriers	209
13.3 Riemann Mapping Theorem Again	212
13.4 Exercises	214
14 Riemann Surfaces	216
14.1 Analytic Continuation and Monodromy	216
14.2 Riemann Surfaces and Universal Covers	220
14.3 Deck Transformations	226
14.4 Exercises	227
15 The Uniformization Theorem	230
15.1 The Modular Function	230
15.2 Green's Function	232
15.3 Simply-Connected Riemann Surfaces	237
15.4 Classification of All Riemann Surfaces	243
15.5 Exercises	243
16 Meromorphic Functions on a Riemann Surface	246
16.1 Existence of Meromorphic Functions	246
16.2 Properly Discontinuous Groups on \mathbb{C}^* and \mathbb{C}	246
16.3 Elliptic Functions	248
16.4 Fuchsian Groups	251
16.5 Blaschke Products and Convergence Type	253
16.6 Exercises	257
<i>Appendix</i>	260
A.1 Fifteen Conditions Equivalent to Analytic	260
A.2 Program for Color Pictures	261
<i>Bibliography</i>	267
<i>Index</i>	269
