

EURASIA AT THE DAWN OF HISTORY

Our current world is characterized by life in cities, the existence of social inequalities, and increasing individualization. When and how did these phenomena arise? What was the social and economic background for the development of hierarchies and the first cities? The authors of this volume analyze the processes of centralization, cultural interaction, and social differentiation that led to the development of the first urban centres and early state formations of ancient Eurasia, from the Atlantic coasts to China. The chronological framework spans a period from the Neolithic to the Late Iron Age, with a special focus on the early first millennium BC.

By adopting an interdisciplinary approach structured around the concepts of identity and materiality, this book addresses the appearance of a range of key phenomena that continue to shape our world.

Manuel Fernández-Götz is Lecturer in Archaeology at the School of History, Classics and Archaeology of the University of Edinburgh and Executive Board Member of the European Association of Archaeologists. He has coordinated the Heuneburg Project (2011–13) and authored some 120 publications on Iron Age societies, the archaeology of identities, and the Roman conquest. Key books include *Identity and Power: The Transformation of Iron Age Societies in Northeast Gaul* (2014) and *Paths to Complexity: Centralisation and Urbanisation in Iron Age Europe* (2014). He currently directs excavations at the Iron Age Oppidum of Monte Bernorio and the Roman settlement of Huerta Varona in Northern Spain.

Dirk Krausse is Head Archaeologist at the State Office for Cultural Heritage Baden-Württemberg and Professor at the University of Tübingen. He has directed excavations at the Oppidum of Wallendorf and the ‘princely seats’ of Mont Lassois in Central France and the Heuneburg in Southern Germany. Among his books are *Hochdorf III: Das Trink- und Speiseservice aus dem späthallstattzeitlichen Fürstengrab von Eberdingen-Hochdorf* (1996) and *Eisenzeitlicher Kulturwandel und Romanisierung im Mosel-Eifel-Raum* (2006).

FIGURES

1.1	(a) A modern urban landscape: Aerial view of Chicago; (b) Early urbanism in ancient Europe: idealized reconstruction of the Heuneburg agglomeration in the sixth century BC.	<i>page</i> 4
1.2	The Hohmichele mound near the Heuneburg, one of the largest Early Iron Age tumuli in Central Europe.	5
1.3	Locations of the six areas where the ‘urban revolution’ took place independently.	12
1.4	Plan of temple A at Manching, which existed before the Late Iron Age agglomeration was founded and was, from the beginning, at its centre.	13
1.5	Materialized power: warrior statues from Northwestern Iberia. These stone sculptures express the power acquired by particular aristocratic leaders towards the end of the Iron Age and the role of the body as a privileged space for social negotiation.	16
2.1	Stone cubes from the Indus Valley civilization. Metric analysis indicates that they embody a measurement system based on mass.	25
2.2	Schematic diagram indicating aspects of human cognition.	26
2.3	Histogram suggesting the existence in Neolithic times of a unit of measure, the ‘megalithic yard’.	29
2.4	The reconstruction of Maya polities using epigraphic as well as survey data.	30
2.5	Settlement pattern in Baden-Württemberg during the Late Hallstatt period (620–450 BC), a first step towards the reconstruction of polities.	31
2.6	Grave 4 from the Copper Age cemetery at Varna, ca. 4500 BC, indicating that high value was assigned to gold.	32
2.7	Statue of warrior from the <i>Fürstensitz</i> on the Glauberg wearing jewellery like that found in the sumptuous grave.	34
2.8	Rich textiles from the princely burial at Hochdorf.	35
2.9	The rise and fall of the <i>Fürstensitze</i> , indicating principal trade routes.	36
4.1	Two sets of cognitive features.	56
4.2	Bell-Beaker ‘package’.	59
4.3	Cross-group uniformity of appearance among the European Bell-Beaker elites, from Scotland to Sicily, and from Portugal to Moravia.	61

