<i>Preface</i>	<i>page ix</i>
<i>An Outline of the History of Spectral Spaces</i>	<i>xiii</i>
1 Spectral Spaces and Spectral Maps	1
1.1 The Definition of Spectral Spaces	2
1.2 Spectral Maps and the Category of Spectral Spaces	10
1.3 Boolean Spaces and the Constructible Topology	13
1.4 The Inverse Topology	23
1.5 Specialization and Priestley Spaces	27
1.6 Examples	36
1.7 Further Reading	46
2 Basic Constructions	48
2.1 Spectral Subspaces	49
2.2 Products of Spectral Spaces	52
2.3 Spectral Subspaces of Products	57
2.4 Finite Coproducts	64
2.5 Zariski, Real, and Other Spectra	66
3 Stone Duality	78
3.1 The Spectrum of a Bounded Distributive Lattice	79
3.2 Stone Duality	82
3.3 Spectral Spaces via Prime Ideals and Prime Filters	88
3.4 The Boolean Envelope of a Bounded Distributive Lattice	92
3.5 Inverse Spaces and Inverse Lattices	94
3.6 The Spectrum of a Totally Ordered Set	96
3.7 Further Reading	98

4	Subsets of Spectral Spaces	102
4.1	Quasi-Compact Subsets, Closure, and Generalization	103
4.2	Directed Subsets and Specialization Chains	107
4.3	Rank and Dimension	113
4.4	Minimal Points and Maximal Points	118
4.5	Convexity and Locally Closed Sets and Points	131
5	Properties of Spectral Maps	141
5.1	Images of Proconstructible Sets under Spectral Maps	142
5.2	Monomorphisms and Epimorphisms	145
5.3	Closed and Open Spectral Maps	151
5.4	Embeddings	156
5.5	Irreducible Maps and Dominant Maps	163
5.6	Extending Spectral Maps	165
6	Quotient Constructions	168
6.1	Spectral Quotients Modulo Relations	169
6.2	Saturated Relations	174
6.3	Spectral Orders and Spectral Relations	179
6.4	Quotients Modulo Equivalence Relations and Identifying Maps	186
6.5	Spectral Quotients and Lattices	197
6.6	The Space of Connected Components	199
7	Scott Topology and Coarse Lower Topology	205
7.1	When Scott is Spectral	206
7.2	Fine Coherent Posets and Complete Lattices	221
7.3	The Coarse Lower Topology on Root Systems and Forests	230
7.4	Finite and Infinite Words	239
8	Special Classes of Spectral Spaces	246
8.1	Noetherian Spaces	247
8.2	Spectral Spaces with Scattered Patch Space	261
8.3	Heyting Spaces	267
8.4	Normal Spectral Spaces	279
8.5	Spectral Root Systems and Forests	290
9	Localic Spaces	299
9.1	Frames and Completeness	300
9.2	Localic Spaces – Spectra of Frames	306
9.3	Localic Maps	311
9.4	Localic Subspaces	315
9.5	Localic Points	322

Contents

vii

10	Colimits in Spec	328
	10.1 Coproducts	329
	10.2 Fiber Sums	340
	10.3 Colimits	354
	10.4 Constructions with Fiber Sums	360
11	Relations of Spec with Other Categories	369
	11.1 The Spectral Reflection of a Topological Space	371
	11.2 The Sobrification	384
	11.3 Spectral Reflections of Continuous Maps	390
	11.4 Properties of Topological Spaces and their Spectral Reflections	393
	11.5 How Localic Spaces are Located in the Category of Spectral Spaces	402
	11.6 The Categories Spec and PoSets	408
	11.7 The Subcategory BoolSp of Spec	412
12	The Zariski Spectrum	416
	12.1 The Zariski Spectrum – Topology on the Set of Prime Ideals of a Ring	419
	12.2 Functoriality	434
	12.3 Locally Closed Points and the Nullstellensatz	442
	12.4 The Spectrum of a Noetherian Ring	450
	12.5 Zariski Spectra under Ring-Theoretic Constructions	458
	12.6 Hochster’s Results	469
13	The Real Spectrum	485
	13.1 Motivation and Elementary Examples	487
	13.2 Specialization and Maximal Points	501
	13.3 Spectral Morphisms Induced by Ring Homomorphisms	504
	13.4 Real Spectra under Ring-Theoretic Constructions	515
	13.5 The Real Spectrum in Real Algebraic Geometry	518
	13.6 Further Results and Reading	531
14	Spectral Spaces via Model Theory	540
	14.1 The Model-Theoretic Setup	541
	14.2 Spectral Spaces of Types	543
	14.3 Spectra of Structures and their Elementary Description	560

Appendix: The Poset Zoo	579
References	590
Index of Categories and Functors	607
Index of Examples	608
Symbol Index	613
Subject Index	618
