<i>Preface</i>	<i>page</i> ix
<i>Frequently Used Notation</i>	xii
<b>1 Fundamentals of Continuous Stochastic Processes</b>	<b>1</b>
1.1 Stochastic Processes	1
1.2 Wiener Space	4
1.3 Filtered Probability Space, Adapted Stochastic Process	9
1.4 Discrete Time Martingales	11
1.4.1 Conditional Expectation	11
1.4.2 Martingales, Doob Decomposition	13
1.4.3 Optional Stopping Theorem	16
1.4.4 Convergence Theorem	17
1.4.5 Optional Sampling Theorem	20
1.4.6 Doob's Inequality	22
1.5 Continuous Time Martingale	24
1.5.1 Fundamentals	24
1.5.2 Examples on the Wiener Space	25
1.5.3 Optional Sampling Theorem, Doob's Inequality, Convergence Theorem	28
1.5.4 Applications	32
1.5.5 Doob–Meyer Decomposition, Quadratic Variation Process	34
1.6 Adapted Brownian Motion	37
1.7 Cameron–Martin Theorem	40
1.8 Schilder's Theorem	43
1.9 Analogy to Path Integrals	49
<b>2 Stochastic Integrals and Itô's Formula</b>	<b>52</b>
2.1 Local Martingale	52

2.2	Stochastic Integrals	54
2.3	Itô's Formula	61
2.4	Moment Inequalities for Martingales	70
2.5	Martingale Characterization of Brownian Motion	73
2.6	Martingales with respect to Brownian Motions	82
2.7	Local Time, Itô–Tanaka Formula	87
2.8	Reflecting Brownian Motion and Skorohod Equation	93
2.9	Conformal Martingales	96
<b>3</b>	<b>Brownian Motion and the Laplacian</b>	<b>102</b>
3.1	Markov and Strong Markov Properties	102
3.2	Recurrence and Transience of Brownian Motions	108
3.3	Heat Equations	111
3.4	Non-Homogeneous Equation	112
3.5	The Feynman–Kac Formula	117
3.6	The Dirichlet Problem	125
<b>4</b>	<b>Stochastic Differential Equations</b>	<b>133</b>
4.1	Introduction: Diffusion Processes	133
4.2	Stochastic Differential Equations	138
4.3	Existence of Solutions	145
4.4	Pathwise Uniqueness	151
4.5	Martingale Problems	156
4.6	Exponential Martingales and Transformation of Drift	157
4.7	Solutions by Time Change	164
4.8	One-Dimensional Diffusion Process	167
4.9	Linear Stochastic Differential Equations	180
4.10	Stochastic Flows	183
4.11	Approximation Theorem	190
<b>5</b>	<b>Malliavin Calculus</b>	<b>195</b>
5.1	Sobolev Spaces and Differential Operators	195
5.2	Continuity of Operators	206
5.3	Characterization of Sobolev Spaces	214
5.4	Integration by Parts Formula	224
5.5	Application to Stochastic Differential Equations	232
5.6	Change of Variables Formula	244
5.7	Quadratic Forms	257
5.8	Examples of Quadratic Forms	265
5.8.1	Harmonic Oscillators	265
5.8.2	Lévy's Stochastic Area	269

*Contents*

vii

5.8.3	Sample Variance	274
5.9	Abstract Wiener Spaces and Rough Paths	276
<b>6</b>	<b>The Black–Scholes Model</b>	281
6.1	The Black–Scholes Model	281
6.2	Arbitrage Opportunity, Equivalent Martingale Measures	284
6.3	Pricing Formula	287
6.4	Greeks	293
<b>7</b>	<b>The Semiclassical Limit</b>	297
7.1	Van Vleck’s Result and Quadratic Functionals	297
7.1.1	Soliton Solutions for the KdV Equation	302
7.1.2	Euler Polynomials	307
7.2	Asymptotic Distribution of Eigenvalues	309
7.3	Semiclassical Approximation of Eigenvalues	312
7.4	Selberg’s Trace Formula on the Upper Half Plane	318
7.5	Integral of Geometric Brownian Motion and Heat Kernel on $\mathbf{H}^2$	323
<b>Appendix</b>	<b>Some Fundamentals</b>	329
	<i>References</i>	337
	<i>Index</i>	344