- 5.1 Emergence and expansion of the Neolithic economy towards the Mediterranean. Three large complexes are discernable: To the east, the PPNB, founder of the system; in the center, diverse cultures of the first Greco-Anatolian Neolithic; to the west, cultures of the *impressa*/cardial complex. (The dates indicate the first events of the Neolithic in the various areas considered here). 70
- 5.2 First expansion of Neolithic pioneer groups in the Western Mediterranean from areas with archaic *impressa* ceramic of the Central Mediterranean (Southeast Italy, Sicily). The red dots represent the principal known pre-cardial sites. 73
- 5.3 The Mediterranean around 3000 BC. Egypt: First historical dynasties. Levant, Anatolia, Aegean: proto-urban or sub-urban Early Bronze Age; Central and Western Mediterranean: Final Neolithic/Chalcolithic. 75
- 5.4 *Tholos* of Los Millares (Almeria, Spain), Chalcolithic, 4th millennium BC. 76
- 5.5 Tarxien temples (Malta), 4th–3rd millennia BC. 78
- 6.1 The trajectory of settlement sizes towards low-density urbanism. 83
- 6.2 Timeline of the Trypillia–Cucuteni group. 84
- 6.3 Trypillia figurines. 86
- 6.4 (a) Settlement sizes by Trypillia phase; (b) Number of neighbourhoods by quarter, Nebelivka mega-site; (c) Spacing between assembly houses, Nebelivka mega-site; and (d) Number of structures by neighbourhood, Nebelivka mega-site. 89
- 6.5 Interpretive plan of the geophysical investigations at Nebelivka. 91
- 6.6 Preliminary partition of the Nebelivka mega-site into quarters. 94
- 6.7 Quarter K, Nebelivka mega-site. 96
- 6.8 Quarter N, Nebelivka mega-site. 97
- 7.1 Extremely high population agglomerations in European prehistory in comparison: Late Neolithic Okolište (5200–4600 BC), Chalcolithic Taljanky (3800–3600 BC) and Iron Age Heuneburg (600 BC). 108
- 7.2 Different categories for the reconstruction of population densities. 1–7 yield absolute population ranges (p/km²), the latter mostly relative values. In addition to archaeology, the fields of palaeodemography, ethnology, genetics, and ecosystem research are also involved. 110
- 7.3 Absolute population values and values for the agrarian population in Europe (a) and relative population values in Europe and the Near East (b) from 6500 to 1500 BC. Numbers indicate technological innovations and social changes described in the text. 111
- 7.4 At Late Neolithic Okolište a planned enclosure encompassed the domestic space, small longhouses existed, and a population of not less than 2,000 people was agglomerated at the site. The size of the site contrasts to what is known in general from the Late Neolithic or Early Chalcolithic of Southeast Europe. The planned layout of

- the settlement is visible in the geomagnetic survey; the contemporaneity of the houses was proved by targeted excavations. 114
- 7.5 In Late Neolithic Okolište part-time specializations within direct neighbourhoods indicate a community organized on “equal terms.” In spite of this, some economically and demographically productive households stood out. 116
- 7.6 Taljanky. (A) Interpretation of an early geophysical plot/aerial photograph of Taljanky; (B) New geophysical plan of the Frankfurt-Kiel-Kiev research project. Both the structural planning of the settlement and the huge size of contemporary structures become obvious. 117
- 7.7 A comparison between the largest settlement agglomerations in the Near East and Europe displays huge differences: Whereas in Mesopotamia cities are known already from the Early Bronze Age onwards, in most other regions comparable settlement sizes do not start until after 1500 BC. Exceptions are the Pontic Trypillian sites. 120
- 8.1 Schematic table depicting the ‘social typologies’ proposed by neo-evolutionary anthropology and some of the main alternative classifications. 134
- 9.1 Mesoamerica, showing the location of the Valley of Oaxaca. 142
- 10.1 The relationship between the functional and sociological definitions of urbanism. All “sociological” cities also fit the functional definition, whereas the converse is not true. 155
- 10.2 Royal palace at the Classic Maya city of Palenque. The two primary urban functions of Maya cities were royal administration (as signaled by palaces) and state religion (as signaled by large temples). 156
- 10.3 Two-dimensional city typologies. (A) comprehensive typology; (B) targeted typology for European cities after AD 1000. 157
- 10.4 Simplified urban typology based on social impact (urban functions). 164
- 11.1 Photos showing market activities in Timbuktu taken by L. Frobenius during his stay at Timbuktu in 1908. 177
- 12.1 Images of Montemhet, Fourth Prophet of Amun, 7th century BC. They illustrate the classicism of the period, whose formal programme draws on elements used 1,000 years earlier that were regarded as ‘classical’. 191
- 13.1 The palace-centred trade of the Late Bronze Period. 202
- 13.2 The tribe- and city-state-centred trade of the Early Iron Age Period. 202
- 13.3 The alphabet and the trade routes, ca. 750–550 BC. 203
- 14.1 Ground plan and section of grave 251 in Jinshengcun (Taiyuan, Shanxi), ca. 475–425 BC. 213
- 14.2 Ritual assemblage of grave 251 in Jinshengcun. From top to bottom and from left to right: a tripod *ding* used to cook meat, a footed cup *dou* to present food, a vessel *fanghu* for the wine, a jar *lei*

