1 **Introduction**
- History | 1
- Powering: Overall Concept | 3
- Improvements in Efficiency | 3
- REFERENCES (CHAPTER 1) | 5

2 **Propulsive Power**
- Components of Propulsive Power | 7
  - 2.1 Components of Propulsive Power | 7
  - 2.2 Propulsion Systems | 7
  - 2.3 Definitions | 9
  - 2.4 Components of the Ship Power Estimate | 10

3 **Components of Hull Resistance**
- Physical Components of Main Hull Resistance | 12
  - 3.1 Physical Components | 12
  - 3.1.1 Physical Components | 12
  - 3.1.2 Momentum Analysis of Flow Around Hull | 18
  - 3.1.3 Systems of Coefficients Used in Ship Powering | 21
  - 3.1.4 Measurement of Model Total Resistance | 23
  - 3.1.5 Transverse Wave Interference | 29
  - 3.1.6 Dimensional Analysis and Scaling | 33
- Other Drag Components | 37
  - 3.2.1 Appendage Drag | 37
  - 3.2.2 Air Resistance of Hull and Superstructure | 46
  - 3.2.3 Roughness and Fouling | 52
  - 3.2.4 Wind and Waves | 57
  - 3.2.5 Service Power Margins | 64
- REFERENCES (CHAPTER 3) | 65

17.9.11 Minimum Propulsive Power
17.10 Summary
18 Applications
18.1 Background
18.2 Example Applications
18.2.1 Example Application 1. Tank Test Data: Estimate of Ship Effective Power
18.2.2 Example Application 2. Model Self-Propulsion Test Analysis
18.2.3 Example Application 3. Wake Analysis from Full-Scale Trials Data
18.2.4 Example Application 4. 140 m Cargo Ship: Estimate of Effective Power
18.2.5 Example Application 5. Tanker: Estimates of Effective Power in Load and Ballast Conditions
18.2.6 Example Application 6. 8000 TEU Container Ship: Estimates of Effective and Delivered Power
18.2.7 Example Application 7. 135 m Twin-Screw Ferry, 18 knots: Estimate of Effective Power $P_E$
18.2.8 Example Application 8. 45.5 m Passenger Ferry, 37 knots, Twin-Screw Monohull: Estimates of Effective and Delivered Power
18.2.9 Example Application 9. 98 m Passenger/Car Ferry, 38 knots, Monohull: Estimates of Effective and Delivered Power
18.2.10 Example Application 10. 82 m Passenger/Car Catamaran Ferry, 36 knots: Estimates of Effective and Delivered Power 493
18.2.11 Example Application 11. 130 m Twin-Screw Warship, 28 knots, Monohull: Estimates of Effective and Delivered Power 496
18.2.12 Example Application 12. 35 m Patrol Boat, Monohull: Estimate of Effective Power 502
18.2.13 Example Application 13. 37 m Ocean-Going Tug: Estimate of Effective Power 504
18.2.14 Example Application 14. 14 m Harbour Work Boat, Monohull: Estimate of Effective Power 504
18.2.15 Example Application 15. 18 m Planing Craft, Single-Chine Hull: Estimates of Effective Power Preplaning and Planing 506
18.2.16 Example Application 16. 25 m Planing Craft, 35 knots, Single-Chine Hull: Estimate of Effective Power 509
18.2.17 Example Application 17. 10 m Yacht: Estimate of Performance 511
18.2.18 Example Application 18. Tanker: Propeller Off-Design Calculations 515
18.2.20 Example Application 20. Ship Speed Trials: Correction for Natural Wind 521
18.2.21 Example Application 21. Detailed Cavitation Check on Propeller Blade Section 522
18.2.22 Example Application 22. Estimate of Propeller Blade Root Stresses 524
18.2.23 Example Application 23. Propeller Performance Estimates Using Blade Element-Momentum Theory 525
18.2.24 Example Application 24. Wake-Adapted Propeller 527
18.2.25 Example Application 25. Patrol Class Submarine: Estimates of Effective and Delivered Power 528
18.2.26 Example Application 26. AUV: Estimates of Effective and Delivered Power 530