	and a bird-shaped jug designed to contain water for ablution practices.	215
14.3	Ground plan of grave 11 in Shuihudi, 217 BC.	220
15.1	Poggio Civitate (Murlo). Representation of a feast.	228
15.2	Sumptuous grave of Hochdorf. Cauldron with protomes of lions.	229
15.3	Bronze foot bowl from Hallstatt.	230
15.4	Hydria of Damon, 560–545 BC.	232
15.5	Cauldron from grave MM in Gordion.	236
16.1	The structural history model of the French Annales School.	244
16.2	Morgenroth's (2004) models of Iron Age sociopolitical transformation in Southern Iberia.	246
16.3	Terrenato's (2011) model for the rise of the Roman city-state.	247
17.1	First Phoenician contacts, 9th century BC.	256
17.2	First Phoenician colonies, ca. 800 BC.	258
17.3	Bronze statuette found in the sea near Cádiz.	259
17.4	Colonial areas (8th–7th centuries BC): (1) <i>Lixus</i> , (2) <i>Gadir</i> , (3) Cerro del Prado, (4) Cerro del Villar, (5) Toscanos, (6) Morro de Mezquitilla/Chorreras, (7) Almuñécar, (8) Villaricos, (9) Ebusus, (10) Tharros, (11) Sulcis, (12) Nora, (13) Cagliari, (14) Utica, (15) Carthage, (16) Motya, (17) Panormo, (18) Solunto, (19) Malta, and (20) Kition.	261
17.5	Eighth-century BC house from Chorreras (Málaga).	262
18.1	Distribution of major sites in Hallstatt D and La Tène A.	269
18.2	Distribution of major open settlements of La Tène B2 to D1.	271
18.3	Distribution of Late Iron Age <i>oppida</i> .	272
19.1	Distribution of 8th-century BC burials at Argos.	283
19.2	Photograph of Argos from the Argive Heraion.	287
20.1	The Ionian coast between Taras and Sybaris and its immediate hinterland.	292
20.2	Torre di Satriano: The settlement in the Second Iron Age.	293
20.3	Torre di Satriano: Apsidal building, plan (a) and reconstruction (b) of the elevation.	296
20.4	Torre di Satriano: The so-called <i>Anaktoron</i> .	297
20.5	Torre di Satriano: Greek vase forms documented in the so-called <i>Anaktoron</i> .	299
21.1	Etruria and the rank-size transformation.	305
21.2	Territory of Tarquinia.	310
21.3	Settlement and material culture in Etruria.	311
21.4	The unstable frontier between North and South Etruria.	312
21.5	The northern frontier of Perugia.	314
22.1	Centralization processes between Central Italy and Northern Germany, 8th–3rd centuries BC.	321
22.2	Symbols of political power: Mudbrick wall with towers at the Heuneburg.	324
22.3	Glauberg: Plan of the sumptuous burial 1 (right). The grave goods (centre) that correspond to features of the stone statue (left) are highlighted.	327

- 22.4 Two examples of regular settlement layouts as evidence for urban planning in the Late Hallstatt period. Top: Heuneburg, plans of the settlement during the mudbrick wall phase. Bottom: Mont Lassois, geomagnetic plan of the plateau. 330
- 22.5 Temperature curve between ca. 950–250 BC. 332
- 23.1 Monumental water basin at *Bibracte* with a topo-astronomically oriented Pythagorean layout. 339
- 23.2 Ionian-Iberian bronze of a king sacrificing a ram. Puerta del Segura, Jaén. 341
- 23.3 *Phyale* from Tivissa with two *daimones* sacrificing a ram to the ancestor. 343
- 23.4 Plan of the poliadic temple of the Founding Hero of *Térmes*, Soria. 344
- 23.5 Head of the ‘founding hero’ on Celtiberian coins transformed into the head of Augustus. 345
- 24.1 The statue from Hirschlanden. 354
- 24.2 The statue from the Glauberg. 355
- 24.3 The statues of a man and a woman from Vix ‘Les Herbues.’ 360
- 24.4 Distribution map of Late Hallstatt and Early La Tène graves with gold torques: 1. Châtonnaye, 2. Payerne, 3. Lentigny, 4. Guin, 5. Hermrigen, 6. Gunzwil-Adiswil, 7. Apremont, 8. Mercey-sur Saône, 9. Savoyeux, 10. Ensisheim, 11. Hunderingen, Giessübel-Talhau Tumulus, 12. Helpfau-Uttendorf, 13. Vix, 14. Ihringen, 15. Kappel, 16. Dusslingen, 17. Rottenburg-Baisingen, 18. Bad Cannstatt I and II, 19. Hatten, 20. Eberdingen-Hochdorf, 21. Ludwigsburg, 22. Wallerfangen, 23. Reinheim, 24. Bad Dürkheim, 25. Besseringen, 26. Waldalgesheim, and 27. Glauberg. 361
- 24.5 General distribution map of Hallstatt D1–D3 and La Tène A–B sumptuous graves (*Fürstengräber*). 365
- 25.1 The ‘golden bowl’ from Schwarzenbach in Saarland and drawings from friezes with palmette flowers. 371
- 25.2 ‘Decorative disk’ from Schwabsburg: Gold on iron and bronze, with amber and coral inlays (top); the similarly worked decorative disk from Weiskirchen (bottom). 373
- 25.3 Circular compositions drawn with a compass: Reconstructed drawing of an arrangement of stars in circles (top left); frieze from the spouted flagon from the Glauberg (centre left); stars in circles around the base of the flagon’s spout (bottom left); pattern on the front and back of the cap from the statue from the Glauberg (top right half); and decoration on the temples of the faces on the four sides of the stone stele from Pfalzfeld (bottom right half). 374
- 25.4 Plan of the ditches from tumulus 1 at the Glauberg. 377
- 25.5 Engravings on the sword sheath from grave 2 at the Glauberg. 378
- 26.1 Drawing of a bronze fibula from Panenský Týnec, Czech Republic. Length 10.2 cm. 383
- 26.2 Schematic sketch of the man buried in grave 1 at the Glauberg, showing the positions of visually complex ornaments on his

- body – earrings, neck ring, belt hook and attachments, finger ring, and scabbard. Other objects bearing complex ornaments were in the grave, but not placed on the body. 384
- 26.3 Schematic sketch of the woman buried in the Reinheim grave, showing the positions of visually complex ornaments on her body – neck ring, two fibulae, bracelets, and finger ring. 385
- 27.1 Cultural panorama of France before and at the beginning of the La Tène period. 395
- 27.2 Medio-Atlantic carinated potteries of 5th century BC from Brittany, Champagne, Belgium and Southern England. 397
- 27.3 N°1–6: Evolution of Early La Tène fibulae from their prototypes from Spain and Mediterranean France. N°7–11; Evolution of Early La Tène daggers and swords from their prototypes from the Thames Basin and the Jogassian area. Different scales. N°1–2: Tortosa (Catalonia); 3: Offaing (Belgium, prov. Luxembourg); 4: Sogny (Champagne-Ardenne); 5: Crozant (Limousin); 6: Icklingham (Suffolk); 7: Chaillon (Lorraine); 8: London; 9: Saint-Gibrien (Champagne-Ardenne); 10: Hammersmith (West London); and 11: Flaujac-Poujols (Midi-Pyrénées). 399
- 27.4 Examples of square enclosures from the Atlantic Bronze Age and Atlantic First Iron Age. Cemeteries: n°1: Tagnon (Ardennes) 11th–10th century BC; n°2: Thourotte (Picardy) 11th–10th century BC; n°3: Canchy (Picardy) early 6th century BC; n°4: Eterville (Lower Normandy) 6th century BC; n°5–6: Basly (Lower Normandy) late 7th century BC. Settlements: n°7: Nonant (Lower Normandy) 15th–14th century BC; n°8: Courseulles-sur-Mer (Lower Normandy) early 5th century BC. 401
- 27.5 Hypothetical evocation of the network genesis of the La Tène Cultures. 403
